*Global Environmental Change* Kirill Y. Kondratyev, Vladimir F. Krapivin, Gary W. Phillips, 2013-06-29 The growing number of published works dedicated to global environmental change leads to the realization that protection of the natural environment has become an urgent problem. The question of working out principles of co evolution of man and nature is being posed with ever-increasing persistence. Scientists in many countries are attempting to find ways of formulating laws governing human processes acting on the environment. Numerous national and international programs regarding biosphere and climate studies contribute to the quest for means of resolving the conflict between human society and nature. However, attempts to find efficient methods of regulating human activity on a global scale encounter principal difficulties. The major difficulty is the lack of an adequate knowledge base pertaining to climatic and biospheric processes as well as the largely incomplete state of the databases concerning global processes occurring in the atmosphere, in the ocean, and on land. Another difficulty is the inability of modern science to formulate the requirements which must be met by the global databases necessary for reliable evaluation of the state of the environment and forecasting its development for sufficiently long time intervals.

*Homeward* Bruce Western, 2018-05-04 In the era of mass incarceration, over 600,000 people are released from federal or state prison each year, with many returning to chaotic living environments

rife with violence. In these circumstances, how do former prisoners navigate reentering society? In Homeward, sociologist Bruce Western examines the tumultuous first year after release from prison. Drawing from in-depth interviews with over one hundred individuals, he describes the lives of the formerly incarcerated and demonstrates how poverty, racial inequality, and failures of social support trap many in a cycle of vulnerability despite their efforts to rejoin society. Western and his research team conducted comprehensive interviews with men and women released from the Massachusetts state prison system who returned to neighborhoods around Boston. Western finds that for most, leaving prison is associated with acute material hardship. In the first year after prison, most respondents could not afford their own housing and relied on family support and government programs, with half living in deep poverty. Many struggled with chronic pain, mental illnesses, or addiction—the most important predictor of recidivism. Most respondents were also unemployed. Some older white men found union jobs in the construction industry through their social networks, but many others, particularly those who were black or Latino, were unable to obtain full-time work due to few social connections to good jobs, discrimination, and lack of credentials. Violence was common in their lives, and often preceded their incarceration. In contrast to the stereotype of tough criminals preying upon helpless citizens, Western shows that many former prisoners were themselves subject to lifetimes of violence and abuse and encountered

more violence after leaving prison, blurring the line between victims and perpetrators. Western concludes that boosting the social integration of former prisoners is key to both ameliorating deep disadvantage and strengthening public safety. He advocates policies that increase assistance to those in their first year after prison, including guaranteed housing and health care, drug treatment, and transitional employment. By foregrounding the stories of people struggling against the odds to exit the criminal justice system, Homeward shows how overhauling the process of prisoner reentry and rethinking the foundations of justice policy could address the harms of mass incarceration.

**Impact of Climate Change on the Human Living Environment** Zengyu Hu, Yanfang Sang, Qiming Zhou, Zheng Duan, Climate change has been attracting extensive attention worldwide due to its significant and irreversible impacts on the human living environments including hydrometeorological disasters, freshwater availability, land use and land change, urbanization, food production, disease outbreaks, and many other aspects. It has caused huge socio-economic losses, and is the utmost obstacle to the sustainable development of human society. Therefore, addressing the above problems is an urgent and necessary issue to explore the impacts of climate change on different aspects of the human living environment, as an important basis to adopt effective adaptive measures and actions for mitigation of climate change impacts.

**Sustainable Development of Energy, Water and**

## **Environment Systems. N Vol. III** Naim Afgan,2007

Sustainability is a new, important discourse aimed at promoting a new strategy in the development of energy, water and environmental (EWE) systems ? the key components that affect the quality of life on our planet. It is becoming increasingly clear that the quest for sustainable development requires integrating economic, social, cultural, political and ecological factors. The behavior and properties of an EWE system arise not merely from the properties of its component elements, but also to a large degree also from the nature and intensity of their dynamic interlinkages. This volume helps clarify the complexity of these problems by providing a deeper understanding of the implications of the different aspects of sustainability. This work contains a collection of selected, peer-reviewed and state-of-the-art reflecting papers that were presented at the Third Dubrovnik Conference on Sustainable Development of Energy, Water and Environment Systems that was held in June 5?10, 2005 in Dubrovnik, Croatia.

Modern Environments and Human Health** Molly K.

Zuckerman,2014-03-11 Written in an engaging and jargon-free style by a team of international and interdisciplinary experts, Modern Environments and Human Health demonstrates by example how methods, theoretical approaches, and data from a wide range of disciplines can be used to resolve longstanding questions about the second epidemiological transition. The first book to address the subject

from a multi-regional, comparative, and interdisciplinary perspective, Modern Environments and Human Health is a valuable resource for students and academics in biological anthropology, economics, history, public health, demography, and epidemiology.

**Nonlinear Mathematics for Uncertainty and its Applications** Shoumei Li,Xia Wang,Yoshiaki Okazaki,Jun Kawabe,Toshiaki Murofushi,Li Guan,2011-07-21 This volume is a collection of papers presented at the international conference on Nonlinear Mathematics for Uncertainty and Its Applications (NLMUA2011), held at Beijing University of Technology during the week of September 7--9, 2011. The conference brought together leading researchers and practitioners involved with all aspects of nonlinear mathematics for uncertainty and its applications. Over the last fifty years there have been many attempts in extending the theory of classical probability and statistical models to the generalized one which can cope with problems of inference and decision making when the model-related information is scarce, vague, ambiguous, or incomplete. Such attempts include the study of nonadditive measures and their integrals, imprecise probabilities and random sets, and their applications in information sciences, economics, finance, insurance, engineering, and social sciences. The book presents topics including nonadditive measures and nonlinear integrals, Choquet, Sugeno and other types of integrals, possibility theory, Dempster-Shafer theory, random sets, fuzzy random sets and related statistics, set-valued and fuzzy

stochastic processes, imprecise probability theory and related statistical models, fuzzy mathematics, nonlinear functional analysis, information theory, mathematical finance and risk managements, decision making under various types of uncertainty, and others.

**Removal of Organic Pollution in Water**

**Environment** Joanna Karpińska, Urszula Kotowska, 2019-11-21 The development of civilization entails a growing demand for consumer goods. A side effect of the production and use of these materials is the production of solid waste and wastewater. Municipal and industrial wastewater usually contains a large amount of various organic compounds and is the main source of pollution of the aquatic environment.

Therefore, the search for effective methods of

wastewater and other polluted water treatment is an important element of caring for the natural environment. This book presents research on the determination and removal of environmentally hazardous organic compounds from aqueous samples. The articles included in this book describe the results of examinations, at the laboratory scale, of the efficiency of chemical as well as physical processes for the removal or degradation of selected model pollutants. Environmental studies, especially those concerning the determination of trace impurities, require effective isolation and concentration procedures. The methods used for this purpose should meet the requirements of green chemistry. The liquid phase microextraction procedures and use of electrochemical methods described in this book seem to be proper for environmental studies, as they are effective and environmentally friendly.

**China: Innovative Green Development** Angang Hu,2014-05-19 This book is particularly concerned

with China's path to green development and how it can be understood, exploring questions such as how the goal of Chinese-led green development can be achieved. The book provides systematic explanations of the theory of green development, exploring its background, its theoretical basis, the areas it covers, the stages it encompasses and the constraining and favorable factors involved. We see how humankind is at a period of transition from the traditional black industrial civilization to a modern green ecological civilization. The author gives a profound critique of the traditional Western model of development, provides a comprehensive analysis of the crisis and the opportunities presented by green development and depicts the grand goal of green modernization in a creative, bold, forward-looking manner. A three-step strategy to design and promote green development is proposed. Readers will discover why China must become an innovator, practitioner, and leader of green development, and how green planning is an important means to establish green development. The book explores how local governments can become green innovation practitioners, and how enterprises can become the main arena of green development. This book is a creative and innovative work that will appeal to scholars interested in the long-term development of humankind in general and China in particular. It also serves well as a green development textbook, presenting related scientific knowledge and important information for decision-making in a concise, easy-to-understand form.

GIS Environmental Modelling and Engineering Allan Brimicombe, 2003-08-29 Spatial dimensions need to be properly captured if modelling and engineering techniques are to be successfully applied in addressing environmental problems. The links between the geographical information systems (GIS) that capture this data, simulation modelling, and engineering offer tremendous possibilities for building versatile support systems for managing the environment. GIS,

Environmental Modelling and Engineering focuses on using GIS and external models to solve real environmental problems, promoting the critical thinking needed for the effective applications of these systems and their analytical outputs.

Divided into three major sections, this textbook first concentrates on defining GIS, identifying how data is structured, and explaining common functionality. The text examines GIS from a technological perspective, exploring the evolution of its scientific basis and its synergies with other technologies within a geocomputational paradigm. The next section explores modelling from a neutral scientific perspective in its role of simulating phenomena, as well as from a more specific perspective in its role within environmental science and engineering. The third and largest section looks at how GIS and simulation modelling are joined. It provides case studies and covers issues such as interoperability, data quality, model validity, space-time dynamics, and decision-support systems. This volume provides seniors and postgraduate students with a structured, coherent text that goes beyond introductory subject matter by enabling readers to think critically about the data acquisition process and the results they get from the technology.
