Web Cartography Jan-Menno Kraak, Allan Brown, 2003-09-02 Maps and atlases are created as soon as information on our geography has been clarified. They are used to find directions or to get insight into spatial relations. They are produced and used both on paper as well as on-screen. The Web is the new medium for spreading and using maps. This book explains the benefits of this medium from the perspective of the user, and the map provider.

Opportunities and pitfalls are illustrated by a set of case-studies. A website accompanies the book and provides a dynamic environment for demonstrating many of the principles set out in the text, including access to a basic course in Internet cartography as well as links to other interesting places on the Web. Professor Kraak looks at basic questions such as I have this data what can I do with it? and discusses the various functions of maps on the web. Web Cartography also looks at the particularities of multidimensional web maps and addresses topics such as map contents (colour, text and symbols), map physics (size and resolution), and the map environment (interface design/site contents).

Lakefront Airport Philip Marshall, 2013-08-25 Based on the author's true involvement in the 1984 Drug Enforcement Agency sting on Pablo Escobar and the covert arming the Nicaraguan Contras Marshall takes us on midnight runs with a daredevil DEA informant who has infiltrated the Medellin Cartel and is simultaneously running illegal arms to the Contra rebels in Nicaragua. The informant character is based entirely on true events of Barry Seal, (working under George Bush and Ollie North) who was running an illegal weapons pipeline from Mena, Arkansas to

Central America and a northbound cocaine pipeline from Central America back to Mena. Randolph Chapman is the sidekick to the informant in a deadly game of Mac 10 submachine-guns, cocaine and a corrupt group inside the US Executive Branch, who had formed a covert cocaine trafficking Enterprise of their own, headquartered in the basement of White House. The US Enterprise takes over the routes after the Cartel is rounded up and executed.

Maps and the Internet M.P. Peterson, International Cartographic Association, 2005-12-17 This book examines a new trend affecting cartography and geographic information science. Presenting the work of over 30 authors from 16 different countries, the book provides an overview of current research in the new area of Internet Cartography. Chapters deal with the growth of this form of map distribution, uses in education, privacy issues, and technical aspects from the point of view of the map provider - including Internet protocols such as XML and SVG. Many see the Internet as a revolution for cartography. Previously tied to the medium of paper and expensive large-format color print technology, maps had a limited distribution and use. The Internet made it possible to not

only distribute maps to a much larger audience but also to incorporate interaction and animation in the display. Maps have also become timelier with some maps of traffic and weather being updated every few minutes. In addition, it is now possible to access maps from servers throughout the world. Finally, the Internet has made historic maps available for viewing to the public that were previously only available in map libraries with limited access. *

Digital Avionics Handbook Cary Spitzer, 2000-12-20 Avionics provide crews and passengers with an array of capabilities. Cockpit crews can operate with fewer pilots, greater efficiency, and immediate critical information. Passengers can enjoy the ultimate in inflight entertainment: live television and audio broadcasts and access to the Internet and e-mail. Since avionics are the among most expensive items on an aircraft, designers are continually challenged to produce cost-effective, highly reliable hardware. Whether you are a working engineer or a manager, you need a source you can refer to for the latest information on any aspect of avionics. The Avionics Handbook presents complete coverage of

the field, from the building blocks of a typical system through the process used in designing, building, and testing modern military and civil aircraft avionics systems. It includes examples from emerging technologies, such as pilot-aircraft speech interaction and synthetic vision. With contributions from top practitioners in the field, this volume presents a complete overview of avionics to give you the knowledge you need to approach any problem.

Ms. Hempel Chronicles Sarah Shun-lien Bynum,2020-10-27

Ms. Hempel Chronicles is a deeply affecting (Los Angeles Times) novel of a devoted young teacher finding her way Ms. Beatrice Hempel, teacher of seventh grade, is new—new to teaching, new to the school, newly engaged, and newly bereft of her idiosyncratic father. Grappling awkwardly with her newness, she struggles to figure out what is expected of her in life and at work. Is it acceptable to introduce swear words into the English curriculum, enlist students to write their own report cards, or bring up personal experiences while teaching a sex-education class? Sarah Shun-lien Bynum finds characters at their most vulnerable, then explores those precarious moments in sharp, graceful prose. From this most innovative of young writers comes another journey down the rabbit hole to the wonderland of middle school, memory, daydreaming, and the extraordinary business of growing up.
