Henry Walter Young

The Royal Corps of Signals Cliff Lord, Graham Watson, 2014-02-24 The ability to communicate is a prerequisite for success both in military and civil life. Surprisingly, everyone expects access to communications, but rarely wonders how it is achieved. The purpose of this book is to bring into focus one of the cornerstones of the success of the British Army, and to provide an insight into the complexity and diversity of the Royal Corps of Signals. This is done, not by narrative, but by delving into unit history rather than campaign history, thus offering a different perspective for the historian. Royal Signals is one of the largest Corps in the British Army, and consists of a body of very highly trained and dedicated personnel to manage, operate, and repair the advanced technology that is theirs to administer. Signals are the Invisible Elite, without them there is no victory. Before the independent Corps of Signals was formed in 1920, Royal Engineers provided communications for much of the Army. Details of their signal units are included. Reflecting the new technologies as they occur, the reader will see the new signal units being raised to facilitate the exigencies of the time. For example, during the Second World War the Golden Arrow Detachments were created as independent, mobile, high-speed transmitting and receiving stations to provide links to Britain, and thus provide High Command with the information from Commanders in the Field that was desperately needed. These units also passed intercepted enemy signals back to England for the code breakers at Bletchley Park. Other specialist Signal units were created for Air Support, Para Signals, Commandos, Interception, Fixed Communications, Peacekeeping and a multitude of other reasons. In today's changing world signals continue to get their message through - Swift and Sure. This book is a must for historians, genealogists, and those that served. It contains: - Overviews of the Signals Order of Battle at specific times in history- Detailed précis of specialist signal units including Commando, and Para units.- History of 35 Commonwealth and related Signal Corps- Photographs of many rare signal badges- Scores and scores of unit histories both Regular and Territorial from the past to the present

9XM Talking Randall Davidson, 2007-02-26 Randall Davidson provides a comprehensive history of the innovative work of Wisconsin's educational radio stations. Beginning with the first broadcast by experimental station 9XM at the University of Wisconsin, followed by WHA, through the state-owned affiliate WLBL, to the network of stations that in the years following WWII formed the Wisconsin Public Radio network, Davidson describes how, with homemade equipment and ideas developed from scratch, public radio became a tangible example of the Wisconsin Idea, bringing the educational riches of the university to all the state's residents. Marking the centennial year of Wisconsin Public Radio, this paperback edition includes a new foreword by Bill Siemering, National Public Radio's founding director of programming.

Police control systems in Britain, 1775-1975 Chris Williams, 2015-11-01 During the last two centuries, the job of policing in Britain has been transformed several times. This book analyses the ways that police institutions have controlled the individual constable on the 'front line'. The eighteenth-century constable was an independent artisan: his successor in the Metropolitan Police and other 'new' forces was ferociously disciplined and closely monitored. Police have been controlled by a variety of different practices, ranging from direct day-to-day input from 'the community', through bureaucratic systems built around exacting codes of rules, to the real-time control of officers via radio, and latterly the use of centralised computer systems to deliver key information. Police forces became pioneers in the adoption of many technologies - including telegraphs, telephones, office equipment, radio and computers - and this book explains why and how this happened, considering the role of national security in the adoption of many of these innovations. It will be of use to a range of disciplines, including history, criminology, and science and technology studies.
