**Babylonian Horoscopes** Francesca Rochberg, 1998 Interpretations of heavenly phenomena as signs of the future was a Mesopotamian tradition of great antiquity. The practice of Babylonian celestial divination, spanning a period from ca. 1800 B.C. to Hellenistic times, is known in the form of celestial omens portending the life of the king and the stability of the state. Emerging for the first time in the fifth century B.C., horoscopes reflect the application of the ideal and practice of celestial divination to the life of the individual. This is the first complete edition of the extant cuneiform horoscopes--with transcription and philological and astronomical commentary. It is the first study to offer a systematic description of the documents as a definable class of Babylonian astronomical/astrological texts.

**Existential Semiotics** Eero Tarasti, 2001-02-22 Existential semiotics involves an a priori state of signs and their fixation into objective entities. These essays define this new philosophical field.

**Arts and Humanities in Progress** Dario Martinelli, 2016-10-13 The book aims to introduce a research concept called Numanities, as one possible attempt to overcome the current scientific, social and institutional crisis of the humanities. Such crisis involves their impact on, and role within, society; their popularity among students and scholars; and their identity as producers and promoters of knowledge. The modern western world and its economic policies have been identified as the strongest cause of such a crisis. Creating the conditions for, but in fact encouraging it. However, a self-critical assessment of the situation is called for. Our primary fault as humanists was that of stubbornly thinking that the world’s changes could never really affect us, as – we felt – our identity was sacred. In the light of these approaches, the main strengths of humanities have been identified in the ability to: promote critical thinking and analytical reasoning; provide knowledge and understanding of democracy and social justice; develop leadership, cultural and ethical values. The main problems of humanities are the lack economic relevance; the socio-institutional perception of them as “impractical” and unemployable; the fact that they do not match with technological development. Finally, the resulting crisis consists mainly in the absence (or radical reduction) of funding from institutions; a decrease in student numbers a decrease in interest; a loss of centrality in society. A Numanities (New Humanities) project should consider all these aspects, with self-critical assessment on the first line. The goal is to unify the various fields, approaches and also potentials of the humanities in the context, dynamics and problems of current societies, and in an attempt to overcome the above-described crisis. Numanities are introduced not as a theoretical paradigm, but in terms of an “umbrella-concept” that has no specific scientific content in it: that particularly means that the many existing new fields and research trends that are addressing the same problems (post-humanism, transhumanism, transformational humanities, etc.) are not competitors of Numanities, but rather possible ways to them. Therefore, more than a theoretical program, Numanities intend to pursue a mission, and that is summarized in a seven-point manifesto. In the light of these premises and reflections, the book then proceeds to identify the areas of inquiry that Numanities, in their functions and comprehensive approach, seek to cover. The following list should also be understood as a statement of purposes for this entire book series. These, in other words, will be the topics/areas we intend to represent. Once elaborated on the foundations of Numanities, the book features a second part that presents two case studies based on two relatively recent (and now updated) investigations that the author has performed in the fields of musical and animal studies respectively. The two cases (and relative areas of inquiry) were selected because they were considered particularly relevant within the discussion of Numanities, and in two different ways. In the first case-study the author discussed the most typical result (or perhaps cause?) of the technophobic attitude that was addressed in the first part of the

book: the issue of “authenticity”, as applied, in the author's particular study, to popular music. In the second case-study, he analyzes two different forms of comparative analysis between human and non-human cognition: like in the former case, this study, too, is aimed at a critical commentary on (what the author considers) redundant biases in current humanistic research – anthropocentrism and speciesism.

**The Archaeology of Qumran and the Dead Sea Scrolls** Jodi Magness, 2002 Magness (early Judaism, U. of North Carolina, Chapel Hill), who has extensive archaeological experience in the area, has written a popular account of the archaeology, meaning, and controversies surrounding the Dead Seas Scrolls and the archaeological site of Qumran where they were found. Without sacrificing content, Magness turns this story into a fascinating page-turner. Annotation copyrighted by Book News, Inc., Portland, OR

**Calendars and Years** John M. Steele, 2007-10-08 Dates form the backbone of written history. But where do these dates come from? Many different calendars were used in the ancient world. Some of these calendars were based upon observations or calculations of regular astronomical phenomena, such as the first sighting of the new moon crescent that defined the beginning of the month in many calendars, while others incorporated schematic simplifications of these phenomena, such as the 360-day year used in early Mesopotamian administrative practices in order to simplify accounting procedures. Historians frequently use handbooks and tables for converting dates in ancient calendars into the familiar BC/AD calendar that we use today. But very few historians understand how these tables have come about, or what assumptions have been made in their construction. The seven papers in this volume provide an answer to the question what do we know about the operation of calendars in the ancient world, and just as importantly how do we know it? Topics covered include the ancient and modern history of the Egyptian 365-day calendar, astronomical and administrative calendars in ancient Mesopotamia, and the development of astronomical calendars in ancient Greece. This book will be of interest to ancient historians, historians of science, astronomers who use early astronomical records, and anyone with an interest in calendars and their development.

**Astronomy, Weather, and Calendars in the Ancient World** Daryn Lehoux, 2012-07-19 The focus of this book is the interplay between ancient astronomy, meteorology, physics and calendrics. It looks at a set of popular instruments and texts (parapegmata) used in antiquity for astronomical weather prediction and the regulation of day-to-day life. Farmers, doctors, sailors and others needed to know when the heavens were conducive to various activities, and they developed a set of fairly sophisticated tools and texts for tracking temporal, astronomical and weather cycles. Sources are presented in full, with an accompanying translation. A comprehensive analysis explores questions such as: What methodologies were used in developing the science of astrometeorology? What kinds of instruments were employed and how did these change over time? How was the material collected and passed on? How did practices and theories differ in the different cultural contexts of Egypt, Mesopotamia, Greece and Rome?

*Unsayable Music* Paulo C. Chagas, 2014 Profound theoretical and philosophical approach to contemporary music Unsayable Music presents theoretical, critical and analytical reflections on key topics of contemporary music including acoustic, electroacoustic and digital music, and audiovisual and multimedia composition. Six essays by Paulo C. Chagas approaching music from different perspectives such as philosophy, sociology, cybernetics, musical semiotics, media, and critical studies. Chagas’s practical experience, both as a composer of contemporary music and sound director of the Electronic Music Studio of Cologne, nourishes his observations on the specific creativity that emerges with the use of the technical apparatus, the development of the electronic music studio, the different aesthetics of electroacoustic music, and the forms of audiovisual and multimedia composition. The title Unsayable Music is a reference to Wittgenstein, who suggested that sound is only the surface of music and that the musical work conceals something more profound that can hardly be described by philosophical models or scientific theories.

**Studies in the History of the Exact Sciences in Honour of David Pingree** Jan P. Hogendijk, Kim Plofker, Michio Yano, Charles Burnett, 2004-02-01 This collection of essays reflects the wide range of David Pingree's expertise in the scientific texts (above all, concerning astronomy and astrology) of Ancient Mesopotamia, Greece, India, Persia, and the medieval Arabic, Hebrew and Latin traditions. Both theoretical aspects and the practical applications of the exact sciences-in time keeping, prediction of the future, and the operation of magic-are dealt with. The book includes several critical editions and translations of hitherto unknown or understudied texts, and a particular emphasis is on the diffusion of scientific learning from one culture to another, and through time. Above all, the essays show the variety and sophistication of the exact sciences in non-Western societies in pre-modern times.

**The Dead Sea Scrolls Today, Rev. Ed** James VanderKam, 2010-02-22 This perennially bestselling book on the Dead Sea Scrolls by one of the fields most respected scholars has now been revised and updated to reflect scholarship and debates since the book was first published in 1994.

**Geminos's Introduction to the Phenomena** James Evans, J. Lennart Berggren, 2018-06-05 This is the first complete English translation of Geminos's Introduction to the Phenomena--one of the most important and interesting astronomical works of its type to have survived from Greek antiquity. Gracefully and charmingly written, Geminos's first-century BC textbook for beginning students of astronomy can now be read straight through with understanding and enjoyment by a wider audience than ever before. James Evans and Lennart Berggren's accurate and readable translation is accompanied by a thorough introduction and commentary that set Geminos's work in its historical, scientific, and philosophical context. This book is generously illustrated with diagrams from medieval manuscripts of Geminos's text, as well as drawings and photographs of ancient astronomical instruments. It will be of great interest to students of the history of science, to classicists, and to professional and amateur astronomers who seek to learn more about the origins of their science. Geminos provides a clear view of Greek astronomy in the period between Hipparchos and Ptolemy, treating such subjects as the zodiac, the constellations, the theory of the celestial sphere, lunar cycles, and eclipses. Most significantly, Geminos gives us the earliest detailed discussion of Babylonian astronomy by a Greek writer, thus offering valuable insight into the cross-cultural transmission of astronomical knowledge in antiquity.

**The Avestan Hymn to Mithra**, 2007-12-03 The Avestan Hymn to Mithra, written in the fifth century BC, is the one extensive, ancient literary record of the attributes, companions and cult of the Iranian god whose worship spread, five or six centuries later, as far as Britain. Dr Gershevitch here reproduces Geldner's text and critical apparatus of the Hymn, adding his own introduction, translation and commentary. The introduction offers an orientation on the main problems concerning Mithra: how the god came to be included in the Zoroastrian religious system, his relation to Zarathustra's god Ahura Mazda, his functions, his development from the stage at which the Indian Mitra is found in the Rig Veda, and the extent to which the Western Mithras has preserved the characteristics of the Avestan Mithra. The text is faced by the English translation, and is followed by Dr Gershevitch's exhaustive commentary.
