JavaScript by Example Dani Akash S,2017-08-30 A project

based guide to help you get started with web development by building real-world and modern web applications

About This Book

Learn JavaScript from scratch by building clones of popular web applications

Understand the core concepts and techniques surrounding JavaScript with this power-packed hands-on guide

Explore modern JavaScript frameworks and libraries such as Node, React and Webpack

Who This Book Is For

The target audience for this book is developers with little or basic knowledge of working with JavaScript. If you are an emerging web developer with experience in building static web pages using HTML and CSS, this book will teach you to add JavaScript elements to make your website interactive and dynamic.

What You Will Learn

- A strong understanding of web application development with JavaScript and ES6.
- A firm foundation on which to master other JavaScript frameworks and libraries.
- Write maintainable and scalable code by organizing functions into modules.
- Importance of tools such as Node, NPM, Babel, and Webpack in Front-end development.
- Work with real-time data such as incoming video streams, texts, and so on
- Integrate React with JavaScript to build large-scale applications.
- Utilize Redux to manage data across React components and greatly speed up the development process

In Detail

JavaScript is

the programming language that all web developers need to learn. The first item on our JavaScript to-do list is building a To-do list app, which you'll have done by the end of the first chapter. You'll explore DOM manipulation with JavaScript and work with event listeners. You'll work with images and text to build a Meme creator. You will also learn about ES (ECMAScript) classes, and will be introduced to layouts using the CSS3 Flexbox. You'll also develop a responsive Event Registration form that allows users to register for your upcoming event and use charts and graphics to display registration data. You will then build a weather application, which will show you different ways perform AJAX requests and work with dynamic, external data. WebRTC enables real-time communication in a web browser; you'll learn how to use it when you build a real-time video-call and chat application later in the book. Towards the end of the book, you will meet React, Facebook's JavaScript library for building user interfaces. You'll throw together a blog with React, and get a feel for why this kind of JavaScript framework is used to build large-scale applications. To make your blog more maintainable and scalable, you'll use Redux to manage data across React components. **Style and approach** This project-based guide will teach you all the facets of JavaScript through real-world

app examples.

Mac OS X Tiger Killer Tips Scott Kelby, 2005-08-08 Tips rule!

Have you ever noticed that in just about every Mac book, the author will include a couple of tips in each chapter (you'll usually find them in the sidebar, or at the bottom of the page in a tinted box). Sometimes it's a shortcut, a faster way to do something, or a clever workaround that just makes your life easier. People really love those tips, but there's only one problem--there's never enough of them. That's why Scott Kelby, bestselling author and Editor-in-Chief of Mac Design magazine came up with the idea to create a book that's nothing but "sidebar" tips. That's right--this entire book, cover-to-cover is packed with nothing but those cool inside secrets, slick workarounds, undocumented shortcuts, and sneaky little tricks that will make you faster, better, and have more fun using Mac OS 10.4 (Tiger). Nothing but the tips! You're not going to find complicated descriptions on how to configure a network, how to partition a hard drive, or lines and lines of scary-looking UNIX code--instead this book is nothing but cool tips--and it's all written in Scott's casual, plain English style so you can start using

these tips today. Plus, this book does the standard sidebar tip one better by including a clear screen capture with nearly every tip, so you can see exactly how it's all done. Not just tips. Killer tips! To be in this book, every tip has got to be a Killer Tip (the kind of tip that makes you nod and smile, then call all your Mac buddies to tune them up with your new-found power). Scott's a total hip hound (in fact, it was Scott who created the entire smash-bestselling Killer Tips book series), and he doesn't hold anything back--it's all here from the man who literally wrote the book on cool productivity tips. If you like doing things the easy way, if you like getting twice the work done in half the time, and if you get a kick out of knowing all the inside secrets and undocumented shortcuts that will wow your friends and coworkers, you're absolutely going to love this book.

Getting Started with Your Mac and Mac OS X Tiger Scott Kelby, 2005-05-25 You bought your Mac OS X Tiger computer because you thought it would be easy to use-and it is! But if you've never used a computer before, never stared at a graphical user interface or clicked an icon to launch a program or open a file, getting going with your new machine can still be a daunting proposition. With this guide from legendary author Scott Kelby, it

doesn't have to be! Realizing there are still plenty of novice users just like yourself whose Macs represent their very first foray into personal computing, this guide provides a simple, practical approach guaranteed to get you sending email, going on the Internet, creating Word documents, and more immediately with Mac OS X Tiger. Focused lessons take you step-by-step through all of the tasks you're most eager to tackle with your Mac OS X Tiger machine (in the order you're likely to approach them): using the mouse, going on the Internet, sending email, initiating iChat sessions, creating address books and calendars, importing and sharing photos, making play lists and burning CDs, synching music with your iPod, launching and saving Word documents, using search (Spotlight), organizing files, and more.
