The Power of Networks Christopher G. Brinton, Mung Chiang, 2018-11-13 An accessible illustrated introduction to the networks we use every day, from Facebook and Google to WiFi and the Internet What makes WiFi faster at home than at a coffee shop? How does Google order search results? Is it really true that everyone on Facebook is connected by six steps or less? The Power of Networks answers questions like these for the first time in a way that all of us can understand. Using simple language, analogies, stories, hundreds of illustrations, and no more math than simple addition and multiplication, Christopher Brinton and Mung Chiang provide a smart and accessible introduction to the handful of big ideas that drive the computer networks we use every day. **Single-Valued Neutrosophic Techniques for Analysis of WIFI Connection** Said Broumi, Prem Kumar Singh, Mohamed Talea, Florentin Smarandache, V. Venkateswara Rao, Wireless ad hoc network (WANET) is self-configured networking. It does not rely on pre-existing routers or access points. Mobile ad hoc network (MANET) is an application of WANET where mobile devices are connected wirelessly without any infrastructure. Such networks are either considered as truly connected, not connected and may disconnected due to noise in network or some other uncertainty in connectivity. In this case, characterizing the truth, indeterminacy and falsity information communicated in the mobile network is difficult while utilizing the traditional mathematical set theories. To resolve this issue, in current paper authors' focus on estimating information processing in MANET via mathematics algebra of Single-Valued Neutrosophic Set (SVNS). In addition, an example is given for better understanding of MANET in the neutrosophic environment.
