*Civil War Washington* Susan C. Lawrence, 2015-04-01 While it is impossible to re-create the tumultuous Washington DC of the Civil War, *Civil War Washington* sets out to examine the nation's capital during the Civil War along with the digital platform ([civilwardc.org](http://civilwardc.org)) that reimagines it during those turbulent years. Among the many topics covered in the volume is the federal government's experiment in compensated emancipation, which went into effect when all of the capital's slaves were freed in April 1862. Another essay explores the city's place as a major center of military hospitals, patients, and medical administration. Other contributors reflect on literature and the war, particularly on the poetry published in hospital newspapers and Walt Whitman's formative experiences with the city and its wounded. The digital project associated with this book offers a virtual examination of the nation's capital from multiple perspectives. Through a collection of datasets, visual works, texts, and maps, the digital

project offers a case study of the social, political, cultural, and scientific transitions provoked or accelerated by the Civil War. The book also provides insights into the complex and ever-shifting nature of ongoing digital projects while encouraging others to develop their own interpretations and participate in the larger endeavor of digital history.

**Global Mapping of Human Settlement** Paolo Gamba, Martin Herold, 2009-06-23 The use of remote sensors for human settlement mapping and monitoring holds great promise for numerous fields of study, including urban planning and global environmental change and sustainability. While the potential for this technology is difficult to measure, achieving useful results at a regional or global level is but a recent accomplishment. G

**Enhancing the Resilience of the Nation's Electricity System** National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Enhancing the Resilience of the Nation's Electric Power Transmission and Distribution System, 2017-10-25 Americans' safety, productivity, comfort, and convenience depend on the reliable supply of electric power. The electric power system is a complex cyber-physical system composed of a network of millions of components spread out across the continent. These components are owned, operated, and regulated by thousands of different entities. Power system operators work hard to assure safe and reliable service, but large outages occasionally happen. Given the nature of the system, there is simply no way that outages can be completely avoided, no matter how much time and money is devoted to such an effort. The system's reliability and resilience can be improved but never made perfect. Thus, system owners, operators, and regulators must prioritize their investments based on potential benefits. Enhancing the Resilience of the Nation's Electricity System focuses on identifying, developing, and implementing strategies to increase the power system's resilience in the face of events that can cause large-area, long-duration outages: blackouts that extend over multiple service areas and last several days or longer. Resilience is not just about lessening the likelihood that these outages will occur. It is also about limiting the scope and impact of outages when they do occur, restoring power rapidly afterwards, and learning from these experiences to better deal with events in the future.

**Social, Cultural, and Behavioral Modeling** Kevin S. Xu, David Reitter, Dongwon Lee, Nathaniel Osgood, 2016-06-16 This book constitutes the refereed proceedings of the 9th International Conference on Social, Cultural, and Behavioral Modeling & Prediction and Behavior Representation in Modeling and Simulation, SBP-BRiMS 2016, held in Washington, DC, USA, in June/July 2016. The 38 full papers presented were carefully reviewed and selected from 78 submissions. The goal of this conference was to build a new community of social cyber scholars by bringing together and fostering interaction between members of the scientific, corporate, government and military communities interested in understanding, forecasting and impacting human socio-cultural behavior. For this three challenges have to be met: deep understanding, socio-cognitive reasoning, and re-usable computational technology. Thus papers come from a wide number of disciplines: computer science, psychology, sociology, communication science, public health,

bioinformatics, political science, and organizational science.
