Functional Nanostructures and Sensors for CBRN Defence and Environmental Safety and Security Anatolie Sidorenko, Horst Hahn, 2020-03-17 Over the last decade, techniques for materials preparation and processing at nanometer scale have advanced rapidly, leading to the introduction of novel principles for a new generation of sensors and detectors. At the same time, the chemical industry, transport and agriculture produce huge amounts of dangerous waste gases and liquids, leading to soil, air and water contamination. One more modern threat - international terrorism - demands that scientists make efforts to apply new principles and technologies to protect society against chemical, biological, radiological and nuclear (CBRN) attacks and to develop novel effective technologies for the remediation of large contaminated areas. Accordingly, the main goal of this book is to bring together experts (theorists, experimentalists, engineers and technologists) for an extensive discussion covering: novel principles for functional nanostructures and detector fabrication and implementation, the development of novel technologies for the deactivation of CBRN agents, their experimental realization and their application in novel monitoring and control systems, and technological processes for soil and water remediation, with a view to environmental protection and defence against CBRN-based terrorism. In keeping with the book's main goal, the following topics are highlighted and discussed: - Sensors and detectors - detection of chemicals, principles of "artificial nose" and chemical "micro-lab on a chip" design, surface and underground water quality monitoring systems, molecular electronics, superconducting electronic devices, quantum detectors and Qubits. - Environmental protection and CBRN - detection of infrared, microwave, X-ray and terahertz radiation. Principles for novel IR-, UV-, and Terahertz-wave devices for the detection of low-contrast objects. - Novel technological processes for CBRN destruction and deactivation. All these topics are strongly interrelated, both with regard to fundamental aspects and to fabrication and implementation technologies; in addition, they are highly promising for application in novel functional devices, computer logics, sensing and detection of low-concentration chemicals, weak and extremely weak magnetic and microwave fields, infrared and ultraviolet radiation. Given its scope, the book will be a useful and interesting guide for a broad readership of engineers, scientists, PhD students and experts in the area of defence against environmental terrorism.

Social Networks and the Semantic Web Peter Mika, 2007-10-23 Social Networks and the Semantic Web offers valuable information to practitioners developing social-semantic software for the Web. It provides two major case studies. The first case study shows the possibilities of tracking a research community over the Web. It reveals how social network mining from the web plays an important role for obtaining large scale, dynamic network data beyond the possibilities of survey methods. The second case study highlights the role of the social context in user-generated classifications in content, such as the tagging systems known as folksonomies.

The Discursive Construction of European Identities Michał Krzyżanowski, 2010 This book looks at the discursive construction of European identities in a variety of institutional and non-institutional contexts and through a variety of social and political actors. Its multilevel and interdisciplinary approach - rooted in the Discourse-Historical tradition of Critical Discourse Analysis - allows for a comparison of identity constructions at different levels of Europe's social and political organisation and in different modes of communication. The book analyses discourses as diverse as those of the EU politicians, of Europe's national media as well as of migrants living in Europe. It offers a set of integrated models and analytical procedures which bring to the fore the inherent dynamism and complexity of both 'bottom-up' and 'top-down' European identity constructions.

Profiling Machines Greg Elmer, 2003-12-23 The cultural and media studies perspectives on the technology of electronic consumer profiling. In this book Greg Elmer brings the perspectives of cultural and media studies to the subject of consumer profiling and feedback technology in the digital economy. He examines the multiplicity of processes that monitor consumers and automatically collect, store, and cross-reference personal information. When we buy a book at Amazon.com or a kayak from L.L. Bean, our transactions are recorded, stored, and deployed to forecast our future behavior—thus we may receive solicitations to buy another book by the same author or the latest in kayaking gear. Elmer charts this process, explaining the technologies that make it possible and examining the social and political implications. Elmer begins by establishing a theoretical framework for his discussion, proposing a diagrammatic approach that draws on but questions Foucault's theory of surveillance. In the second part of the book, he presents the historical background of the technology of consumer profiling, including such pre-electronic tools as the census and the warranty card, and describes the software and technology in use today for demographic mapping. In the third part, he looks at two case studies—a marketing event sponsored by Molson that was held in the Canadian Arctic (contrasting the attendees and the indigenous inhabitants) and the use of cookies to collect personal information on the World Wide Web, which (along with other similar technologies) automate the process of information collection and cross-referencing. Elmer concludes by considering the politics of profiling, arguing that we must begin to question our everyday electronic routines.

New Directions in Human Information Behavior Amanda Spink, Charles Cole, 2006-01-31 New Directions in Human Information Behavior, co-edited by Drs. Amanda Spink and Charles Cole provides an understanding of the new directions, leading edge theories and models in human information behavior. Information behavior is conceptualized as complex human information related processes that are embedded within an individual's everyday social and life

processes. The book presents chapters by an interdisciplinary range of scholars who show new directions that often challenge the established views and paradigms of information behavior studies. Beginning with an evolutionary framework, the book examines information behaviors over various epochs of human existence from the Palaeolithic Era and within pre-literate societies, to contemporary behaviors by 21st century humans. Drawing upon social and psychological science theories the book presents a more integrated and holistic approach to the understanding of information behaviors that include multitasking and non-linear longitudinal processes, individuals' information ground, information practices and information sharing, digital behaviors and human information organizing behaviors. The final chapter of the book integrates these new approaches and presents an overview of the key trends, theories and models for further research. This book is directly relevant to information scientists, librarians, social and evolutionary psychologists. Undergraduate and graduate students, academics and information professionals interested in human information behavior will find this book of particular benefit.

New Media Campaigns and the Managed Citizen Philip N. Howard, 2006 A critical assessment of the role that information technologies have come to play in contemporary campaigns.

Unpacking Queer Politics Sheila Jeffreys, 2003-03-07 Unpacking Queer Politics argues that the strong lesbian feminist movement of the 1970s, which was able to articulate a philosophy and practice that distinguished lesbian politics from gay male politics, was submerged in the 1990s beneath a gay male agenda called queer politics. The new politics repudiated lesbian feminist ideas and celebrated 'manhood' as a goal for gay men. Practices which construct this 'manhood', such as sadomasochism, cutting and piercing, female-to-male transsexual surgery, and which are promoted in queer politics, need to be understood as forms of self-harm which result from the oppression of lesbians and gay men. The political agenda of queer politics is damaging to the interests of lesbians, women in general, and to marginalized and vulnerable constituencies of gay men. The book concludes by arguing that precisely the commitment to equality in relationships and sex that has been so important to lesbian feminists, and so excoriated in much of queer theory, should form the basis of a social transformation. In this way lesbians should be seen as the vanguard of social change.

Mapping Society Laura Vaughan, 2018-09-24 From a rare map of yellow fever in eighteenth-century New York, to Charles Booth's famous maps of poverty in nineteenth-century London, an Italian racial zoning map of early twentieth-century Asmara, to a map of wealth disparities in the banlieues of twenty-first-century Paris, Mapping Society traces the evolution of social cartography over the past two centuries. In this richly illustrated book, Laura Vaughan examines maps of ethnic or religious difference, poverty, and health inequalities, demonstrating how they not only serve as historical records of social enquiry, but also constitute inscriptions of social patterns that have been etched deeply on the surface of cities. The book covers themes such as the use of visual rhetoric to change public opinion, the evolution of sociology as an academic practice, changing attitudes to physical disorder, and the complexity of segregation as an urban phenomenon. While the focus is on historical maps, the narrative carries the discussion of the spatial dimensions of social cartography forward to the present day, showing how disciplines such as public health, crime science, and urban planning, chart spatial data in their current practice. Containing examples of space syntax analysis alongside full colour maps and photographs, this volume will appeal to all those interested in the long-term forces that shape how people live in cities.

Changing Things Johan Redström,Heather Wiltse,2020-01-09 Many of the things we now live with do not take a purely physical form. Objects such as smart phones, laptops and wearable fitness trackers are different from our things of the past. These new digital forms are networked, dynamic and contextually configured. They can be changeable and unpredictable, even inscrutable when it comes to understanding what they actually do and whom they really serve. In Changing Things, Johan Redstrom and Heather Wiltse address critical questions that have assumed a fresh urgency in the context of these rapidly-developing forms. Drawing on critical traditions from a range of disciplines that have been used to understand the nature of things, they develop a new vocabulary and a theoretical approach that allows us to account for and address the multi-faceted, dynamic, constantly evolving forms and functions of contemporary things. In doing so, the book prototypes a new design discourse around everyday things, and describes them as 'fluid assemblages'. Redstrom and Wiltse explore how a new theoretical framework could enable a richer understanding of things as fluid and networked, with a case study of the evolution of music players culminating in an in-depth discussion of Spotify. Other contemporary 'things' touched on in their analysis include smart phones and watches, as well as digital platforms and applications such as Google, Facebook and Twitter.

Public Integrity J. Patrick Dobel,2002-01-01 In this groundbreaking book, J. Patrick Dobel describes and analyzes the elements that constitute integrity in public office. Drawing on case studies, memoirs, interviews, and fiction (e.g., John Le Carré), Dobel addresses such issues as when to resign and when to stay in office. He examines the temptations of power, the relation between private and public life, and the role of honor and prudence in making personal decisions. He applies not only moral theory but also the insights of history, organizational theory, and psychology. Unlike most political ethics books, Public Integrity puts personal responsibility at the center of public morality, examining not just the responsibilities of office but also the role of personal moral commitments and promises. This timely book reminds us of the importance of public integrity as well as the demands and challenges that often threaten that integrity, especially in a liberal democracy such as the United States.

Dark Matter and the Dinosaurs Lisa Randall,2015-10-27 In this brilliant exploration of our cosmic environment, the renowned particle physicist and New York Times bestselling author of Warped Passages and Knocking on Heaven’s Door uses her research into dark matter to illuminate the startling connections between the furthest reaches of space and life here on Earth. Sixty-six million years ago, an object the size of a city descended from space to crash into Earth, creating a devastating cataclysm that killed off the dinosaurs, along with three-quarters of the other species on the planet. What was its origin? In Dark Matter and the Dinosaurs, Lisa Randall proposes it was a comet that was dislodged from its orbit as the Solar System passed through a disk of dark matter embedded in the Milky Way. In a sense, it might have been dark matter that killed the dinosaurs. Working through the background and consequences of this proposal, Randall shares with us the latest findings—established and speculative—regarding the nature and role of dark matter and the origin of the Universe, our galaxy, our Solar System, and life, along with the process by which scientists explore new concepts. In Dark Matter and the Dinosaurs, Randall tells a breathtaking story that weaves together the cosmos’ history and our own, illuminating the deep relationships that are critical to our world and the astonishing beauty inherent in the most familiar things.
