The Voice Catchers Joseph Turow, 2021-05-18 Your voice as biometric data, and how marketers are using it to manipulate you Only three decades ago, it was inconceivable that virtually entire populations would be carrying around wireless phones wherever they went, or that peoples' exact locations could be tracked by those devices. We now take both for granted. Even just a decade ago the idea that individuals' voices could be used to identify and draw inferences about them as they shopped or interacted with retailers seemed like something out of a science fiction novel. Yet a new business sector is emerging to do exactly that. The first in-depth examination of the voice intelligence industry, The Voice Catchers exposes how artificial intelligence is enabling personalized marketing and discrimination through voice analysis. Amazon and Google have numerous patents pertaining to voice profiling, and even now their smart speakers are extracting and using voice prints for identification and more. Customer service centers are already approaching every caller based on what they conclude a caller's voice reveals about that person's emotions, sentiments, and personality, often in real time. In fact, many scientists believe that a person's weight, height, age, and race, not to mention any illnesses they may have, can also be identified from the sound of that individual's voice. Ultimately not only marketers, but also politicians and governments, may use voice profiling to infer personal characteristics for selfish interests and not for the benefit of a citizen or of society as a whole. Leading communications scholar Joseph Turow places the voice intelligence industry in historical perspective, explores its contemporary developments, and offers a clarion call for regulating this rising surveillance regime.

Voice Search Marketing. Strategies for the successful use of digital voice assistants Patricia Gomes Fernandes, 2021-09-08 The application of digital voice assistants has been spreading in the US since 2015. In Germany, about one third of the population between the ages of 17 and 69 used such a tool in 2017. This not only creates new opportunities but also new challenges for businesses as the results of a voice search often

only deliver a single result. How can businesses ensure the visibility of their product or brand regardless? According to Patricia Gomes Fernandes, dealers particularly fear that voice assistants don't play advertisements. For this reason, she explains how businesses best use applications for digital voice assistants. She offers recommendations for producers and dealers and shows how they can have voice assistants like Alexa present their products.
