ADHD: Non-Pharmacologic Interventions, An Issue of Child and Adolescent Psychiatric Clinics of North America, Stephen V. Faraone, 2014-10-28
This issue of Child and Adolescent Psychiatric Clinics focuses on non-pharmacologic interventions for ADHD in children and adolescents. Editors Stephen Faraone's and Kevin Antshel's goal with this publication is to help the clinician decipher the literature base in an attempt to make informed decisions and recommendations for the families that they treat in light of new non-pharmacologic interventions. To guide readers of this issue, Authors present information in a specific structure designed to describe the non-

pharmacologic intervention theoretically and practically, as well as provide clinically useful information regarding who is most likely to respond and which outcomes are most likely to be affected by treatment. Likewise, Authors include information on adverse effects / contraindications of the non-pharmacologic treatments and how treatments should be sequenced and/or integrated with other treatments. Science is translated into clinical practice that can be easily applied; this volume strikes a balance between reviewing the evidence base and providing clinically useful information. Among the topics are: Cognitive Behavioral Therapy for Adolescents with ADHD; Nutritional Supplements for the Treatment of ADHD; School-Based Interventions for Elementary School Students with ADHD; Middle and High School Based Interventions for Adolescents with ADHD; Healthy Body, Healthy Mind? The Effectiveness of Physical Activity to Treat ADHD in Children; Neurofeedback for Attention-Deficit/Hyperactivity Disorder: A Review of Current Evidence; Social Skills Training; Behavior Management for Preschool-Aged Children; Computer-based Cognitive Training for Attention-Deficit/Hyperactivity Disorder: A review of current evidence; Restriction and Elimination Diets in ADHD Treatment; Traditional Chinese Medicine in the Treatment of ADHD: A Review; Summer Treatment Programs for Youth with ADHD; Non-Pharmacologic Treatments for ADHD; Behavior Management for School Aged Children with ADHD; Family Therapy for Adolescents with Attention Deficit Hyperactivity Disorder; An Integrated Dietary/Nutritional Approach to ADHD; Toward an Evidence-Based Taxonomy of Non-Pharmacologic Treatments for Attention Deficit Hyperactivity Disorder.

The Cambridge Handbook of Child Language Edith L. Bavin, Letitia R. Naigles, 2015-11-26 The most authoritative resource for students and

researchers, The Cambridge Handbook of Child Language has been thoroughly updated and extended. Enhancements include new chapters on the acquisition of words, processing deficits in children with specific language impairments, and language in children with Williams syndrome, new authors for the bilingualism and autism chapters, a refocused discourse chapter on written narratives, and a new section on reading and reading disorders, cementing the handbook's position as the best study of the subject available. In a wide-ranging survey, language development is traced from prelinguistic infancy to adolescence in typical and atypical contexts; the material is intuitively grouped into six thematic sections, enabling readers to easily find specific in-depth information. With topics as varied as statistical learning, bilingualism, and the neurobiology of reading disorders, this multidisciplinary Handbook is an essential reference for students and researchers in linguistics, psychology, cognitive science, speech pathology, education and anthropology.

Axons and Brain Architecture Kathleen Rockland, 2015-11-21 Several excellent monographs exist which deal with axons. These, however, focus either on the cellular and molecular biology of axons proper or on network organization of connections, the latter with only an incidental or abstract reference to axons per se. Still relatively neglected, however, is the middle ground of terminations and trajectories of single axons in the mammalian central nervous system. This middle level of connectivity, between networks on the one hand and local, in vitro investigations on the other, is to some extent represented by retrograde tracer studies and labeled neurons, but there have so far been many fewer of the complementary anterograde studies, with total visualization of the axonal arborization. The present volume brings together

in one source an interrelated treatment of single axons from the perspective of microcircuitry and as substrates of larger scale organization (tractography). Especially for the former area - axons in microcircuitry - an abundance of published data exists, but these are typically in specialty journals that are not often accessed by the broader community. By highlighting and unifying the span from microcircuitry to tractography, the proposed volume serves as a convenient reference source and in addition inspires further interactions between what currently tend to be separate communities. The volume also redresses the imbalance between in vitro/local connectivity and long-distance connections. Focusing on mammalian systems, Part 1 of this book is devoted to anatomical investigations of connections at the single axon level, drawing on modern techniques and classical methods from the 1990s. A particular emphasis is on broad coverage of cortical and subcortical connections from different species, so that common patterns of divergence, convergence, and collateralization can be easily appreciated. Part 2 addresses mechanisms of axon guidance, as these seem particularly relevant to pathways and branching patterns. Part 3 covers axon dynamics and functional aspects; and Part 4 focuses on tractography, notably including comparisons between histological substrates and imaging. A novel innovative reference on the axon as a connectional unit, encompassing microcircuitry, axon guidance, and function. Featuring chapters from leading researchers in the field. Full-colour text that includes both an overview of axon function and the multiple underlying molecular mechanisms. The only volume to bring together the configuration of individual axons at a circuit level and to relate the histological geometry of axons and axon bundles to in vivo tractography imaging studies.

Intersecting Art and Technology in Practice Camille C Baker, Kate Sicchio, 2016-12-19 This book focuses on the artistic process, creativity and collaboration, and personal approaches to creation and ideation, in making digital and electronic technology-based art. Less interested in the outcome itself - the artefact, artwork or performance - contributors instead highlight the emotional, intellectual, intuitive, instinctive and step-by-step creation dimensions. They aim to shine a light on digital and electronic art practice, involving coding, electronic gadgetry and technology mixed with other forms of more established media, to uncover the practice-as-research processes required, as well as the collaborative aspects of art and technology practice.

Network Modeling, Simulation and Analysis in MATLAB Dac-Nhuong Le, Abhishek Kumar Pandey, Sairam Tadepalli, Pramod Singh Rathore, Jyotir Moy Chatterjee, 2019-08-06 The purpose of this book is first to study MATLAB programming concepts, then the basic concepts of modeling and simulation analysis, particularly focus on digital communication simulation. The book will cover the topics practically to describe network routing simulation using MATLAB tool. It will cover the dimensions' like Wireless network and WSN simulation using MATLAB, then depict the modeling and simulation of vehicles power network in detail along with considering different case studies. Key features of the book include: Discusses different basics and advanced methodology with their fundamental concepts of exploration and exploitation in NETWORK SIMULATION. Elaborates practice questions and simulations in MATLAB Student-friendly and Concise Useful for UG and PG level

research scholar Aiming at Practical approach for network simulation with more programs with step by step comments. Based on the Latest technologies, coverage of wireless simulation and WSN concepts and implementations

Near-Infrared Spectroscopy (NIRS) in Functional Research of Prefrontal Cortex Nobuo Masataka, Leonid Perlovsky, Kazuo Hiraki, 2016-08-16 This e-book includes the latest outcomes produced by a broad range of fNIRS research with activation of prefrontal cortex, from methodological one to clinical one, providing a forum for scientists planning functional studies of prefrontal brain activation. Reading this book, one will find the possibility that fNIRS could replace fMRI in the near future, and realize that even our aesthetic feeling is measurable. This will serve as a reference repository of knowledge from these fields as well as a conduit of information from leading researchers. In addition it offers an extensive cross-referencing system that will facilitate search and retrieval of information about NIRS measurements in activation studies. Researchers interested in fNIRS would benefit from an overview about its potential utilities for future research directions.
