Saved from Oblivion Andreas Kitzmann,2004 What lies behind our need to rigorously document the thoughts, deeds, images, and sounds of everyday life? And more curiously, why would anyone want to spend time going over such material? At any given point someone is using a pen, a camera, a web cam, or a computer to document with

varying degrees of detail, personal thoughts, observations, or glimpses of private space and life. And for each of these, there is usually at least one person reading, watching, and even responding. Saved from Oblivion is a comparative analysis of how individuals have used various media technologies to document their everyday lives. More specifically, this book focuses on the major forms of self-documentation that have been in use since the late nineteenth century and covers traditional diaries, snapshot photography, home movies/videos, and web-based media such as web cams and online diaries or journals.

Web Video Tips RD king, Web Video Tips Back in 2002, search engine optimization (SEO) emerged as the web's number one science. It became the key to bagging positions on the first page of relevant search engine results, in effect, resulting to more visitors, more leads, and more sales. Online businessmen rushed to learn the intricacies of this new technique. They discovered proper ways of researching for keywords, on-page adjustments, and link building tactics. Gone were the days when webmasters could just mention a particular keyword a million times and merge the font color with the background, a clever technique which was rendered obsolete by the dawn of the SEO age. <u>Introduction to Video Search Engines</u> David C. Gibbon,Zhu Liu,2008-09-20 The evolution of technology has set the stage for the rapid growth of the video Web: broadband Internet access is ubiquitous, and streaming media protocols, systems, and encoding standards are mature. In addition to Web video delivery, users can easily contribute content captured on low cost camera phones and

other consumer products. The media and entertainment industry no longer views these developments as a threat to their established business practices, but as an opportunity to provide services for more viewers in a wider range of consumption contexts. The emergence of IPTV and mobile video services offers unprecedented access to an ever growing number of broadcast channels and provides the flexibility to deliver new, more personalized video services. Highly capable portable media players allow us to take this personalized content with us, and to consume it even in places where the network does not reach. Video search engines enable users to take advantage of these emerging video resources for a wide variety of applications including entertainment, education and communications. However, the task of information extr- tion from video for retrieval applications is challenging, providing opp- tunities for innovation. This book aims to first describe the current state of video search engine technology and second to inform those with the req- site technical skills of the opportunities to contribute to the development of this field. Today's Web search engines have greatly improved the accessibility and therefore the value of the Web.
