The Zen Mama Sarah Ivens,2020-01-30 Let go of parenting expectations and fears to raise courageous, confident children. The Zen Mama philosophy is that mother and child complement each other in adventures and experiences, always putting safety first but without getting caught up in the anxieties, drama, impossible expectations and mental baggage that too often comes along with modern parenting. Learning to become a Zen Mama will help you grow and nurture a Zen Child - someone who isn't afraid to be different, who can stand up for himself or his friends, and can travel the

world and experiment with new things without being overwhelmed with self-doubt or being scared. Full of facts, actionable advice and practical tips, this book will be about combining the heart and the head with what works for you and your family, not comparing yourselves to others or meeting a societal standard. It will support and nurture the mother's journey like a wise and sympathetic friend and offers ideas and experience rather than judgement. The Zen Mama will help you to find your purpose as a mother. It will instil the self-belief you need to help create a resilient, creative, caring and smart child - and help to survive the journey.

Zen Wrapped in Karma Dipped in Chocolate Brad Warner,2010-06-23 How does a real-life Zen master – not the preternaturally calm, cartoonish Zen masters depicted by mainstream culture – help others through hard times when he’s dealing with pain of his own? How does he meditate when the world is crumbling around him? Is meditation a valid response or just another form of escapism? These are the questions Brad Warner ponders in Zen Wrapped in Karma Dipped in Chocolate. During a year that Warner spent giving talks and leading retreats across North America, his mother and grandmother died, he lost his dream job, and his marriage fell apart. In writing about how he applied the Buddha’s teachings to his own real-life suffering, Warner shatters expectations, revealing that Buddhism isn’t some esoteric pie-in-the-sky ultimate solution but an exceptionally practical way to deal with whatever life dishes out.

The Zen of Exotic Computing Peter M. Kogge,2022-12-07 The Turing/von Neumann model of computing is dominant today but is by no means the only one. This textbook explores an important subset of alternatives, including those such as quantum and neuromorphic, which receive daily news attention. The models are organized into distinct groups. After a review of the Turing/von Neumann model to set the stage, the author discusses those that have their roots in the Turing/von Neumann model but perform potentially large numbers of computations in parallel; models that do away with the preplanned nature of the classical model and compute from just a statement of the problem; others that are simply mathematically different, such as probabilistic and reversible computation; models based on physical phenomena such as neurons; and finally those that leverage unique physical phenomena directly, such as quantum, optical, and DNA-based computing. Suggested readings provide a jumping-off point for deeper learning. A supplemental website contains chapters that did not make it into the book, as well as exercises, projects, and additional resources that will be useful for more in-depth investigations. The Zen of Exotic Computing is intended for computer science students interested in understanding alternative models of computing. It will also be of interest to researchers and practitioners interested in emerging technology such as quantum computing, machine learning, and AI.
