Case Studies in Japanese Management Parissa Haghirian,Philippe Gagnon,2011-09-30 This book provides a new opportunity for corporate strategy analysis within a Japanese context. It is the first academic textbook to be published in English which regroups case studies to emphasize key concepts in Japanese management. Where previous literature has set a separate focus on cultural, managerial and strategic variables, a holistic look is now taken at their influence on effective decision-making. Over 11 detailed cases depict issues in entering the Japanese market, strategic issues when managing in Japan, marketing management, crisis management, cross-cultural encounters and future technologies. The sophistication and depth of these studies, along with their teaching notes, provide the basis for pragmatic analysis. The mysticism surrounding Japanese culture seems magnified by the success of Japanese companies abroad, and the shortcomings of many MNEs that entered Japan ineffectively. Studying the empirical implications of these issues is a helpful exercise to develop more acute management reflexes in a Japanese setting. The book's carefully laid out cases will benefit business and humanities students who are researching Japan, as well as professionals who work within this sphere.

Modeling Online Auctions Wolfgang Jank,Galit Shmueli,2010-12-01 Explore cutting-edge statistical methodologies for collecting, analyzing, and modeling online auction data Online auctions are an increasingly important marketplace, as the new mechanisms and formats underlying these auctions have enabled the capturing and recording of large amounts of bidding data that are used to make important business decisions. As a result, new statistical ideas and innovation are needed to understand bidders, sellers, and prices. Combining methodologies from the fields of statistics, data mining, information systems, and economics, Modeling Online Auctions introduces a new approach to identifying obstacles and asking new questions using online auction data. The authors draw upon their extensive experience to introduce the latest methods for extracting new knowledge from online auction data. Rather than approach the topic from the traditional game-theoretic perspective, the book treats the online auction mechanism as a data generator, outlining methods to collect, explore, model, and forecast data. Topics covered include: Data collection methods for online auctions and related issues that arise in drawing data samples from a Web site Models for bidder and bid arrivals, treating the different approaches for exploring bidder-seller networks Data exploration, such as integration of time series and cross-sectional information; curve clustering; semi-continuous data structures; and data hierarchies The use of functional regression as well as functional differential equation models, spatial models, and stochastic models for capturing relationships in auction data Specialized methods and models for forecasting auction prices and their applications in automated bidding decision rule systems Throughout the book, R and MATLAB software are used for illustrating the discussed techniques. In addition, a related Web site features many of the book's datasets and R and MATLAB code that allow readers to replicate the analyses and learn new methods to apply to their own research. Modeling Online Auctions is a valuable book for graduate-level courses on data mining and applied regression analysis. It is also a one-of-a-kind reference for researchers in the fields of statistics, information systems, business, and marketing who work with electronic data and are looking for new approaches for understanding online auctions and processes. Electronic Commerce 2018 Efraim Turban,Jon Outland,David King,Jae Kyu Lee,Ting-Peng Liang,Deborrah C. Turban,2017-10-12 This new Edition of Electronic Commerce is a complete update of the leading graduate level/advanced undergraduate level textbook on the subject. Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even exceeding non-Internet trades. However, EC is not just about buying and selling; it also is about electronically communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The

most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook , LinkedIn and Instagram, and the trend toward conducting EC with mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social commerce, social collaboration, shared economy, innovations, and mobility.

Strategic Management Arthur A. Thompson,Alonzo J. Strickland,2003 This text is renowned for its strong cases, and comprehensive reading. This edition provides new cases covering high profile companies, globally competitive industries, entrepreneurial businesses, and public companies.

Relates how necessary it is for companies to conduct business while taking a global perspective to their operations.

Electronic Commerce Efraim Turban,David King,Jae Kyu Lee,Ting-Peng Liang,Deborrah C. Turban,2015-01-29 Throughout the book, theoretical foundations necessary for understanding Electronic Commerce (EC) are presented, ranging from consumer behavior to the economic theory of competition. Furthermore, this book presents the most current topics relating to EC as described by a diversified team of experts in a variety of fields, including a senior vice president of an e-commerce-related company. The authors provide website resources, numerous exercises, and extensive references to supplement the theoretical presentations. At the end of each chapter, a list of online resources with links to the websites is also provided. Additionally, extensive, vivid examples from large corporations, small businesses from different industries, and services, governments, and nonprofit agencies from all over the world make concepts come alive in Electronic Commerce. These examples, which were collected by both academicians and practitioners, show the reader the capabilities of EC, its cost and justification, and the innovative ways corporations are using EC in their operations. In this edition (previous editions published by Pearson/Prentice Hall), the authors bring forth the latest trends in e-commerce, including social businesses, social networking, social collaboration, innovations, and mobility.

Crime Science and Digital Forensics Anthony C. Ijeh,Kevin Curran,2021-09-15 This volume is a collation of articles on counter forensics practices and digital investigative methods from the perspective of crime science. The book also shares alternative dialogue on information security techniques used to protect data from unauthorised access and manipulation. Scandals such as those at OPCW and Gatwick Airport have reinforced the importance of crime science and the need to take proactive measures rather than a wait and see approach currently used by many organisations. This book proposes a new approach in dealing with cybercrime and unsociable behavior involving remote technologies using a combination of evidence-based disciplines in order to enhance cybersecurity and authorised controls. It starts by providing a rationale for combining selected disciplines to enhance cybersecurity by discussing relevant theories and highlighting the features that strengthen privacy when mixed. The essence of a holistic model is brought about by the challenge facing digital forensic professionals within environments where tested investigative practices are unable to provide satisfactory evidence and security. This book will be of interest to students, digital forensic and cyber security practitioners and policy makers. It marks a new route in the study of combined disciplines to tackle cybercrime using digital investigations and crime science.

Experimental Business Research Amnon Rapoport,Rami Zwick,2005-10-20 Volume II & III of Experimental Business Research include original papers that were presented at the Second Asian Conference on Experimental Business Research held at the Hong Kong University of Science and Technology (HKUST) on December 16-19, 2003. The conference was organized by the Center for Experimental Business Research (cEBR) at HKUST and was chaired by Professors Amnon Rapoport and Rami Zwick. Experimental Business Research adopts laboratory based experimental economics

methods to study an array of business and policy issues spanning the entire business domain including accounting, economics, finance, information systems, marketing and management and policy. Experimental economics is an established term that refers to the use of controlled laboratory-based procedures to test the implications of economic hypotheses and models and discover replicable patterns of economic behavior. We have coined the term Experimental Business Research in order to broaden the scope of experimental economics to encompass experimental finance, experimental accounting, and more generally the use of laboratory-based procedures to test hypotheses and models arising from research in other business related areas, including information systems, marketing, and management and policy. The chapters included in these volumes reflect the domain diversity of studies in the experimental business research field.
