**The Platform Economy** Maxim I. Inozemtsev,Elina L. Sidorenko,Zarina I. Khisamova,2022-09-27 Digital ecosystems formed on the basis of digital platforms are significantly transforming modern reality. Today it is difficult to imagine life without LinkedIn, Facebook, or Amazon. The total income generated by them is estimated at trillions of dollars. Digital platforms are the main driving force of the digital economy. The impact and growth of digital platforms on social and economic processes today is difficult to overestimate. The pandemic has further deepened their influence on society, as almost all social communication and economic activity has moved to online format on digital platforms. The growth of the share of digital platforms in various segments of the economy was so rapid that regulators around the world were not ready for such large-scale transformations. All this has caused a number of crisis phenomena, when IT giants have grown into an independent branch of “power”, which has direct access to the personal and financial data of millions of citizens, and moreover, have the opportunity to directly influence them. This monograph is a unique publication in which, for the first time, a large-scale and sufficiently deep team of experts and scientists from various countries of the world studied in detail the multidimensional phenomenon of the “platform economy” and the measures taken by states to regulate these processes. The book will be interesting to a wide range of readers interested in the problems of the development of digital platforms and the developing branch of law and science – the law of digital platforms.

The book provides a thorough theoretical introduction to the link between labour mobility and informality and comprises convincing case studies from a wide range of post-socialist countries. Overall, it highlights the importance of trust, transnational networks, and digital technologies in settings where the rules governing economic and social activities of mobile workers are often unclear and flexible.

**Great Power Politics in the Fourth Industrial Revolution** Glenn Diesen,2021-03-25 Why and how will the fourth industrial revolution impact great power politics? Here, Glenn Diesen utilizes a neoclassical approach to great power politics to assess how far the development of AI, national and localized technological ecosystems and cyber-warfare will affect great power politics in the next century. The reliance of modern economies on technological advances, Diesen argues, also compels states to intervene radically in economics and the lives of citizens, as automation radically alters the economies of tomorrow. A groundbreaking attempt to contextualize the fourth industrial revolution, and analyse its effects on politics and international relations.

**Revolutionizing Sustainability Education** Ekaterina Ivanova, Isabel Rimanoczy, 2021-12-30 There is growing awareness among leading responsible management scholars and practitioners that understanding global wicked problems is insufficient in effecting lasting engagement and changed behaviors. Research indicates that to impact behavior, the mindset has to shift, which leaves the question: How do you shift a mindset? This book guides educators and practitioners, their students and colleagues to take action on finding urgent solutions to the grand challenges stated in the 17 UN Sustainable Development Goals. A Sustainability Mindset is a way of thinking and being that results from a broad understanding of the ecosystem, from social sensitivity and an introspective focus on our personal values and higher self, which finds its expression in actions for the greater good. By promoting a mindset shift, educators in very diverse contexts are laying the foundation for a resilient future. The book presents a collection of over 150 student voices depicting a transformative experience and a shift in their mindset. Seventeen educator/student teams of contributing authors from across five continents describe the activity that prompted those students' reflections, and the conceptual frameworks that played a role in the selection of the learning goals and activities. The book is written with academic and corporate educators, reflective practitioners, consultants, coaches, trainers and students in mind, and is invaluable in guiding the

process of developing a sustainability mindset among participants in the training process.

**Third International Conference on Image Processing and Capsule Networks** Joy Iong-Zong Chen, João Manuel R. S. Tavares, Fuqian Shi, 2022-07-28 This book provides a collection of the state-of-the-art research attempts to tackle the challenges in image and signal processing from various novel and potential research perspectives. The book investigates feature extraction techniques, image enhancement methods, reconstruction models, object detection methods, recommendation models, deep and temporal feature analysis, intelligent decision support systems, and autonomous image detection models. In addition to this, the book also looks into the potential opportunities to monitor and control the global pandemic situations. Image processing technology has progressed significantly in recent years, and it has been commercialized worldwide to provide superior performance with enhanced computer/machine vision, video processing, and pattern recognition capabilities. Meanwhile, machine learning systems like CNN and CapsNet get popular to provide better model hierarchical relationships and attempts to more closely mimic biological neural organization. As machine learning systems prosper, image processing and machine learning techniques will be tightly intertwined and continuously promote each other in real-world settings. Adopting this trend, however, the image processing researchers are faced with few image reconstruction, analysis, and segmentation challenges. On the application side, the orientation of the image features and noise removal has become a huge burden.
