Blended Learning Barbara Allan, 2007 This essential guide should be on the desk of any library and information professional, records manager, archivist or knowledge manager involved in planning and introducing an ERM system, whether in a public or private sector organization. Information professionals currently face the challenge of providing end-user education and staff training to very large and diverse groups, whilst integrating the use of ICT into their teaching. But there seems to be a tendency within the literature to focus solely on face-to-face learning or on e-learning, and this is a lost opportunity. This book offers a new blended learning approach, combining the two techniques to make best use of the advantages of each while minimizing the disadvantages. It provides information professionals with a practical guide to the design and delivery of such training programmes, illustrated with a range of library-based examples, checklists and case studies. Many organizations establish projects, sometimes using external funding, as a means of developing their education and training provision, and the book provides a practical overview of this subject in the context of blended learning. Key areas covered include: technologies in the classroom virtual communication tools integrated learning environments websites and web tools models of teaching and learning planning and designing learning activities individual and group learning coaching and mentoring engaging with communities of interest and practice managing learning and teaching projects. Readership: This unique book will be of great value to any information professionals involved in establishing and delivering end-user education and staff development, whatever their previous experience. It will also benefit staff developers in school, college and higher education, library and information students, independent consultants and trainers, and information suppliers such as

Teaching for Deeper Learning Jay McTighe, Harvey F. Silver, 2020-01-22 Far too often, our students attain only a superficial level of knowledge that fails to prepare them for deeper challenges in school and beyond. In Teaching for Deeper Learning, renowned educators and best-selling authors Jay McTighe and Harvey F. Silver propose a solution: teaching students to make meaning for themselves. Contending that the ability to earn understanding will equip students to thrive in school, at work, and in life, the authors highlight seven higher-order thinking skills that facilitate students' acquisition of information for greater retention, retrieval, and transfer. These skills, which cut across content areas and grade levels and are deeply embedded in current academic standards, separate high achievers from their low-performing peers. Drawing on their deep well of research and experience, the authors - Explore what kind of content is worth having students make meaning about. - Provide practical tools and strategies to help teachers target each of the seven thinking skills in the classroom. - Explain how teachers can incorporate the thinking skills and tools into lesson and unit design. - Show how teachers can build students' capacity to use the strategies independently. If our goal is to prepare students to meet the rigorous demands of school, college, and career, then we must foster their ability to respond to such challenges. This comprehensive, practical guide will enable teachers to engage students in the kind of learning that yields enduring understanding and valuable skills that they can use throughout their lives.

Convergent Teaching Aaron M. Pallas, Anna Neumann, 2019-12-10 How what we know about K-12 education can revolutionize learning in college. Honorable Mention in the Foreword INDIES Award for Education by FOREWORD Reviews, Winner of the 2021 Bronze IPPY Award for Education II Amid the wide-ranging public debate about the future of higher education is a tension about the role of the faculty as instructors versus researchers and the role of teaching in the mission of a university. What is absent from that discourse is any clear understanding of what constitutes good teaching in college. In Convergent Teaching, masterful professors of education Aaron M. Pallas and Anna Neumann make the case that American higher education must hold fast to its core mission of fostering learning and growth for all people. Arguing that colleges and universities do this best through their teaching function, the book portrays teaching as a professional practice that teachers should actively hone. Drawing on rich research on K-12 classroom teaching, the authors develop the novel idea of convergent teaching, an approach that attends simultaneously to what students are learning and the personal, social, and cultural contexts shaping this process. Convergent teaching, they write, spurs teachers to join students' cognitions with the students' emotions and identities as they learn. Offering new ways to think about how college teachers can support and advance their students' learning of core disciplinary ideas, Pallas and Neumann outline targeted actions that campus administrators, public policy makers, and foundation leaders can take to propel such efforts. Vivid examples of instructors enacting three key principles—targeting, surfacing, and navigating—help bring the idea of convergent teaching to life. Full of research-based, practical ideas for better teaching and learning, Convergent Teaching presents numerous instances of successful

campus-based initiatives. It also sets a bold agenda for disciplinary organizations, philanthropies, and the federal government to support teaching improvement. This book will challenge higher education students while motivating college administrators and faculty to enact change on their campuses.

The practices presented in the book are being used in schools and districts that seek to improve science teaching at scale, and a wide range of science subjects and grade levels are represented.
