  Mobile Messaging Technologies and Services Gwenaël Le Bodic,2003-06-13 Mobile messaging is practically the first data communication service in the wireless domain. It is a major advance on the conventional practice of providing only voice communication service over the wireless interface. Thus, mobile messaging is the initial step to bring the Internet to wireless terminals and has considerable importance both for mobile communication and the Internet. Mobile Messaging provides an in-depth description of messaging technologies supported by mobile networks. It covers the Short Message Service (SMS), Enhanced Messaging Service (EMS) through to the more complex and emerging Multimedia Messaging Service (MMS). The Short Message System (SMS) has proved to be incredibly popular and is supported by most GSM, TDMA and CDMA mobile networks. This volume focuses on the Short Message Service introduced by the European Telecommunications Standard Institute (ETSI) for GSM and GPRS networks. On the basis of ETSI standard, the 3rd Generation Partnership Project (3GPP) is currently the organisation responsible for maintaining the SMS technical specifications. In its most basic form, the Short Messaging Service allows users to exchange short messages composed of a limited amount of text and it is expected that up to 100 Billion short messages could be exchanged monthly by the end of 2002. The Enhanced Message

Service (EMS), an application-level extension of SMS, supersedes basic SMS features by allowing elements such as images, animations, formatted text and monophonic melodies to be inserted in short or concatenated messages. Recently, the 3GPP has been focusing on the development of the Multimedia Message Service (MMS). MMS features include the exchange of messages containing polyphonic melodies, large images, video elements sometimes organised with a multimedia presentation language such as SMIL or xHTML. MMS will be supported by 2.5 G and 3G networks. MMS specifications have reached a fairly mature stage and MMS commercial solutions are appearing on the market. Unlike EMS, MMS has been specified by the 3GPP as a service independent from the underlying network technologies. In parallel to the 3GPP standardisation process, other organisations have specified network-specific implementations of MMS such as the WAP implementation defined by the WAP Forum. In order to develop applications using Short, Enhanced and Multimedia messaging technologies, engineers have to become familiar with the use of technical specifications produced by various standard development organisations such as the 3GPP, the WAP Forum and the IETF and this is the first book to pull this vast array of material together. * Provides an in depth description of the different messaging services and messaging technologies * Presents an introduction to mobile networks * Features numerous practical implementation examples * Provides a unique easy-to-follow presentation of messaging services and mobile networks within a single publication Essential reading

for content providers, service providers, network operators and telecommunications manufacturers, researchers, postgraduate students, marketing and standardisation personnel.

  Computational and Cognitive Approaches to Narratology Ogata, Takashi,Akimoto, Taisuke,2016-07-15 Studying narratives is often the best way to gain a good understanding of how various aspects of human information are organized and integrated—the narrator employs specific informational methods to build the whole structure of a narrative through combining temporally constructed events in light of an array of relationships to the narratee and these methods reveal the interaction of the rational and the sensitive

aspects of human information. Computational and Cognitive Approaches to Narratology discusses issues of narrative-related information and communication technologies, cognitive mechanism and analyses, and theoretical perspectives on narratives and the story generation process. Focusing on emerging research as well as applications in a variety of fields including marketing, philosophy, psychology, art, and literature, this timely publication is an essential reference source for researchers, professionals, and graduate students in various information technology, cognitive studies, design, and creative fields.

  Digilect Ágnes Veszelszki,2017-06-26 The high degree of internet penetration and its social (and linguistic) effects evidently influence how people, and especially the highly susceptible younger generations, use language. The primary aim of the book is not only to identify the characteristic features of the digital language variety (this has already been done by several works) but to examine how digital communication affects the language of other mediums of communication: orality, handwritten texts, digitally created but not digitally perceived, that is printed texts, including in particular advertisements (which quickly respond to linguistic change). Naturally, the book presents the characteristics of the digital language variety (and coins the term digilect) but only to give a framework to the impact analysis. It is important to document changes in progress and thus direct attention to potential outcomes. The current linguistic change is

different from previous ones primarily in its speed and form of spreading, and it not only brings innovative grammatical forms and writing/spelling solutions but may also have far-reaching cultural and educational consequences in the long run.
