Bert Myers

Werner Schuster René Harather, Wittigo Keller, 2012 Werner Schuster was a doctor long before he became an artist--but it was a childhood fascination with photography that drove him to study radiology in the first place, so it's only fitting that he should now be one of the most versatile and interesting artists working with x-ray photography today. This volume presents full-color reproductions of Schuster's photographs along with those of other photographers, from the pioneering x-ray creators of 1895 to present-day artists working in the medium. An essay by René Harather tells the history of x-ray photography and highlights the most important developments and proponents of the genre since its discovery. The second part of the book turns to Schuster's work, showing how he has expanded the boundaries of the medium and made creative use of the interplay between traditional and x-ray photography. A fascinating look at a stunning marriage of art and science, X-Ray is the first comprehensive representation of the history of x-ray photography.

The X-ray; Or, Photography of the Invisible and Its Value in Surgery

William James Morton, 1896

X-ray Nick Veasey, 2013 Using security scanners and x-ray machines, Veasey creates beautiful, unsettling, inside-out images that reveal the intricacy of everyday objects, animals, and plants. The process may take weeks or months, but the results speak for themselves. Viking Studio

Beyond Light Albert Koetsier, 2014-11-22 Everybody knows that you need light to be able to see things. But is that really true? The doctor “sees” the unborn baby by using ultrasound. And in a slightly different way so does the bat. The air traffic controller “sees” the oncoming plane by using radar. Soldiers use heat wave to “see” the hidden enemy. Then of course the artist “sees” by using his imagination. And there are more examples: the scanning microscope uses electrons to “see” very small animals, etc. So, seeing with light is just one way of perceiving the world around you. The images in this book are made by using x-rays (the x-rays for finding broken bones). And you will see that x-rays help you see the world in another “light”.

Beyond Light , 2014

Studies in the Technique of X-ray Photography Luther Herbert Lyndrup, 1932

X-Ray , 1999-10-01 World renowned makeup artist Francois Nars started photographing just two years ago. Deciding to art direct his own marketing campaign, Nars started casting and shooting models. The results were smashing: soon ads appeared in W, Harpers Bazaar, and Allure, featuring stunning full-frame images of strikingly elegant women, in very untraditional casting, showcasing his new, blazing hot NARS line of cosmetics. The famed designer decided to expand his vision: create an enormous art book with over two hundred richly stylized presentations of elegance, featuring his favorite personalities from the worlds of fashion, design, film—even passersby on the street: people who personified to Nars the very notion of bold and audacious

chic. Nars then set about travelling the globe and inviting each individual to sit for him, styling each portrait session according to the sitters metier, personality, and elan. The results are simply stunning: 240 immense color portraits-creations, really-extracting the essence, as with an X ray, of the worlds most remarkable individuals: Alexandra Von Furstenberg, Alexander McQueen, Amber Valletta, Angelica Huston, Anna Sui, Betsy Bloomingdale, Boy George, Bridget Fonda, Dave Navarro, Donatella Versace, Eartha Kitt, Francesco Clemente, Grace Jones, Hamish Bowles, Isabella Rossellini, Ivanka Trump, Jacqueline de Ribes, Juliette Lewis, Kate Moss, Lauren Hutton, Lauryn Hill, Marc Jacobs, Paloma Picasso, Penny Marshall, Polly Mellen, Princess Marie-Chantal of Greece, RuPaul Charles, Stephanie Seymour, Sylvia Miles, The Divine David, Tim Burton, Verushka, and many, many others. X-Ray is not fashion photography: it is a portraiture of style that is meta-fashion.

Built From Scratch: Adventures In X-ray Film Photography With A Homemade

11x14 View Camera Scott Wittenburg, 2019-04-27 The host of Photography 101 chronicles how he created an 11x14 view camera from scratch and uses it to photograph black and white images with X-ray film. An illustrated account of the design and construction of his fully functional large format camera using only standard carpentry tools is presented in detail. What follows is the teacher's quest to fine-tune his creation while taking studio portraits of his photo students over a three-year period. Throughout this process he shares critiques of his un-retouched darkroom photos, tips on X-ray film processing, creative lighting techniques, alternative processes and much more.

Proceedings of the Symposium on Medical X-ray Photo-optical Systems Evaluation, October 21-23, 1974, Columbia, Maryland Kenneth E. Weaver, 1975

Proceedings of the Symposium on Medical X-ray Photo-optical Systems Evaluation, October 21-23, 1974, Columbia, Maryland Kenneth E. Weaver, Robert Ferdinand Wagner, David J. Goodenough, 1975 For the past several years a small group within the Division, which now constitutes the Image Analysis Section of the Medical Physics Branch, has been developing analytical methodology for evaluating the imaging performance of medical diagnostic x-ray systems. This

includes the development and evaluation of a wide variety of methods of analysis for appraising the health impact of radiation exposure. Many aspects of this performance have substantial impact on the patient radiation dose required for a given amount of diagnostic information and on the amount and quality of that information which can be obtained. As a result of our early work, and studies of the literature in this field, we concluded that an international symposium devoted exclusively to this topic was in order. This present volume represents the culmination of our efforts toward that end. Kenneth E. Weaver, M.S. and Robert F. Wagner, Ph.D. of the Image Analysis Section and Assistant Professor David J. Goodenough, Ph.D. of The Johns Hopkins Medical Institutions.

Inner Beauty of Nature Bert Myers, 2007 This is a 160 page, 10 X 10.5 inch full color hard cover coffee table book about the use of ionizing radiation to produce art images. It is the first book on the subject which includes both the history of the art and the technique in enough detail that anyone with access to an X-ray machine can duplicate the work. There is even a section on where to find a suitable X-ray machine for part time use. There are 30 color prints and 45 black and white ones and full details on how to convert B+W images to color ones. The final chapter contains images and contact info on the 9 other practitioners of the art who were working in 2007. - amazon.com.

Own composition, use composition, and make composition your own in your photographs!

Of all the magical elixirs that make up a successful photograph, composition is perhaps the most fundamental, and at the same time the most elusive. What makes a composition “good”? It’s hard to define exactly, but we instinctively recognize good composition when we see it. There is an undeniable emotional response when a composition resonates with and complements the subject matter of an image.

But traditional attempts to define “good composition” and to pass on rules for good compositional construction are often doomed to failure. The truth is, there are no hard and fast rules. Rules eliminate experimentation and spontaneity, which are crucial for creating compelling, dynamic, and exciting compositions. The best compositions contain an element of the unexpected. “Expect the unexpected!” is perhaps the only viable “rule” of composition. To create exciting compositions, you must have a willingness to embrace serendipity and change as part of your artistic practice. After all, composition is a process, not a result.

In *Composition & Photography*, photographer and bestselling author Harold Davis teaches you how to perceive patterns and abstractions and incorporate them into your image-making process. If one of the goals of photography is to show viewers things that are new, or things they haven't seen before, or things they have seen many times but need to see anew, then it's with the thoughtful and considered use of composition that you do that.

In this book, you'll learn how to reduce your subject matter to the fundamentals, and to show familiar subjects in unfamiliar, novel ways. Harold covers topics and themes such as:

- Lines and circles
- Rectangles
- Combinations
- Repetition
- Symmetry and asymmetry
- Abstraction
- Entering and exiting

- Vanishing points and perspective
- Emphasis
- Designing within a frame
- Creating order from chaos

Composition & Photography will help you find the tools and visual vocabulary to creatively design your photographs. Regardless of the genre and kind of photography you practice, you'll learn to create powerful compositions that incorporate structure and form into your work in ways that best support your images. Along the way, Harold shows and discusses his own work relating to each compositional element or theme he's exploring. And featured throughout the book are exercises about flexibility and process, designed to spur your creativity and help you begin an internal creative discussion.

"My goal as a photography teacher and writer about photography is to inspire and to help you become the best and most creative photographer and image-maker that you can be."

—Harold Davis

"Harold Davis is a force of nature—a man of astonishing eclectic skills and accomplishments."
