Mental Wellness Practices Jean Pelser,2021-04-04 Since the COVID-19 pandemic outbreak, I have embarked on a mission to identify simple everyday practices that can enhance our mental health and resilience during these challenging times. Through an exploratory, critical, and investigative approach, I have found several practices that truly work to improve our mental wellness. These practices are not particularly complex and are often taken for granted, such as getting enough sleep, reducing screen time, keeping a tidy home, and connecting with our weak-tie support network. While there may be more extraordinary wellness practices available, it is surprising how the ordinary practices that we tend to overlook can keep us mentally strong and integrated.

One moment they are having a birthday barbecue with friends, the next catastrophe strikes in natural disasters. Two Ekahna, universal balance guardians, appear saying Earth nears its end, evil has taken over, and they six have been chosen to restart civilization on another planet. Ashton, Tyler, and their friends Brian, Andrea and Skylar must decide: die or begin again? They also discover an unbelievable magical realm sharing the new planet. Could this be where they truly belong? Battling evil, their selflessness sparks a stunning revelation – they are not human at all. The Ekahna, plus an Elf King, Queen, librarian and eccentric wizard, race across the universe to uncover the group's origins and powers, but time runs short. Why were they living human lives? What will they learn about their destiny? With Armageddon looming, the answers must come quick, or all is lost.

Eye Color Morgan Worthy, 1999 Morgan Worthy, a research psychologist, presents a comprehensive picture of how eye color is related to the behavior of humans and animals. In humans, he used archival records of athletic performance to show the theoretical pattern which has light-eyed athletes performing at their best on self-paced tasks and dark-eyed athletes, on average, performing at their best on reactive tasks. This same general pattern is shown to hold true in animal behaviors such as hunting tactics of predators and escape tactics of prey. Whereas dark-eyed predators tend to rely on immediate, quick, reactions to catch prey, light-eyed predators tend to rely more on their ability to lie-in-wait or stalk prey. Various other behaviors such as perception and social interaction are discussed in the same theoretical framework.

Compact Blue-Green Lasers William Paul Risk,T. R. Gosnell,A. V. Nurmikko,2003-01-09 William Risk, Timothy Gosnell and Arto Nurmikko have brought together their diverse expertise from industry and academia to write the first fully comprehensive book on the generation and application of blue-green lasers. This volume describes the theory and practical implementation of three techniques for the generation of blue-green light: nonlinear frequency conversion of infrared lasers, upconversion lasers, and wide bandgap semiconductor diode lasers. In addition, it looks at the various applications that have driven the development of compact sources of blue-green light, and reflects on the recent application of these lasers in high-density data storage, color displays, reprographics, and biomedical technology. Compact Blue-Green Lasers is suitable for graduate-level courses or as a reference for academics and professionals in optics, applied physics, and electrical engineering.
