Deter, Disrupt, Or Deceive Robert Chesney,Max Smeets,2023 The idea of cyber war has played a dominant role both in academic and popular discourses concerning the nature of statecraft and conflict in the cyber domain. However, this lens of war and its expectations for death and destruction may distort rather than help clarify the nature of cyber competition. Are cyber activities actually more like an intelligence contest, where both states and nonstate actors grapple for advantage below the threshold of war? This book debates that question. The contributors unpack the conceptual and theoretical logics of the framing of cyber competition as an intelligence contest, particularly in the areas of information theft and manipulation. Taken as a whole, the chapters give rise to a unique dialogue, illustrating areas of agreement and disagreement among leading experts, and placing all of it in conversation with the larger fields of international relations and intelligence studies--

Global Intelligence Oversight Zachary K. Goldman,Samuel J. Rascoff,2016-04-26 In a world that is increasingly unstable, intelligence services like the American CIA and the United Kingdom's MI6 exist to deliver security. Whether the challenge involves terrorism, cyber-security, or the renewed specter of great power conflict, intelligence agencies mitigate threats and provide decisional advantage to national leaders. But empowered intelligence services require adequate supervision and oversight, which must be about more than the narrow (if still precarious) task of ensuring the legality of covert operations and surveillance activities. Global Intelligence Oversight is a comparative investigation of how democratic countries can govern their intelligence services so that they are effective, but operate within frameworks that are acceptable to their people in an interconnected world. The book demonstrates how the institutions that oversee intelligence agencies participate in the protection of national security while safeguarding civil liberties, balancing among competing national interests, and building public trust in inherently secret activities. It does so by analyzing the role of courts and independent oversight bodies as they operate in countries with robust constitutional frameworks and powerful intelligence services. The book also illuminates a new transnational oversight dynamic that is shaping and constraining security services in new ways. It describes how global technology companies and litigation in transnational forums constitute a new form of oversight whose contours are still undefined. As rapid changes in technology bring the world closer together, these forces will complement their more traditional counterparts in ensuring that intelligence activities remain effective, legitimate, and sustainable.

Conflict and Cooperation in Cyberspace Panayotis A Yannakogeorgos,Adam B Lowther,2016-04-19 Conflict and Cooperation in Cyberspace: The Challenge to National Security brings together some of the world's most distinguished military leaders, scholars, cyber operators, and policymakers in a discussion of current and future challenges that cyberspace poses to the United States and the world. Maintaining a focus on policy-relevant solutions, it offers a well-reasoned study of how to prepare for war, while attempting to keep the peace in the cyberspace domain. The discussion begins with thoughtful contributions concerning the attributes and importance of cyberspace to the American way of life and global prosperity. Examining the truths and myths behind recent headline-grabbing malicious cyber activity, the book spells out the challenges involved with establishing a robust system of monitoring, controls, and sanctions to ensure cooperation amongst all stakeholders. The desire is to create a domain that functions as a trusted and resilient environment that fosters cooperation, collaboration, and commerce. Additionally, the book: Delves into the intricacies and

considerations cyber strategists must contemplate before engaging in cyber war Offers a framework for determining the best ways to engage other nations in promoting global norms of behavior Illustrates technologies that can enable cyber arms control agreements Dispels myths surrounding Stuxnet and industrial control systems General Michael V. Hayden, former director of the National Security Agency and the Central Intelligence Agency, begins by explaining why the policymakers, particularly those working on cyber issues, must come to understand the policy implications of a dynamic domain. Expert contributors from the Air Force Research Institute, MIT, the Rand Corporation, Naval Postgraduate School, NSA, USAF, USMC, and others examine the challenges involved with ensuring improved cyber security. Outlining the larger ethical, legal, and policy challenges facing government, the private sector, civil society, and individual users, the book offers plausible solutions on how to create an environment where there is confidence in the ability to assure national security, conduct military operations, and ensure a vibrant and stable global economy.

Global Trends 2040 National Intelligence Council,2021-03 The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come. -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Global Intelligence Paul Todd,Jonathan Bloch,2003-09-01 The CIA, the KGB, MI5, Mossad, Boss, Savak, Dina - the names read like a rollcall of the seamier side of history in the years following the Second World War. Today the Cold War is dead; there are fewer dictatorships; and 9/11 has created a whole new raison d'etre for covert action. This book explains how the war on terrorism provides a wholly new context for the murky world secret services and intelligence agencies operate in, and describes in detail how ultra-modern new technologies have vastly increased their power to spy abroad and eavesdrop at home. This up-to-date account raises important issues, including the new roles the secret services have found for themselves as they target 'rogue states', 'the war on drugs', and 'terrorists'. Most important of all, its authors explore the unsolved contradiction between the world of these secretive and unaccountable agencies operating on the fringes of the law, and the requirements of a free and democratic society. There is, they conclude, 'no easy walk to freedom'.

Power and Complacency Phillip T. Lohaus,2021-07 The United States is at a crossroads. Despite a defense budget that dwarfs that of any of the nation's rivals, the marginal return on this investment has decreased dramatically since the end of World War II. Why? Why have America's rivals, despite inferior resources, increasingly set the terms of international competition? How might America's leaders reconsider the application of power to ensure a favorable place on an increasingly crowded global stage? By tracing the geographic and historical development of four global actors--Russia, Iran, China, and the United States--Phillip T. Lohaus illuminates four equally distinct approaches to competition outside of warfare. He argues that while America's actions may have birthed information as a currency of power, the nation's failure to fully grasp the implications of this transition has created critical opportunities for its rivals to increase their power at the expense of the United States. The American way of competition, rooted in a scientific understanding of warfare, may impede effectiveness in the amorphous and unscientific landscape of twenty-first-century competition. From Rome to Britain, complacency has contributed to the downfall of many empires. Yet the slow bleed of American power may still be stanched by an approach to competition that emphasizes subtlety, diffusion, and ubiquity. America has developed and used these tools in the past--its very survival may hinge on returning to them. Power and Complacency defines the differing perspectives of America's international conflicts and offers possible solutions for reformulating its superpower strengths.

Intelligence Power in Peace and War Michael Herman,1996-10-13 Intelligence services form an important but controversial part of the modern state. Drawing mainly on British and American examples, this book provides an analytic framework for understanding the intelligence community and assessing its value. Michael Herman, a former senior British Intelligence officer, describes the various components of intelligence; discusses what intelligence is for; considers issues of accuracy, evaluation and efficiency; and makes recommendations for the future of intelligence in the post-Cold War world.

Strategic Denial and Deception James Wirtz,2017-09-29 Does foreign denial and deception threaten the interests of contemporary democracies? Strategic denial and deception (D&D) has emerged as a little understood challenge to security in general, and the intelligence community in particular. To gain advantages, adversaries seek to deny critical information about their own activities and capabilities, and to decieve foreign governments. In recent years, Iraq, India, Somalia, Colombian criminal groups, and terrorists, for example, have all used D&D successfully against the United States. Denial and deception is a low cost, potentially high impact to level political, military, and economic playing fields, particularly against strong opponents.Concerns about the threat of denial and deception have waxed and waned since the end of World War II. Sometimes it shaped assessments about the former Soviet Union, for example. At other times, such as the end of the Cold War, such threats appear to fade into insignificance. This volume considers whether

globalization, proliferating communication technologies, and the dissemination of vast amounts of information make effective foreign denial and deception more or less likely. Contributors also examine whether more information and data sources make policymakers better informed or simply create confusion.Drawing on lessons learned from historical experiences, the authors propose ways to minimize future challenges. Chapters include Elements of Strategic Denial and Deception, by Abram Shulsky; Conditions Making for Success and Failure of D&D, by Barton Whaley; Conditions Making for Success and Failure of D&D, by M.R.D. Foot; Conditions Making for Success and Failure of D&D, by J. Bowyer Bell; Arms Control, by Lynn M. Hansen; and Prescription: Detecting Deception-Practice, Practitioners, and Theory, by Barton Whaley and Jeffrey Busby.While there are previous books about celebrated D&D cases, from Troy to Pearl Harbor and D-Day, no work attempts to assess how these instruments o

Artificial Intelligence and International Conflict in Cyberspace Fabio Cristiano,Dennis Broeders,François Delerue,Frédérick Douzet,Aude Géry,2023-05-11 This edited volume explores how artificial intelligence (AI) is transforming international conflict in cyberspace. Over the past three decades, cyberspace developed into a crucial frontier and issue of international conflict. However, scholarly work on the relationship between AI and conflict in cyberspace has been produced along somewhat rigid disciplinary boundaries and an even more rigid sociotechnical divide – wherein technical and social scholarship are seldomly brought into a conversation. This is the first volume to address these themes through a comprehensive and cross-disciplinary approach. With the intent of exploring the question 'what is at stake with the use of automation in international conflict in cyberspace through AI?', the chapters in the volume focus on three broad themes, namely: (1) technical and operational, (2) strategic and geopolitical and (3) normative and legal. These also constitute the three parts in which the chapters of this volume are organised, although these thematic sections should not be considered as an analytical or a disciplinary demarcation. This book will be of much interest to students of cyber-conflict, AI, security studies and International Relations. The Open Access version of this book is available for free in PDF format as Open Access from the individual product page at www.routledge.com. It has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license.

An Insight into China-US Competition in the Field of Artificial Intelligence Sana Gul,2022-01-10 Examination Thesis from the year 2021 in the subject Computer Sciences - Artificial Intelligence, grade: 3.77, University of Peshawar, course: BS - International Relations, language: English, abstract: Artificial intelligence has recently emerged as a new subject of international competitiveness. In the realm of artificial intelligence, both United states and China are world leaders. The struggle between both the countries in AI will heighten mutual mistrust, accelerate the artificial intelligence arms race, and endanger geopolitical stability. This research looks at how both nations are progressing in many sectors of artificial intelligence and how Beijing is challenging America. However, there remains a gap between them in terms of artificial intelligence advancement. In the race for artificial intelligence supremacy, the United States is losing ground to China because of no long term strategy. The study examines the prospect that artificial intelligence might have an impact on the two nations' national security, as well as substantial alterations in the future power structures of the US and China. Still, China may become an emerging global power, and it is using artificial intelligence to elevate its position by sidelining the United States.

Intelligence in An Insecure World Peter Gill,Mark Phythian,2018-10-08 Security intelligence continues to be of central importance to the contemporary world: individuals, organizations and states all seek timely and actionable intelligence in order to increase their sense

of security. But what exactly is intelligence? Who seeks to develop it and to what ends? How can we ensure that intelligence is not abused? In this third edition of their classic text, Peter Gill and Mark Phythian set out a comprehensive framework for the study of intelligence, discussing how states organize the collection and analysis of information in order to produce intelligence, how it is acted upon, why it may fail and how the process should be governed in order to uphold democratic rights. Fully revised and updated throughout, the book covers recent developments, including the impact of the Snowden leaks on the role of intelligence agencies in Internet and social media surveillance and in defensive and offensive cyber operations, and the legal and political arrangements for democratic control. The role of intelligence as part of 'hybrid' warfare in the case of Russia and Ukraine is also explored, and the problems facing intelligence in the realm of counterterrorism is considered in the context of the recent wave of attacks in Western Europe. Intelligence in an Insecure World is an authoritative and accessible guide to a rapidly expanding area of inquiry – one that everyone has an interest in understanding.

Staying Ahead of the Competition ,

Staying Ahead of the Competition Dr. Chris Hall,Babette E. Bensoussan,2007 Physics and Modeling of Tera- and Nano-Devices is a compilation of papers by well-respected researchers working in the field of physics and modeling of novel electronic and optoelectronic devices. The topics covered include devices based on carbon nanotubes, generation and detection of terahertz radiation in semiconductor structures including terahertz plasma oscillations and instabilities, terahertz photomixing in semiconductor heterostructures, spin and microwave-induced phenomena in low-dimensional systems, and various computational aspects of device modeling. Researchers as well as graduate and postgraduate students working in this field will benefit from reading this book.

Information and Business Intelligence Xilong Qu,Chenguang Yang,2012-04-25 This two-volume set (CCIS 267 and CCIS 268) constitutes the refereed proceedings of the International Conference on Information and Business Intelligence, IBI 2011, held in Chongqing, China, in December 2011. The 229 full papers presented were carefully reviewed and selected from 745 submissions. The papers address topics such as communication systems; accounting and agribusiness; information education and educational technology; manufacturing engineering; multimedia convergence; security and trust computing; business teaching and education; international business and marketing; economics and finance; and control systems and digital convergence.

The NIPS '17 Competition: Building Intelligent Systems Sergio Escalera,Markus Weimer,2018-09-27 This book summarizes the organized competitions held during the first NIPS competition track. It provides both theory and applications of hot topics in machine learning, such as adversarial learning, conversational intelligence, and deep reinforcement learning. Rigorous competition evaluation was based on the quality of data, problem interest and impact, promoting the design of new models, and a proper schedule and management procedure. This book contains the chapters from organizers on competition design and from top-ranked participants on their proposed solutions for the five accepted competitions: The Conversational Intelligence Challenge, Classifying Clinically Actionable Genetic Mutations, Learning to Run, Human-Computer Question Answering Competition, and Adversarial Attacks and Defenses.
