Biological Effects of 224Ra W.A. Müller, H.G. Ebert, 2012-12-06 Under an association contract linking the Co-ission of the European Communities and the Gesellschaft für Strahlen und Umweltforschung mbH, a research programme on the pathogenesis of somatic radiation damage has been under way for a number of years. Experimental research on long-term radiation effects following the incorporation of bone-seeking radionuclides and an epidemiological study of the consequences for patients treated with 224Ra for therapeutical reasons have been among the main features of the work. The research carried out on tumor induction in the low dose range and for low dose rates is particularly important as regards assessing the radiation hazard to man. The second Symposium on the biological effects of 224Ra, held at Neuherberg, provided a welcome opportunity to take stock of what has been achieved so far and to discuss the own research efforts in an international setting. The discussions focussed on two topical aspects of radiation protection. One aspect was the long-term effects of high-LET ionizing radiations on man and the quantitative data involved in risk assessment at low doses. The epidemiological studies and experimental research carried out under the association contract should provide facts and figures for an objective assessment of the radiation hazards from incorporated radio nuclides, which is one of the fundamental and controversial problems of the nuclear energy debate.

**Glucocorticoid-induced Osteoporosis** Andrea Giustina, Alberto Angelini, Ernesto Canalis, 2002 Osteoporosis is one of the most clinically relevant disabling chronic disease encountered in clinical practice. A common cause of osteoporosis is glucocorticoid excess, as glucocorticoids may increase bone resorption, inhibit bone formation, have indirect actions on bone by decreasing intestinal calcium absorption and induce hypercalciuria. This book presents a comprehensive overview of the effects of glucocorticoids on bone metabolism and structure and on the diagnosis and treatment of glucocorticoid-induced osteoporosis. It aims at providing updated information on the pathogenesis, diagnosis and treatment of this often dramatic complication of glucocorticoid excess. Being one of the few publications completely devoted to glucocorticoid-induced osteoporosis it will heighten the awareness of specialists who prescribe glucocorticoids of the clinical relevance of this treatment complication. 'Glucocorticoid-Induced Osteoporosis' is addressed to clinical experts as well as to general practitioners who will both benefit from the comprehensive and integrative view of the management of patients exposed to glucocorticoids.
