The Effects of Interacting with a Computer-simulated Virtual Pet Dog on Children's Empathy and Humane Attitudes Yueh-Feng (Lily) Tsai,2008 Research has shown that children's caring for, or owning, a real pet animal is associated with higher levels of empathy and more positive attitudes toward the humane treatment of animals. However, studies that have examined whether a virtual pet animal would have similar associations are quite limited. With the growing sophistication of computer-based games such as Nintendogs, it becomes important to determine the socio-emotional effects of virtual pets. The purpose of this research was to investigate whether playing with and caring for a virtual pet dog would improve empathy and humane attitudes, and whether these outcomes would be related to children's sex, play type and duration, and companion bonding. The sample comprised 51 students in grades 4 and 5 from a multicultural, working class, neighborhood school in Surrey, British Columbia. Although 78 percent were from a non-English culture, all communicated satisfactorily in English. A repeated measures design was used in this study and consisted of: (1) a first pretest followed by three weeks with no intervention,(2) a second pretest followed by a three week intervention with Nintendogs, and (3) a posttest. The students also completed a weekly log and were interviewed after the intervention. The instruments used were: (1) Bryant Index of Empathy, (2) Intermediate Attitude Scale, and (#) Companion Animal Bonding Revised Scale. Quantitative findings revealed thta empathy and humane attitude posttest scores significantly increased, with females scoring higher on pretest and posttest. Also, students who developed stronger companion bonds tended to have higher empathy scores, and that play and care were positively correlated with humane attitude scores. Qualitative analysis of semi-structured interviews revealed that most students formed an emotional bond with their virtual pet dog, believing it possessed emotions, needs and interests. Play type and duration by females and males were similar. The research results suggest that playing with and caring for a virtual pet dog may promote empathy and humane attitudes, and that children's sex and play type and duration are related to empathy and attitude. Further research should be conducted with an independent control group and a larger sample to better understand the socio-emotional effects of virtual pets on children.

Are Rabbits the Right Pet for You Emma Milne,2015 Owning a pet is a big commitment that lasts for years. Children and parents often don't think about the practical and financial aspects of pet ownership, such as providing sufficient housing and protection, paying for veterinary fees, pet insurance, etc. In a fun and authoritative way, Are Rabbits the Right Pet for You? encourages responsible pet ownership from a young age, outlining the needs of rabbits and the responsibilities of pet owners. The book allows readers to investigate and work out whether a pet rabbit is right for them based on its needs and, if not, identify which pet is a more
