Medically Challenging Patients Undergoing Cardiothoracic Surgery Neal Cohen,2009 This monograph reviews selected topics related to the care of medically challenging patients who present for cardiothoracic surgery. It includes management strategies to optimize neurologic outcome and clinical considerations for patients with coexisting medical conditions, such as carotid disease, hypertension, hyperglycemia, dialysis-dependent renal disease, and pulmonary hypertension. It reviews clinical considerations for patients with heparin-induced thrombocytopenia, pregnant patients requiring cardiac surgery with cardiopulmonary bypass, and obese patients. Coverage includes considerations for selected patient populations requiring thoracic surgery, such as the patient who requires lung isolation but has a difficult airway, the patient with an anterior mediastinal mass, or the patient with an invasive tumor of the vena cava. Pioneers of Cardiac Surgery William S. Stoney,2008-01-01 This book is a history of cardiac surgery in the words of the first generation of surgeons. Heart operations today are quite common and relatively low-risk, but in the beginning it was just the opposite. Cardiac operations were reserved for desperately ill patients. The author documents this dramatic transition with profiles of 38 surgeons who were active between 1940 and 1985. The profiles are edited transcripts of interviews videotaped between 1996 and 2004. They tell of the development of new techniques such as the blue baby operation, the first heart-lung machine, the first artificial heart valve, and the first coronary bypass operation. They also tell the unusual life stories of the surgeons and allude to professional and institutional rivalries. A particularly valuable part of the book is the author's brief history of cardiac surgery, designed to orient the reader for reading the profiles that follow. - Publisher.
