Seven Mobile Apps in Seven Weeks Tony Hillerson, 2016 Answer the question Can we build this for ALL the devices? with a resounding YES. Learn how to build apps using seven different platforms: Mobile Web, iOS, Android, Windows, RubyMotion, React Native, and Xamarin. Find out which cross-platform solution makes the most sense for your needs, whether you're new to mobile or an experienced developer expanding your options. Start covering all of the mobile world today. Understanding the idioms, patterns, and quirks of the modern mobile platforms gives you the power to choose how you develop. Over seven weeks you'll build seven different mobile apps using seven different tools. You'll start out with Mobile Web; develop native apps on iOS, Android, and Windows; and finish by building apps for multiple operating systems using the native cross-platform solutions RubyMotion, React Native, and Xamarin. For each platform, you'll build simple, but non-trivial, apps that consume JSON data, run on multiple screen sizes, or store local data. You'll see how to test, how to build views, and how to structure code. You'll find out how much code it's possible to share, how much of the underlying platform you still need to know, and ultimately, you'll get a firm understanding of how to build apps on whichever devices your users prefer. This book gives you enough first-hand experience to weigh the trade-offs when building mobile apps. You'll compare writing apps on one platform versus another and understand the benefits and hidden costs of cross-platform tools. You'll get pragmatic, hands-on experience writing apps in a multi-platform world. What You Need: You'll need a computer and some experience programming. When we cover iOS, you'll need a Mac, and when we cover Windows Phone you'll need a computer with Windows on it. It's helpful if you have access to an iPhone, Android phone, and Windows Phone to run the examples on the devices where mobile apps are ultimately deployed, but the simulators or emulator versions of those phones work great.

Mobilized S. C. Moatti, 2016-05-02 That person slumped over her cell phone is disengaged, isolated, lost in her own little world, right? Wrong, says SC Moatti. She's highly engaged - she's having a text conversation with a friend in Europe, playing a game with another, and looking for a good place to go to dinner with a third. Mobile technology has become such an integral part of how we interact that for many people losing a cell phone is like losing a limb. And the most successful mobile apps that are precisely those that enhance and multiply the frequency and power of our real - world interactions. Moatti - a technologist and industry insider - says these kinds of mobile apps adhere to three universal principles: they must have a simple design, enable the user to personalize them, and be continually improved by their makers through relentless attention to analytics. She uses examples from a host of great mobile app creators - Facebook, Yelp, Lyft, Tinder, Aerbnnb, Trulia, WhatsApp, and more - to demonstrate how it's done. Even as technology evolves and smartphones are replaced by smaller mobile devices such as watches and contact lenses, these three principles will remain evergreen. The market is full of how - to books for creating apps, but no works examine what qualities make for great mobile products. Until now.
