Decoupling direct payments in North Macedonia Weber, R.,Díaz González, A.M.,Morales Opazo, C.,2023-04-06 North Macedonia's ambition to join the European Union requires reforms of the agricultural sector and subsidy system. One major reform is the alignment to the rules of the Common Agricultural Policy (CAP) of the European Union on direct payments, including the "decoupling" of direct payments from production quantities. The decoupling of direct payments is likely to have significant impacts on production decisions, prices and therefore on farmer income. This paper identifies four possible scenarios for North Macedonia to align the direct payment scheme to the regulations of the European Union and subsequently analyses the impact of each scenario on farmer income, using an ex ante analysis method in the form of a static microsimulation approach and the farm accountancy data network (FADN) data at individual farm level. The results show that, on average, farmer income increases when direct payments are decoupled in North Macedonia. We further test for heterogeneity and identify different effects along farm types and economic farm size – and find that some farmers would exhibit income losses as a result of the reform (i.e. specialist cattle, mixed crops and livestock farmers). The document was developed as a key deliverable in the context of TCP/MCD/3703 "Strengthening of Agriculture and Rural Development Policy Analysis and Programming".

From Discrete to Continuous K. Neal,2013-06-29 In the early modern period, a crucial transformation occurred in the classical conception of number and magnitude. Traditionally, numbers were merely collections of discrete units that measured some multiple. Magnitude, on the other hand, was usually described as being continuous, or being divisible into parts that are infinitely divisible. This traditional idea of discrete number versus continuous magnitude was challenged in the early modern period in several ways. This detailed study explores how the development of algebraic symbolism, logarithms, and the growing practical demands for an expanded number concept all contributed to a broadening of the number concept in early modern England. An interest in solving practical problems was not, in itself, enough to cause a generalisation of the number concept. It was the combined impact of novel practical applications together with the concomitant development of such mathematical advances as algebraic notation and logarithms that produced a broadened number concept.
