The Chemistry Between Us Larry Young PhD,Brian Alexander,2014-01-28 How much control do we have over love? Much less than we like to think. All that mystery, all that poetry, all those complex behaviors surrounding human bonding leading to the most life-changing decisions we'll ever make, are unconsciously driven by a few molecules in our brains. How does love begin? How can two strangers come to the conclusion that it would not only be pleasant to share their lives, but that they must share them? How can a man say he loves his wife, yet still cheat on her? Why do others stay in relationships even after the romance fades? How is it possible to fall in love with the "wrong" person? How do people come to have a "type"? Physical attraction, jealousy, infidelity, mother-infant bonding—all the behaviors that so often leave us befuddled—are now being teased out of the fog of mystery thanks to today's social neuroscience. Larry Young, one of the world's leading experts in the field, and journalist Brian Alexander explain how those findings apply to you. Drawing on real human stories and research from labs around the world, *The Chemistry Between Us* is a bold attempt to create a "grand unified theory" of love. Some of the mind-blowing insights include: Love can get such a grip on us because it is, literally, an addiction. To a woman falling in love, a man is like her baby. Why it's false to say society makes gender, and how it's possible to have the body of one gender and the brain of another. Why some people are more likely to cheat than others. Why we sometimes truly can't resist temptation. Young and Alexander place their revelations into historical, political, and social contexts. In the process, they touch on everything from gay marriage to why single-mother households might not be good for society. *The Chemistry Between Us* offers powerful insights into love, sex, gender, sexual orientation, and family life that will prove to be enlightening, controversial, and thought provoking.

Routledge Handbook of the South China Sea Zou Keyuan,2021-06-28 The Routledge Handbook of the South China Sea presents a comprehensive and in-depth analysis of South China Sea issues. It evaluates the dynamics of the latest developments and identifies factors that contribute to dispute settlement and a cooperative management regime of one of the most important seas in the world – one which not only contains rich marine resources and distinctive biodiversity but is also a critical sea route for global trade and communications. The Handbook is divided into six parts, each representing a focused area of enquiry: • History and geostrategic landscape • Sovereignty and maritime entitlements • South China Sea policies of major claimants • Natural resources and environment • Cooperation and institutions • Challenges and prospects Written by world-renowned experts and scholars, with specialisms from geography to international law, the volume's 25 chapters contribute interdisciplinary perspectives, reflecting the impact of how South China Sea policies are shaped by national governments and international organizations. As such, the Handbook provides an authoritative reference to South China Sea Studies, useful for students and scholars of international relations, history, maritime and Asian studies.

Plea Negotiations Asher Flynn,Arie Freiberg,2018-07-24 Despite a popular view that trials are the focal point of the criminal justice process, in reality, the most frequent way a criminal matter resolves is not through a fiercely fought battle between state and defendant, but instead through a process of negotiation between the prosecution and defence, resulting in a defendant pleading guilty in exchange for agreed concessions from the prosecution. This book presents an original empirical case-study of plea negotiations drawing upon interviews with legal actors and an analysis of defence practitioner case files, to shine light on the processes and ways in which an agreed outcome is reached in criminal prosecutions, within the setting of a jurisdiction, like many others world-wide, which is suffering major shifts in state resources. Plea negotiations, also referred to as "plea bargaining", "negotiated guilty pleas" and "negotiated resolutions" are neither an alloyed benefit nor a detriment for defendants, victims or the criminal justice system generally, and like all compromises, this book shows how the perfect "justice" outcome gives way to the good, or just the reasonably acceptable justice outcome.

Toward A More Balanced Approach: Rethinking and Readjusting Copyright Systems in the Digital Network Era Jerry Jie Hua,2014-07-14 Based on comparative research concerning both international conventions and laws, regulations, policies and cases from different jurisdictions, this book puts forward proposals for recovering the balance of interests between copyright holders, technological intermediaries and public users with regard to the access to, distribution and exploitation of copyright works. Four specific issues are discussed in detail: • an anti-circumvention rule for protection of technological measures that control access to copyright material; • indirect infringing liability for internet service providers and safe harbor regulations, which influence the dissemination of copyright works; • copyright limitations and exceptions especially under the digital network environment, which are relevant to the extent that users are allowed to exploit copyright works; • digital commons projects that promote the distribution and adaptation of copyright works placed under voluntary license schemes, which are relevant to the tolerance and encouragement of remix culture.

Growing the Productivity of Government Services Patrick Dunleavy,Leandro Carrera,2013-01-01 'Carrera and Dunleavy provide a crystal clear and comprehensive account of the complex issues involved in how best to improve the productivity of government services. They offer a nuanced but powerful explanation of productivity puzzles, conundrums and dilemmas in the public sector. But they also offer solutions to many of these problems. Finally, I have found a text on public economics that makes sense, gives genuine management insights and offers real suggestions to practitioners as to what to do next.' – Barry Quirk, Chief Executive, London Borough of Lewisham, UK 'This book presents a welcome and sobering analysis of productivity performance in UK central government – a subject that has received remarkably little serious academic attention up to now, in spite of decades of general commentary on managerialism.' – Christopher Hood, All Souls College, UK 'Leandro Carrera and Patrick Dunleavy have performed an amazing feat in this book through their rigorous examination of a thorny topic that has dogged pundits and academics alike. Just how efficient is government and how well does it do its job? As a result of an impressive – but accessible – set of data analyses, the authors make an authoritative

attack on the proponents of the New Public Management, and offer some clear recommendations for reform based on better use of new technology.' – Peter John, University College London, UK Productivity is essentially the ratio of an organization's outputs divided by its inputs. For many years it was treated as always being static in government agencies. In fact productivity in government services should be rising rapidly as a result of digital changes and new management approaches, and it has done so in some agencies. However, Dunleavy and Carrera show for the first time how complex are the factors affecting productivity growth in government organizations – especially management practices, use of IT, organizational culture, strategic mis-decisions and political and policy churn. With government budgets under stress in many countries, this pioneering book shows academics, analysts and officials how to measure outputs and productivity in detail; how to cope with problems of quality variations; and how to achieve year-on-year, sustainable improvements in the efficiency of government services.

Senti-NSetPSO: large-sized document-level sentiment analysis using Neutrosophic Set and particle swarm optimization Amita Jain, Basanti Pal Nandi, Charu Gupta, Devendra Kumar Tayal, In the last decade, opinion mining has been explored by using various machine learning methods. In the literature, document-level sentiment analysis has been majorly dealt with short-sized text only. For large-sized text, document-level sentiment analysis has never been dealt. In this paper, a hybrid framework named as ‘‘Senti-NSetPSO’’ is proposed to analyse large-sized text. Senti-NSetPSO comprises of two classifiers: binary and ternary based on hybridization of particle swarm optimization (PSO) with Neutrosophic Set. This method is suitable to classify large-sized text having more than 25 kb of size. Swarm size generated from large text can give a suitable measurement for implementation of PSO convergence. The proposed approach is trained and tested for large-sized text collected from Blitzer, aclIMDb, Polarity and Subjective Dataset. The proposed method establishes a co-relation between sentiment analysis and Neutrosophic Set. On Blitzer, aclIMDb and Polarity dataset, the model acquires satisfactory accuracy by ternary classifier. The accuracy of ternary classifier of the proposed framework shows significant improvement than review paper classifier present in the literature.

Fluvial-Tidal Sedimentology, 2015-11-26 Fluvial-Tidal Sedimentology provides information on the ‘Tidal-Fluvial Transition’, the transition zone between river and tidal environments, and includes contributions that address some of the most fundamental research questions, including how the morphology of the tidal-fluvial transition zone evolves over short (days) and long (decadal) time periods and for different tidal and fluvial regimes, the structure of the river flow as it varies in its magnitude over tidal currents and how this changes at the mixing interface between fresh and saline water and at the turbidity maximum, the role of suspended sediment in controlling bathymetric change and bar growth and the role of fine-grained sediment (muds and flocs), whether it is possible to differentiate between ‘fluvial’ and ‘tidally’ influenced bedforms as preserved in bars and within the adjacent floodplain and what are the diagnostic sedimentary facies of tidal-fluvial deposits and how are these different from ‘pure’ fluvial and tidal deposits, amongst other topics. The book presents the latest research on the processes and deposits of the tidal-fluvial transition, documenting recent major field programs that have quantified the flow, sediment transport, and bed morphology in tidal-fluvial zones. It uses description of contemporary environments and ancient outcrop analogues to characterize the facies change through the tidal-fluvial transition. Presents the latest outcomes from recent, large, integrated field programs in estuaries around the world Gives detailed field descriptions (outcrop, borehole, core, contemporary sediments) of tidal-fluvial deposits Accesses new models and validation datasets for estuarine processes and deposits Presents descriptions of contemporary environments and ancient outcrop analogues to characterize the facies change through the tidal-fluvial transition
