Airplanes of World War II Nancy Robinson Masters,1998 A brief explanation of each of the alphabetically arranged terms relating to military planes used during World War II provides an overview of the subject.

Wings of Gold Gerald Astor,2007-12-18 From critically acclaimed military historian Gerald Astor comes Wings of Gold, the first account of how the airplane transformed the U.S. Navy and paved the way to victory in the Pacific in World War II. Astor tracks that fateful journey from its humble beginnings in 1910 when Eugene Ely flew the very first plane off the deck of a U.S. Navy ship to the unprecedented air combat missions that helped defeat the

Japanese. Few naval aviators in World War II realized that when they earned their wings of gold they were about to become test pilots for a whole new kind of combat. In their own words, these courageous fliers describe the life-and-death air battles that defined the revolution in naval strategy that rose from the ashes of Pearl Harbor, when fighter pilots watched in horror as Japanese carrier-launched aircraft bombed their planes and airfields into smoking rubble. While following the pilots' firsthand reports of air strikes and blazing dogfights across the islands and atolls of the Pacific, Astor explores the ways the U.S. Navy began its momentous transformation before the war. Later, the critical role of aircraft carriers in the stunning U.S. victory at Midway sounded the death knell for conventional naval warfare, yet the public, the press, the Army, and even the president's advisors refused to recognize the new reality. In fact, only a few in the Navy understood that a new era had begun that would change the face of war forever. The young Americans who fought the deadly duels against Imperial Japanese forces high over the Pacific gave everything they had to the war effort, and many made the supreme sacrifice. Wings of Gold pays tribute to their courage, daring, and selfless dedication. Vividly told, thoroughly researched, and filled with stirring accounts of the Pacific War's greatest air battles, Wings of Gold is an important addition to the annals of World War II aerial combat.

Warbird Factory John M. Fredrickson, 2015-09-10 Explore the WWII history of the company that later became a part of Boeing and made more aircraft from 1938 to 1944 than any other company in the United States. During World War II, Los Angeles was the ultimate boom town. By the end of the war, the L.A. area had produced 17 percent of all of America's war needs. North American Aviation, Inc. (NAA), operating out of their main Inglewood, California, plant, which is south of and adjacent to the city, was a key player in that work. From 1938 to 1944, NAA built over 40,000 aircraft, more than any other company in the United States. The bulk of them were of three iconic types designed by NAA: - The P-51 Mustang, arguably the best fighter of WWII. - B-25 Mitchell medium bombers, which saw worldwide combat. - Two-seat military pilot trainers, such as the AT-6 Texan. This is a fascinating story of a remarkable time in aviation history, when American businesses helped fund the arsenal of democracy that helped defeat the Axis powers. Warbird Factory tells this story with over 200 photographs, many of which come directly from the NAA/Boeing archives, where they have resided since WWII. This is an essential book for anyone interested in warbirds, aviation, Boeing/NAA, WWII, and/or the history of Southern California!

American Bomber Aircraft Development in World War 2 Bill Norton, 2012 This title gives a new perspective on the development of US bomber aircraft during World War 2. It reveals how the intense combat pressures of the war accelerated the scientific and technological advances of aeronautics, propulsion, aircraft systems, avionics and ordnance. Extensively researched, this detailed study of both the US Army and Naval air forces is packed with three-view drawings and rare photographs including many little-known experimental aircraft plus unusual variants, with every aircraft illustrated. The book follows a logical path to show how projects were selected from the multitude of design concepts and proposals put forward at the time. This enables the author to give detailed coverage of the programmes that advanced beyond the preliminary stages and contributed to the rapid developments in all aspects of bomber design during the war. The author discusses the technological maturation of US bombers with emphasis on high technology and experimental models. The war years were particularly noted for the rapid advance of electronic navigation, communications, radar, and electronic warfare that greatly aided mission success. The bold moves to long-range heavy bombers and super-heavy intercontinental bombers (the latter solely an American undertaking) further spurred system-intensive aircraft that were important transitions to the jet bombers that followed. How all this work contributed to actual fielded weapon systems is of particular note, with

discussions of failures, course changes, and close-run competitions. The effects of interaction with other Allies, knowledge of enemy systems and the reaction by the US and Allied forces to their introduction, and the effect of mobilizing the nation's industries for total war are also examined. The book concludes with an examination of the ultimate achievement of Allied air superiority in the war and its dependence on all of these factors, together with consideration of the effects of emergency measures, haste, budgets, resources, evolving doctrine and strategy, the general course of the war and leadership biases.

Flying Warbirds Cory Graff, 2014-11-01 Get a comprehensive look at how World War II was fought from the air. Do you want to get an up-close look at some of the rarest airplanes in the world? Are you curious about combat aircraft from World War II? In deluxe hard-back volumes, Flying Warbirds brings U.S., British, German, Russian and Japanese fighting planes from the 1930s and 1940s together, complete with detailed photographs to delight every aeronautics connoisseur. The airplanes at the Flying Heritage Collection were created at a time when aeronautical discovery had evolved to aviation mastery. Finely crafted by distinguished design bureaus with the leading technologies of the 1930s and 1940s, the main emphasis of the collection includes combat aircraft from World War II. In 1998, Paul G. Allen began acquiring and preserving these iconic warriors and workhorses, many of which are the last of their kind. Allen's passion for aviation and history, and his awareness of the increasing rarity of original WWII aircraft, motivated him to restore these artifacts to the highest standard of authenticity. Periodically, one or more of the exhibits are temporarily absent to participate in an event, for maintenance, or for continuing restoration. Experience one of the world's top airplane collections any time you like through Flying Warbirds. Photographs include cockpit shots, exterior museum shots, historic photographs, and breathtaking contemporary flying shots from photographers like award-winning John Dibbs. Flying Warbirds is the definitive guide to everything you want to know about this fascinating period in aeronautics and military history.

The American Aircraft Factory in World War II Bill Yenne, 2010-09-10 Few industrial phenomena have been as dramatic as the United States' mid-20th-century shift from peacetime to wartime production. The American Aircraft Factory in World War II documents the production of legendary warbirds by companies like Boeing, North American, Curtiss, Consolidated, Douglas, Grumman, and Lockheed. It was a production unmatched by any other country and a crucial part of why the allies won the war. Author Bill Yenne considers the prewar governmental acts that got the plants rolling, as well as the gender shift that occurred as women entered the work force like never before. He also describes the construction of megafactories like Willow Run, factory design considerations, and the postwar conversion back to peacetime production. Illustrated with 175 period photographs—including 50 rare color photos never before seen in print.

Flying American Combat Aircraft of World War II Robin D. S. Higham, 2004 Presents a collection of illustrated photographs and narratives that describes the U.S. combat aircraft of World War Two written by the former aviators who flew those missions.

Japanese Aircraft of World War II Thomas Newdick, 2017 Illustrated with detailed artworks of Japanese aircraft and their markings, Japanese Aircraft of World War II is a detailed guide to all the aircraft deployed by the Japanese military from the Second Sino-Japanese War to the surrender in the Pacific in August 1945. Organized

alphabetically by manufacturer, this book includes every type of aircraft, from fighters to seaplanes, bombers, reconnaissance aircraft, torpedo bombers and carrier aircraft. All the best-known types are featured, such as the Mitsubishi G4M 'Betty', Nakajima B6N2 Tenzan, Aichi B7A2 Ryusei torpedo bomber and the world-famous Mitsubishi A6M 'Zero' fighter. The entries are accompanied by exhaustive captions and specifications. The guide is illustrated with profile artworks, three-views, and special cutaway artworks of the more famous aircraft in service, such as the Aichi D3A1 'Val', Mitsubishi A6M2 Reisen, and Nakajima Ki.27 'Nate'. Illustrated with more than 120 artworks, Japanese Aircraft of World War II is an essential reference guide for modellers and enthusiasts with an interest in military aircraft of World War II.

Great Aircraft of WWII Alfred Price, Mike Spick, 1997 With this book, the authors offer descriptions of six of the most famous planes of World War Two. For each plane, the book traces design and development, service record, and includes eyewitness accounts from the pilots who flew in them

Hidden Warbirds Nicholas A. Veronico, Nick Veronico, 2013-06-17 Veronico explores the romantic era of World War II warbirds and the stories of some of its most famous wrecks, including the Swamp Ghost (a B-17E which crashed in New Guinea in the early days of World War II and which was only recently recovered), and Glacier Girl (a P-38, part of The Lost Squadron, which crashed in a large ice sheet in Greenland in 1942). Throughout, Veronico provides a history of the aircraft, as well as the unique story behind each discovery and recovery with ample illustrations.

Douglas XB-19 William Wolf, 2021-10-28 In 1935 the USAAC wanted to build a potential intercontinental bomber, a 'Guardian of the Hemisphere,' and granted Donald Douglas a contract to build the world's largest bomber. The groundwork for the intercontinental bomber had been laid in the previous two decades by the courageous military and civilian pilots who risked their lives to set new distance and endurance records. After World War I the future Axis and Allied nations built larger aircraft and finally during World War II Germany and Japan became intent on developing intercontinental bomber to retaliate against America. While the XB-19 never flew as an intercontinental bomber or even as a combat bomber; its contributions as a 'Flying Laboratory' significantly influenced the development of the Consolidated B-36 Peacemaker, the world's first true intercontinental bomber. Since the XB-19 project was top secret and there was only one example built there is little information remaining for researchers. Over the years Bill Wolf has collected the largest quantity of XB-19 material and a number of photographs, including a copy of the original Army Air Force acceptance of the aircraft, first-hand narratives of its first flight, and other USAAC and Douglas Company documents. This book provides a superbly illustrated history of the XB-19 intercontinental bomber and the text is supported by previously unpublished photographs.
