Archeologia e Calcolatori, 32.1, 2021 Angela Bellia,2021-11-30 Il volume 32.1 è suddiviso in due parti. La prima comprende gli articoli proposti annualmente alla rivista da studiosi italiani e stranieri che illustrano ricerche archeologiche interdisciplinari in cui l'uso delle tecnologie informatiche risulta determinante per l'acquisizione, l'elaborazione e l'interpretazione dei dati. Tecniche di analisi statistica, banche dati, GIS e analisi spaziali, tecniche di rilievo tridimensionale e ricostruzioni virtuali, sistemi multimediali, contribuiscono a documentare le testimonianze del passato e a diffondere i risultati della ricerca scientifica. La seconda parte del volume contiene un inserto speciale curato da Angela Bellia e dedicato a una tematica innovativa, l'archeomusicologia, un campo di

ricerca multidisciplinare che adotta i metodi dell'archeologia per lo studio della musica e della vita musicale nel mondo antico. Gli articoli s'incentrano sul ruolo delle tecnologie digitali basate sulla modellazione 3D e sulla simulazione del suono per ampliare le conoscenze sugli strumenti musicali dell'antichità e sul prezioso, ma estremamente labile, patrimonio sonoro. Chiude il volume la sezione dedicata alle Note e recensioni.

Sport and Festival in the Ancient Greek World David Phillips,David Pritchard,2003-12-31 How did sport and festival affect the ancient Greek city? How did the values of athletics pervade Greek culture? This collection of fifteen new studies from an international cast took its inspiration from the exceptional Sydney Olympics of 2000. The focus here is on the ancient world, but additionally there is a sophisticated look at how Greek artefacts linked with sport can best be presented to the modern world.

Digital Theatre Nadja Masura,2020-10-21 Digital Theatre is a rich and varied art form evolving between performing bodies gathered together in shared space and the ever-expanding flexible reach of the digital technology that shapes our world. This book explores live theatre performances which incorporate video projection, animation, motion capture and triggering, telematics and multisite performance, robotics, VR, and AR. Through

examples from practitioners like George Coates, the Gertrude Stein Repertory Theatre, Troika Ranch, David Saltz, Mark Reaney, The Builder's Association, and ArtGrid, a picture emerges of how and why digital technology can be used to effectively create theatre productions matching the storytelling and expressive needs of today's artists and audiences. It also examines how theatre roles such as director, actor, playwright, costumes, and set are altered, and how ideas of body, place, and community are expanded.

   <u>Machining Dynamics and Parameters Process Optimization</u> Gorka Urbicain,Daniel Olvera Trejo,2021-03-19 As we move further into the 21st century, despite the fact that new technologies have emerged, machining remains the key operation to achieve high productivity and precision for high-added value parts in several sectors, but recent advances in computer applications should close the gap between simulations and industrial practices. This book, "Machining Dynamics and Parameters Process Optimization", is oriented toward the different strategies and paths when it comes to increasing productivity and reliability in metal removal processes. The topics include the dynamic characterization of machine tools, experimental dampening techniques, and optimization algorithms combined with signal monitoring.

   Mind, Body, World Michael R. W. Dawson,2013 Cognitive science arose in the 1950s when it became apparent that a number of disciplines,

including psychology, computer science, linguistics, and philosophy, were fragmenting. Perhaps owing to the field's immediate origins in cybernetics, as well as to the foundational assumption that cognition is information processing, cognitive science initially seemed more unified than psychology. However, as a result of differing interpretations of the foundational assumption and dramatically divergent views of the meaning of the term information processing, three separate schools emerged: classical cognitive science, connectionist cognitive science, and embodied cognitive science. Examples, cases, and research findings taken from the wide range of phenomena studied by cognitive scientists effectively explain and explore the relationship among the three perspectives. Intended to introduce both graduate and senior undergraduate students to the foundations of cognitive science, Mind, Body, World addresses a number of questions currently being asked by those practicing in the field: What are the core assumptions of the three different schools? What are the relationships between these different sets of core assumptions? Is there only one cognitive science, or are there many different cognitive sciences? Giving the schools equal treatment and displaying a broad and deep understanding of the field, Dawson highlights the fundamental tensions and lines of fragmentation that exist among the schools and provides a refreshing and unifying framework for students of cognitive science.Michael R. W. Dawson is a professor of psychology at the University of Alberta. He is the author of numerous scientific

papers as well as the books Understanding Cognitive Science (1998), Minds and Machines (2004), Connectionism: A Hands-on Approach (2005), and From Bricks to Brains: The Embodied Cognitive Science of LEGO Robots (2010).

  Error, Ambiguity, and Creativity Sita Popat,Sarah Whatley,2020-06-30 This book offers a set of eleven discipline-specific chapters from across the arts, humanities, psychology, and medicine. Each contributor considers the creative potential of error and/or ambiguity, defining these terms in the particular context of that discipline and exploring their values and applications. Themes include error in choreography, poetry, media art, healthcare, psychology, critical typography and mixed reality performance. The book emerges from a core question

of how dance research and HCI can inform each other through consideration of error, ambiguity and 'messiness' as methodological tools. The digital age had heralded the possibility that error could be eradicated by the logic of computers but several chapters focus on glitch in arts practices that exploit errors in computer programmes, or even create programmes specifically to produce errors. Together, the chapters explore how error can take us somewhere different or somewhere new, to develop a new, more interesting way of working.

  Music and the Forms of Life Lawrence Kramer,2022-10-04 Inventors in the age of the Enlightenment created lifelike androids capable of playing music on real instruments. Music and the Forms of Life examines the link between such simulated life and music, which began in the era's scientific literature and extended into a series of famous musical works by Haydn, Mozart, and Beethoven. Music invented auditory metaphors for the scientific elements of life (drive, pulse, sensibility, irritability, even metabolism), investigated the affinities and antagonisms between life and mechanism, and explored questions of whether and how mechanisms can come to life. The resulting changes in the conceptions of both life and music had wide cultural resonance at the time, and those concepts continued to evolve long after. A critical part of that evolution was a nineteenth-century shift in focus from moving androids to the projection of life in motion, culminating in the invention of cinema. Weaving together cultural and musical practices, Lawrence

Kramer traces these developments through a collection of case studies ranging from classical symphonies to modernist projections of waltzing specters by Mahler and Ravel to a novel linking Bach's Goldberg Variations to the genetic code.
