Remembering World War II Anastasia Glawion,2023-03-31 The book demonstrates an evidence-based approach to online memory

practices of World War II. Network analysis is applied to reduce a massive and unreadable dataset of forum texts and user relations. Further, the results are combined with other text analysis methods, such as topic modeling and contrastive stylometric analyses. A sample of discussions from each group is read and categorized. Based on the results, the forum users' memory practices are labelled as empirical, conversational and conservational practices, whereby recent theoretical developments in Memory Studies are considered.

Digital Jesus Robert Glenn Howard,2011-02-16 In the 1990s, Marilyn Agee developed one of the most well-known amateur evangelical websites focused on the "End Times", The Bible Prophecy Corner. Around the same time, Lambert Dolphin, a retired Stanford physicist, started the website Lambert's Library to discuss with others online how to experience the divine. While Marilyn and Lambert did not initially correspond directly, they have shared several correspondents in common. Even as early as 1999 it was clear that they were members of the same online network of Christians, a virtual church built around those who embraced a common ideology. Digital Jesus documents how such like-minded individuals created a large web of religious communication on the Internet, in essence developing a new type of new religious movement—one without a central leader or institution. Based on over a decade of interaction with figures both large and small within this community, Robert Glenn Howard offers the first sustained ethnographic account of the movement as well as a realistic and pragmatic view of how new communication technologies can both empower and disempower the individuals who use them. By tracing the group's origins back to the email lists and "Usenet" groups of the 1980s up to the online forums of today, Digital Jesus also serves as a succinct history of the

development of online group communications.

Expanding Perspectives on Open Science: Communities, Cultures and Diversity in Concepts and Practices L. Chan,F. Loizides,2017-06-20 Twenty-one years ago, the term 'electronic publishing' promised all manner of potential that the Web and network technologies could bring to scholarly communication, scientific research and technical innovation. Over the last two decades, tremendous developments have indeed taken place across all of these domains. One of the most important of these has been Open Science; perhaps the most widely discussed topic in research communications today. This book presents the proceedings of Elpub 2017, the 21st edition of the International Conference on Electronic Publishing, held in Limassol, Cyprus, in June 2017. Continuing the tradition of bringing together academics, publishers, lecturers, librarians, developers, entrepreneurs, users and all other stakeholders interested in the issues surrounding electronic publishing, this edition of the conference focuses on Open Science, and the 27 research and practitioner papers and 1 poster included here reflect the results and ideas of researchers and practitioners with

diverse backgrounds from all around the world with regard to this important subject. Intended to generate discussion and debate on the potential and limitations of openness, the book addresses the current challenges and opportunities in the ecosystem of Open Science, and explores how to move forward in developing an inclusive system that will work for a much broader range of participants. It will be of interest to all those concerned with electronic publishing, and Open Science in particular.

(In)Appropriate Online Behavior Jenny Arendholz,2013-01-17 This descriptive and comprehensive study on the discursive struggle over interpersonal relations in online message boards is located at the fascinating interface of pragmatics and computer-mediated discourse – a research area which has so far not attracted much scientific interest. It sets out to shed light on the question how interpersonal relations are established, managed and negotiated in online message boards by giving a valid overview of the entire panoply of interpersonal relations (and their interrelations), including both positively and negatively marked behavior. With the first part of the book providing an in-depth discussion and refinement of the pivotal theoretical positions of both fields of research, students as well as professionals are (re-)acquainted with the subject at hand. Thus supplying a framework for the ensuing case study, the empirical part displays the results of the analysis of 50 threads (ca. 300,000 words) of a popular British message board.
