Water Technology in the Middle Ages Roberta J. Magnusson, 2003-04-01 Focusing attention on gravity-fed water-flow systems in medieval cities and monasteries, *Water Technology in the Middle Ages: Cities, Monasteries, and Waterworks* after the Roman Empire challenges the view that hydraulic engineering died with the Romans and remained moribund until the Renaissance. Roberta Magnusson explores the systems' technologies—how they worked, what uses the water served—and also the social rifts that created struggles over access to this basic necessity. Mindful of theoretical questions about what hastens technological change and how society and technology mutually influence one another, the author supplies a thoughtful and instructive study. Archeological, historical, and literary evidence vividly depicts those who designed, constructed, and used medieval water systems and demonstrates a shift from a public-administrative to a private-innovative framework—one that argues for the importance of local initiatives. The following chapters attempt to chart a course

between the Scylla and Charybdis of technological and social determinism. While writing them, I have tried to strike a balance between the technical and human aspects of medieval hydraulic systems, and to remember that beneath the welter of documents and diffusion patterns, configurations and components, ordinances and expenditures, lie the perceptions, the choices, and often the plain hard work of individual men and women. –from the Preface

Water Planet Camille Gaskin-Reyes, 2016-10-24
Through case studies, opposing viewpoints, and primary documents, this reference work examines the environmental and sustainability issues regarding water as well as how water is an intrinsic part of human culture. Every culture and ecosystem on earth depends on water. As the world's climate changes, human culture is increasingly threatened by the seemingly opposite problems of having too little clean, potable water and having too much water—e.g., flooding, melting polar ice caps, and rising sea levels. What are the solutions that humanity must collectively pursue to protect our ability to flourish on planet earth? **Water Planet: The Culture, Politics, Economics, and Sustainability of Water on Earth** offers an unprecedented examination of the critical subject of water sustainability. Its essays, viewpoints, case studies, and documents show how this vital resource that many in first-world countries take for granted is intricately woven into not only basic human survival but also

cultural, political, and economic stability. Readers will learn about topics such as flooding and drought; the growing problem of water pollution; the connections between water and gender, including gender equity and gender aspects of water ownership; the effects of global temperature changes on the water supply; concerns regarding fishing and overfishing; water security; and sustainable water management.

Metropolitan Water Use Conflicts In Asia And The Pacific James E. Nickum,2019-03-12 Although Asia is the least urbanized continent, it contains half of the world's megacities and many of the world's fastest-growing economies. Urban growth is already stressing local water supplies and causing intense conflict among water users—between haves and have-nots in urban areas as well as between farmers and fishers outside the cities. In addition, concern is growing over the depletion and degradation of water sources and over the impact of water policies and patterns of water use on the natural environment. From the perspective of the maturing metropolitan water economy, the contributors to this volume consider the problems of urban water management in the region. They focus on the institutional and policy dimensions of conflict and seek to provide a range of viable options for reducing the growing frictions among water users. Eight specific case studies of urban areas in Asia and the Pacific span a wide range of economic

levels of development, physical settings, and hydrological conditions. The book will be of interest to scholars and policymakers concerned with issues of water and environmental policy, urban management, and resource conflict in general.

Corporate Water Strategies William

Sarni, 2012-05-23 In the past businesses have viewed water as a minimal operational cost and not a strategic issue. However, water has now emerged as a critical issue for both corporations and the public sector in response to increased water demand, climatic risks and potentially negative impacts on brand value. This innovative book provides up to date information on global water issues and describes how companies can not only address these challenges but also implement high value global water strategies. It shows: Why water is a critical business issue for companies which now face water risk to their operations and brands; How new concepts such as embedded water and virtual water are forcing companies to think differently about how they use water to manufacture products; That companies need to develop a corporate water strategy to manage it as a key business issue and capture the real value of water; How companies can develop partnerships with non-governmental organizations to implement water strategies

Water Politics and Political Culture Onur

Oktem, 2015-10-19 This book presents an analysis of the main traits of the Turkish political culture and articulates some of the most important deeply embedded social qualifications of political life

in Turkey. It reveals that when water management is historically and socially shaped by heavily technical knowledge systems of engineering it becomes a particularly useful tool for various political interests. The book analyses how Turkish freshwater management is socially constructed as both an engineering discourse and a paternalistic bureaucratic transaction. Such a construction stands in stark contrast to the water management discourse of the European Water Framework Directive (WFD), the European Union's common water policy. Of all the issues faced in Turkish water management, none are as important and problematic as the issue of complying with European Union (EU) accession criteria. Not only is water socially, economically and environmentally important; its water management is a useful prism through which the EU accession process can be viewed as a whole. It showcases the complementarities and divergences between Turkish and EU bureaucratic constructs and value systems.

Dacca Sharif Uddin Ahmed, 2018-01-12 Originally published in 1986, this work discusses the development in Dacca of western-style municipal organization and its financial and practical problems and also explores the economic transition of the city after 1840. It is one of the few urban studies which carries through from the 'old order' to the new administrative towns of British rule and attempts to show what happened to the communities of townsmen in the period of adaptation. It casts new light on the function and organization of Indian urban societies in the colonial period, on the transfer of western institutions and the organization and composition of Bengali trade outside Calcutta.
