**Virus Taxonomy** International Committee on Taxonomy of Viruses, Andrew MQ King, 2011-10-25

The practical need to partition the world of viruses into distinguishable, universally agreed upon entities is the ultimate justification for developing a virus classification system. Since 1971, the International Committee on Taxonomy of Viruses (ICTV) operating on behalf of the world community of virologists has taken on the task of developing a single, universal taxonomic scheme for all viruses infecting animals (vertebrate, invertebrates, and protozoa), plants (higher plants and algae), fungi, bacteria, and archaea. The current report builds on the accumulated taxonomic construction of the eight previous reports dating back to 1971 and records the proceedings of the Committee since publication of the last report in 2005. Representing the work of more than 500 virologists worldwide, this report is the authoritative reference for virus organization, distinction, and structure.

*Virus Taxonomy* Claude M. Fauquet, M.A. Mayo, J. Maniloff, U. Desselberger, L.A. Ball, 2005-07-15  
Virus Taxonomy is a standard and comprehensive source for the classification of viruses, created by the International Committee of the Taxonomy of Viruses. The book includes eight taxonomic reports of the ICTV and provides comprehensive information on 3 taxonomic orders of viruses, 73 families, 9 subfamilies, 287 genera, and 1938 virus species. The book also features about 429 colored pictures and diagrams for more efficient learning. The text is divided into four parts, comprised of 16 chapters and presenting the following features: • Compiled data from numerous international experts about virus taxonomy and nomenclature • Organized information on over 6000 recognized viruses, illustrated with diagrams of genome organization and virus replication cycle • Data on the phylogenetic relationships among viruses of the same and different taxa • Discussion of the qualitative and quantitative relationships of virus sequences The book is a definitive reference for microbiologists, molecular biologists, research-level virologists, infectious disease specialists, and pharmaceutical researchers working on antiviral agents. Students and novices in taxonomy and nomenclature will also find this text useful. \* The standard official ITCV reference for virus taxonomy and nomenclature, compiling data from 500 international experts \* Covers over 6000 recognized viruses, organized by family with diagrams of genome organization and virus replication cycle \* Provides data on the phylogenetic relationships between viruses belonging to the same or different taxa \* Now includes information about the qualitative and quantitative relationships between virus sequences

*Viral Hepatitis in Children* Mei-Hwei Chang, Kathleen B. Schwarz, 2019-07-15 This book is aimed to emphasize the rationale and importance of prevention and management of viral hepatitis in

children, providing cutting edge knowledge. Viral hepatitis is a major health problem in the world. Although most complications of viral hepatitis are observed in adults, primary infection with hepatitis viruses often occurs during infancy or childhood. To better control viral hepatitis, prevention and therapy if possible should be started in childhood. This book offers updated and unique information about viral hepatitis in children, which has vitally important impact on global disease outcome and control, yet not discussed as frequently as viral hepatitis in adults in previous medical literature. Better prevention and management strategies are covered, starting from infancy and childhood, and even earlier during fetal life. It will be very helpful for better control of viral hepatitis both for daily practice and for developing future strategies and directions. If we can successfully control viral hepatitis in children, there will be very little remaining chronic hepatitis and related complications such as liver cirrhosis or hepatoma in adults. We hope readers, including medical students, researchers, pediatricians, family medicine physicians, infectious disease personnel, public health workers, gastroenterologists, hepatologists and parents of children with chronic hepatitis, will be benefited by reading this book.

The Last Roll I X Pater, 2020-09-11 Something's off about how Commander Cortez and his Quarantine Force are locking down all of Chicagoland. What is it about this mysterious new virus strain? Is it as dangerous as the authorities say? Med school dropout turned teacher, John Robinson didn't wait to find out. He sent his wife and kids out of town just before the lockdown fell, but now he's stuck separated from his family. What's worse, his daughter's experimental medicine is with him on the wrong side of the quarantine border. When a visit to his favorite sushi restaurant turns into a

series of unlikely opportunities, John starts to believe he might just get one of those coveted Travel Permits. Now, if only he can figure out why Commander Cortez seems to be running a government conspiracy to wreck John's life. Will this heroic dad find a way to reunite with his wife and kids? Will he find out what's really going on with the virus? Or, will Commander Cortez crush him with his masked Quarantine Force troopers? From *The Last Roll*: Chef Hiro lifted a round plate up over the counter and handed it to Georgia. She was speechless. The circular plate had a spider web drawn in brown unagi sauce. Around the outside, pieces of the roll were lying flat, crowned with little piles of tobiko, slices of avocado, and drizzles of sauces. The center of the web had the two end pieces nestled in white threads of daikon radish. The soft shell crab's claws and legs jutting up out of them. Highlights of the sauces and tobiko glittered like emeralds. Georgia stumbled over her words. I... I can't eat this. This is art! John tore his eyes away from his new boss's beautiful sushi. He had to see what the Quarantine Force Press Conference was saying. Up on the flat screen, a map replaced Commander Cortez's face. Huge swathes of the city were now labeled Full Lockdown. People there could only go to the grocery store, pharmacy, or doctor. That was, until the QF Commander decided otherwise. Hiro gave a low whistle at the television. He just lock up two million people? Just like that? John was stunned. This was definitely a bad sign for him getting a travel permit out of the quarantine zone to his family. Could he do that out here? Could he lockdown the suburbs too? Hiro looked at John very seriously. What stop him? Only limit on Commander is border of Quarantine Zone, right?

*Virus* Sakyō Komatsu, 2012-12-04 A mysterious virus wipes out all of humanity, save for researchers in the frigid Antarctic. To save what is left of the world from nuclear destruction, the scientists must find a way to return to America. In this classic of Japanese SF from 1964, American

astronauts on a space mission discover a strange virus and bring it to Earth, where rogue scientists transform it into a fatal version of the flu. After the virulent virus is released, nearly all human life on Earth is wiped out save for just ten thousand men and a handful of women living in research stations in Antarctica. Then one of the researchers realizes that a major earthquake in the now-depopulated United States may lead to nuclear Armageddon... The Springer Index of Viruses Christian Tidona, Gholamreza Darai, 2011-10-13 The continuous growth of knowledge makes it very difficult for scientists to retrieve comprehensive and accurate data on viruses. The desired information is often dispersed in a variety of books, journals and online resources. This encyclopedia presents the latest facts about all known viruses in a standardized form created by hundreds of the world's leading virologists. Virus taxonomy represents the basic framework that allows an understanding of the complex evolutionary process that continuously takes place among viruses and their hosts. Each of the 300 taxonomically ordered chapters includes detailed information on individual genus members, historical events, the hosts they can affect (animal, man or plant), virion morphology, genome properties, replication strategy, properties of individual transcripts and proteins, sequence accession numbers, biological properties, diseases, recombinant vector constructs, vaccine strains, key references, as well as a high-resolution particle

image and a drawing of the genome organization. Its high content of easily accessible detailed information makes this Encyclopedia an indispensable tool for both researchers and lecturers. The Hepatitis E Virus Harry Dalton, 2019-02-28 This volume is an account of scientific discovery related to the hepatitis E virus (HEV). HEV was first identified in Afghanistan in 1982 by a remarkably courageous act of self-experimentation by a Russian scientist. Following this, it was

found that, in some developing countries in Asia and Africa, HEV was the cause of enormous outbreaks of hepatitis spread by infected drinking water, with a 25% death rate in pregnant women. For many years, HEV was thought not to be an issue in high-income countries and was only seen in travellers returning from high risk areas: it was considered a “back-packers’” disease. We now know that this was hopelessly wrong as HEV is very common in developed countries, with currently over 2 million infections per year in Europe. Here, HEV is found in pigs and spread mainly via consumption of contaminated pork meat. There has been a major increase in cases of HEV in many developed countries, including patients who have suffered liver failure, some of whom have died. We now know that HEV can also cause severe damage to the nervous system. This book describes an English doctor’s contribution to the discovery of the impact of HEV in humans. Recent cases in the UK appear to have originated from pigs in Continental Europe and HEV was, as a consequence, dubbed by the international press as the ‘Brexit Virus’; perhaps an early leaving present from our friends in the EU. Accessible to lay readers, the text includes case histories and stories from a health service increasingly under pressure and given context by examples of medical discoveries from the past. The role of the meat production industry, including questionable on-going high-risk virological practices, is put under the spotlight, leading to inevitable comparisons with the BSE crisis of the 1980s. HEV continues to exact a heavy toll in some low-income countries, most notably with multiple large outbreaks in African refugee camps. Despite the best efforts of organisations such as Médecins Sans Frontières, each year, pregnant women continue to die by the score. This is particularly poignant as these deaths may be avoidable, as there is a safe and effective vaccine. However, the HEV vaccine is only licensed for use in China, and, so far, efforts to introduce it to Africa have hit a brick wall of politics and red tape.
