The Death of the Internet Markus

Jakobsson, 2012-07-11 Fraud poses a significant threat to the Internet. 1.5% of all online advertisements attempt to spread malware. This lowers the willingness to view or handle advertisements, which will severely affect the structure of the web and its viability. It may also destabilize online commerce. In addition, the Internet is increasingly becoming a weapon for political targets by malicious organizations and governments. This book will examine these and related topics, such as smart phone based web security. This book describes the basic threats to the Internet (loss of trust, loss of advertising revenue, loss of security) and how they are related. It also discusses the primary countermeasures and how to implement them.

Semantic Modeling and Enrichment of Mobile and
WiFi Network Data Abdulbaki Uzun, 2018-07-20 This
book discusses the fusion of mobile and WiFi
network data with semantic technologies and
diverse context sources for offering semantically
enriched context-aware services in the
telecommunications domain. It presents the
OpenMobileNetwork as a platform for providing
estimated and semantically enriched mobile and
WiFi network topology data using the principles of
Linked Data. This platform is based on the
OpenMobileNetwork Ontology consisting of a set of
network context ontology facets that describe
mobile network cells as well as WiFi access points
from a topological perspective and geographically
relate their coverage areas to other context
sources. The book also introduces Linked
Crowdsourced Data and its corresponding Context
Data Cloud Ontology, which is a crowdsourced
dataset combining static location data with
dynamic context information. Linked Crowdsourced
Data supports the OpenMobileNetwork by providing
the necessary context data richness for more
sophisticated semantically enriched context-aware
services. Various application scenarios and proof
of concept services as well as two separate
evaluations are part of the book. As the usability

of the provided services closely depends on the quality of the approximated network topologies, it compares the estimated positions for mobile network cells within the OpenMobileNetwork to a small set of real-world cell positions. The results prove that context-aware services based on the OpenMobileNetwork rely on a solid and accurate network topology dataset. The book also evaluates the performance of the exemplary Semantic Tracking as well as Semantic Geocoding services, verifying the applicability and added value of semantically enriched mobile and WiFi network data.

Health Trackers Richard MacManus,2015-08-01 A new industry is growing around the tracking of health and fitness through various gadgets, apps, and programs. These new ways of monitoring our every move, however, may not be well understood even by those who use them, and yet they may be revolutionizing the health and wellness industries. This book makes sense of the various tracking devices and illustrates how they work for us and our overall health.
