The Fourth Industrial Revolution Klaus Schwab, 2017-01-03 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Stakeholder Capitalism Klaus Schwab, 2021-01-27 Reimagining our global economy so it becomes more sustainable and prosperous for all Our global economic system is broken. But we can replace the current picture of global upheaval, unsustainability, and uncertainty with one of an economy that works for all people, and the planet. First, we must eliminate rising income inequality within societies where productivity and wage growth has slowed. Second, we must reduce the dampening effect of monopoly market power wielded by large corporations on innovation and productivity gains. And finally, the short-sighted exploitation of natural resources that is corroding the environment and affecting the lives of many for the worse must end. The debate over the causes of the broken economy—laissez-faire government, poorly managed globalization, the rise of technology in favor of the few, or yet another reason—is wide open. Stakeholder Capitalism: A Global Economy that Works for Progress,

People and Planet argues convincingly that if we don't start with recognizing the true shape of our problems, our current system will continue to fail us. To help us see our challenges more clearly, Schwab—the Founder and Executive Chairman of the World Economic Forum—looks for the real causes of our system's shortcomings, and for solutions in best practices from around the world in places as diverse as China, Denmark, Ethiopia, Germany, Indonesia, New Zealand, and Singapore. And in doing so, Schwab finds emerging examples of new ways of doing things that provide grounds for hope, including: Individual agency: how countries and policies can make a difference against large external forces A clearly defined social contract: agreement on shared values and goals allows government, business, and individuals to produce the most optimal outcomes Planning for future generations: short-sighted presentism harms our shared future, and that of those yet to be born Better measures of economic success: move beyond a myopic focus on GDP to more complete, human-scaled measures of societal flourishing By accurately describing our real situation, Stakeholder Capitalism is able to pinpoint achievable ways to deal with our problems. Chapter by chapter, Professor Schwab shows us that there are ways for everyone at all levels of society to reshape the broken pieces of the global economy and—country by country, company by company, and citizen by citizen—glue them back together in a way that benefits us all.

Covid-19: The Great Reset Thierry Malleret, Klaus Schwab, 2020-07-09 The Corona crisis and the Need for a Great Reset is a guide for anyone who wants to understand how COVID-19 disrupted our social and economic systems, and what changes will be needed to create a more inclusive, resilient and sustainable world going forward. Thierry Malleret, founder of the Monthly Barometer, and Klaus Schwab, founder and executive Chairman of the World Economic Forum, explore what the root causes of these crisis were, and why they lead to a need for a Great Reset. Theirs is a worrying, yet hopeful analysis. COVID-19 has created a great disruptive reset of our global social, economic, and political systems. But the power of human beings lies in being foresighted and having the ingenuity, at least to a certain extent, to take their destiny into their hands and to plan for a better future. This is the purpose of this book: to shake up and to show the deficiencies which were manifest in our global system, even before COVID broke out.

The World Economic Forum Geoffrey Allen Pigman, 2007-01-24 This book explores the paradoxes and unique characteristics of the World Economic Forum, highlighting contemporary issues and debates on global governance, economic development and corporate social responsibility. The Forum is one of the most influential, but least understood, global institutions. Its annual meeting in Davos,

Switzerland and its regional summits held around the world attract a significant and powerful audience from the worlds of business, economics, politics and civil society. The participants, who include business and political leaders, representatives of international institutions and civil society organizations, academia and the media, meet to debate issues of global concern and to develop possible solutions. Forum members see the organization as an innovative venue bringing together different types of stakeholders to solve global problems. To its critics, however, the Forum's public face conceals a private venue for making business deals. With clear and concise sections, including boxes containing key ideas and arguments, The World Economic Forum is a much needed introduction to an important and controversial organization and will be of considerable interest to students and practitioners of international business, international political economy, economics, development, international relations, and globalization.

World Economic Forum, Davos 2024. Thomas C Sanchez, 2024-01-18 World Economic Forum, Davos 2024. World Economic Forum, Davos 2024, offers an in-depth exploration of the World

Economic Forum's flagship annual meeting. This comprehensive account delves into discussions on critical issues such as geopolitical tensions, climate imperatives, economic challenges, and technological frontiers. It scrutinizes key takeaways, providing insights into global leaders' collaborative efforts. Addressing criticisms and calls for inclusivity, the book serves as a thought-provoking guide for understanding and shaping the trajectory of our interconnected world. Whether you're a policymaker, business leader, or concerned global citizen, this book illuminates the complexities and opportunities of our shared global challenges.

Shaping the Future of the Fourth Industrial Revolution Klaus Schwab, Nicholas Davis, 2018-11-06
World Economic Forum Founder and Executive Chairman Klaus Schwab offers a practical companion and field guide to his previous book, *The Fourth Industrial Revolution*. Today, technology is changing everything--how we relate to one another, the way we work, how our economies and governments function, and even what it means to be human. One need not look hard to see how the incredible advances in artificial intelligence, cryptocurrencies, biotechnologies, and the internet of things are transforming society in unprecedented ways. But the Fourth Industrial Revolution is just beginning, says Schwab. And at a time of such tremendous uncertainty and such rapid change, he argues it's our actions as individuals and leaders that will determine the trajectory our future will take. We all have a responsibility - as citizens, businesses, and institutions - to work with the current of progress, not against it, to build a future that is ethical, inclusive, sustainable and prosperous. Drawing on contributions from 200 top experts in fields ranging from machine learning to geoengineering to nanotechnology, to data ethics, Schwab equips readers with the practical tools to leverage the technologies of the future to leave the world better, safer, and more resilient than we found it.

The World Economic Forum and Transnational Networking Elizabeth Friesen, 2020-06-30
The World Economic Forum and Transnational Networking presents an informative investigation of the WEF as a political actor and important part of transnational civil society. Drawing upon extensive original research, Friesen analyzes the surprising role the WEF has played in international processes.

Water Security The World Economic Forum Water Initiative, 2012-02-24
The world is on the brink of the greatest crisis it has ever faced: a spiraling lack of fresh water. Groundwater is drying up, even as water demands for food production, for energy, and for manufacturing are surging. Water is already emerging as a headline geopolitical issue—and worsening water security will soon have dire consequences in many parts of the global economic system. Directed by UN Secretary General Ban Ki-Moon at the 2008 Davos Annual Meeting, the World Economic Forum assembled the world's

foremost group of public, private, non-governmental-organization and academic experts to examine the water crisis issue from all perspectives. The result of their work is this forecast—a stark, non-technical overview of where we will be by 2025 if we take a business-as-usual approach to (mis)managing our water resources. The findings are shocking. Perhaps equally stunning are the potential solutions and the recommendations that the group presents. All are included in this landmark publication. *Water Security* contains compelling commentary from leading decision-makers, past and present. The commentary is supported by analysis from leading academics of how the world economy will be affected if world leaders cannot agree on solutions. The book suggests how business and politics need to manage the energy-food-water-climate axis as leaders negotiate the details of the climate regime that replace Kyoto Protocols.

Discreet Power Christina Garsten, Adrienne Sörbom, 2018-07-10 “In this informative study, Garsten and Sorbom explore both the inner workings and the communication strategies of the WEF.” —Foreign Affairs In *Discreet Power*, Christina Garsten and Adrienne Sörbom undertake an ethnographic study of the World Economic Forum (WEF). Accessing one of the primary agenda-setting organizations of our day, they draw on interviews and participant observation to examine how the WEF wields its influence. They situate the WEF within an emerging system of “discretionary governance,” in which actors craft ideas and entice formal authorities and top leaders to garner significant sway. Yet despite its image as a powerful, exclusive brain trust, the WEF has no formal mandate to implement its positions. It must convince others to advance chosen causes and enact suggestions, rendering its position quite fragile. Garsten and Sörbom argue that the WEF must be viewed relationally as a brokering organization that lives between the market and political spheres and that extends its reach through associated individuals and groups. They place the WEF in the context of a broader shift, arguing that while this type of governance opens up novel ways of dealing with urgent global problems, it challenges core democratic values. Praise for *Discreet Power* “Between raw forces of the global economy and disordered world politics lie organizations that are neither political nor economic. The World Economic Forum is central among these structures. Garsten and Sörbom give a most impressive depiction and analysis of its role—responsible but undemocratic—in what is now called global governance.” —John W. Meyer, Stanford University “This is an outstanding exemplar of a very difficult genre in the craft of ethnography: working within the highest reaches of elite organization. The challenge lies less in limited access than in not reinforcing our deep-seated stereotypes of what goes on in such groups. This work is distinguished by its observational quality and derived expression of the stakes and issues at hand.”

—George Marcus, University of California, Irvine

Future of Jobs IntroBooks Team, Times are changing and the labor markets are under immense burden from the collective effects of various megatrends. Technological growth and grander incorporation of economies along with global supply chains have been an advantage for several workers armed with high skills and in growing occupations. However, it is a challenge for workers with low or obsolete skills in diminishing zones of employment. Business models that are digitalized hire workers as self-employed instead of standard employees. People seem to be working and living longer, but they experience many job changes and the peril of skills desuetude. Inequalities in both quality of job and earnings have increased in several countries. The depth and pace of digital transformation will probably be shocking. Industrial robots have already stepped in and artificial intelligence is making its advance too. Globalization and technological change predict the great potential for additional developments in labor market performance. But people should be ready for change. A progression of creative annihilation is probably under way, where some chores are either offshored or given to robots. A better world of for jobs cannot be warranted – a lot will be contingent on devising the right policies and institutes in place.

The Great Reset Richard Florida, 2010-04-27 We tend to view prolonged economic downturns, such as the Great Depression of the 1930s and the Long Depression of the late nineteenth century, in terms of the crisis and pain they cause. But history teaches us that these great crises also represent opportunities to remake our economy and society and to generate whole new eras of economic growth and prosperity. In terms of innovation, invention, and energetic risk taking, these periods of creative destruction have been some of the most fertile in history, and the changes they put into motion can set the stage for full-scale recovery. In *The Great Reset*, bestselling author and economic development expert Richard Florida provides an engaging and sweeping examination of these previous economic epochs, or resets. He distills the deep forces that have altered physical and social landscapes and eventually reshaped economies and societies. Looking toward the future, Florida identifies the patterns that will drive the next Great Reset and transform virtually every aspect of our lives — from how and where we live, to how we work, to how we invest in individuals and infrastructure, to how we shape our cities and regions. Florida shows how these forces, when combined, will spur a fresh era of growth and prosperity, define a new geography of progress, and create surprising opportunities for all of us. Among these forces will be * new patterns of consumption, and new attitudes toward ownership that are less centered on houses and cars * the transformation of millions of service jobs into middle class careers that engage workers as a source of innovation * new forms of infrastructure that speed the movement of people, goods, and ideas * a radically altered and much denser economic landscape organized around megaregions that will drive the development of new industries, new jobs, and a whole new way of life We've weathered tough times before. They are a necessary part of economic cycles, giving us a chance to clearly see what's working and what's not. Societies can be reborn in such crises, emerging fresh, strong, and refocused. Now is our opportunity to anticipate what that brighter future will look like and to take the steps that will get us there faster. With his trademark blend of wit, irreverence, and rigorous research and analysis, Florida presents an optimistic and counterintuitive vision of our future, calling into question long-held beliefs about the nature of economic progress and forcing us to reassess our very way of life. He argues convincingly that it's time to turn

our efforts – as individuals, as governments, and as a society – to putting the necessary pieces in place for a vibrant, prosperous future.

Winners Take All Anand Giridharadas, 2018-08-28 NEW YORK TIMES BESTSELLER • The groundbreaking investigation of how the global elite's efforts to change the world preserve the status quo and obscure their role in causing the problems they later seek to solve. An essential read for understanding some of the egregious abuses of power that dominate today's news. Impassioned.... Entertaining reading.” –The Washington Post Anand Giridharadas takes us into the inner sanctums of a new gilded age, where the rich and powerful fight for equality and justice any way they can—except ways that threaten the social order and their position atop it. They rebrand themselves as saviors of the poor; they lavishly reward “thought leaders” who redefine “change” in ways that preserve the status quo; and they constantly seek to do more good, but never less harm. Giridharadas asks hard questions: Why, for example, should our gravest problems be solved by the unelected upper crust instead of the public institutions it erodes by lobbying and dodging taxes? His groundbreaking investigation has already forced a great, sorely needed reckoning among the world's wealthiest and those they hover above, and it points toward an answer: Rather than rely on scraps from the winners, we must take on the grueling democratic work of building more robust, egalitarian institutions and truly changing the world—a call to action for elites and everyday citizens alike.

The Global Competitiveness Report 2003-2004 World Economic Forum, 2004 The Global Competitiveness Report 2003-2004 is the 24th of the World Economic Forum's annual rankings of the world's leading economies. Written in a non-technical language and style, this report aims to appeal to a broad audience consisting of policy makers, business leaders and academics.

Dimensions of Competitiveness Paul De Grauwe, 2010-07-23 Leading economists analyze the multiple factors that drive competitiveness among nations in world markets. Competitiveness among nations is often approached as if it were a sports competition: some countries win medals, others lose out. This view of countries fighting it out in the economic arena is especially popular in business circles and among politicians. Economists, however, take a very different approach to international economic relations, arguing that international trade leads not to winners and losers but to win-win situations in which all countries profit. In this volume, leading economists take on the sometimes-derided concept of competitiveness, demonstrating the value of systematic analysis in an area too often dominated by special interest groups who use (and abuse) the concept to advance hidden agendas. The chapters

range from broad theoretical views to case studies, examining the multiple factors that drive competitiveness. Contributors consider the conceptual framework underlying the World Economic Forum's approach to competitiveness; differences in per capita GDP between the United States and the European Union; an integrated approach to measuring competitiveness and comparative advantage; divergent trends in price and cost competitiveness in the euro area; methodological issues in constructing competitiveness indicators; taxation and international competitiveness; and a case study of Mexico's competitiveness in world markets in comparison to China's. Contributors Harry P. Bowen, Michele Ca' Zorzi, Jean-Philippe Cotis, Romain Duval, Christoph Fischer, Michael S. Knoll, Inmaculada Martinez-Zarzoso, Wim Moesen, Felicitas Nowak-Lehmann, Xavier Sala-i-Martin, Bernd Schnatz, Alain de Serres, Eckhard Siggel, Sebastian Vollmer
