The Physics of Star Formation and Early Stellar Evolution Charles J. Lada, N.D. Kylafis, 2012-12-06
The origin of stars is one of the principle mysteries of nature. During the last two decades advances in technology have enabled more progress

to be made in the quest to understand stellar origins than at any other time in history. The study of star formation has developed into one of the most important branches of modern astrophysical research. A large body of observational data and a considerable literature now exist concerning this topic and a large community of international astronomers and physicists devote their efforts attempting to decipher the secrets of stellar birth. Yet, the young astronomer/physicist or more advanced researcher desiring to obtain a basic background in this area of research must sift through a very diverse and sometimes bewildering literature. A literature which includes research in many disciplines and sub disciplines of classical astrophysics from stellar structure to the interstellar medium and encompasses the entire range of the electromagnetic spectrum from radio to gamma rays. Often, the reward of a successful foray through the current literature is the realization that the results can be obsolete and outdated as soon as the ink is dry in the journal or the conference proceeding in which they are published.

Morning Star Rising Camellia Webb-Gannon, 2021-06-30 That Indonesia's ongoing occupation of West Papua continues to be largely ignored by world governments is one of the great moral and political failures of our time. West Papuans have struggled for more than fifty years to find a way through the long night of Indonesian colonization. However, united in their pursuit of

merdeka (freedom) in its many forms, what holds West Papuans together is greater than what divides them. Today, the Morning Star glimmers on the horizon, the supreme symbol of merdeka and a cherished sign of hope for the imminent arrival of peace and justice to West Papua. *Morning Star Rising: The Politics of Decolonization in West Papua* is an ethnographically framed account of the long, bitter fight for freedom that challenges the dominant international narrative that West Papuans' quest for political independence is fractured and futile. Camellia Webb-Gannon's extensive interviews with the decolonization movement's original architects and its more recent champions shed light on complex diasporic and intergenerational politics as well as social and cultural resurgence. In foregrounding West Papuans' perspectives, the author shows that it is the body politic's unflagging determination and hope, rather than military might or influential allies, that form the movement's most unifying and powerful force for independence. This book examines the many intertwining strands of decolonization in Melanesia. Differences in cultural performance and political diversity throughout the region are generating new, fruitful trajectories. Simultaneously, Black and Indigenous solidarity and a shared Melanesian identity have forged a transnational grassroots power-base from which the movement is gaining momentum. Relevant beyond its West Papua focus, this book is essential reading for those interested in Pacific studies, Native and Indigenous studies, development studies, activism, and decolonization.
