Continuous-Time Markov Decision Processes Alexey Piunovskiy, Yi
Zhang, 2020-11-09 This book offers a systematic and rigorous treatment of
continuous-time Markov decision processes, covering both theory and possible
applications to queueing systems, epidemiology, finance, and other fields.
Unlike most books on the subject, much attention is paid to problems with
functional constraints and the realizability of strategies. Three major
methods of investigations are presented, based on dynamic programming, linear
programming, and reduction to discrete-time problems. Although the main focus
is on models with total (discounted or undiscounted) cost criteria, models
with average cost criteria and with impulsive controls are also discussed in
depth. The book is self-contained. A separate chapter is devoted to Markov
pure jump processes and the appendices collect the requisite background on
real analysis and applied probability. All the statements in the main text
are proved in detail. Researchers and graduate students in applied

probability, operational research, statistics and engineering will find this monograph interesting, useful and valuable.
