Report of a Workshop on Science, Technology, Engineering, and Mathematics (STEM) Workforce Needs for the U.S. Department of Defense and the U.S. Defense Industrial Base National Research Council,National Academy of Engineering,Committee on Science, Technology, Engineering, and Mathematics Workforce Needs for the U.S. Department of Defense and the U.S. Defense Industrial Base,2012-02-21 Report of a Workshop on Science, Technology, Engineering, and Mathematics (STEM) Workforce Needs for the U.S. Department of Defense and the U.S. Defense Industrial Base is the summary of a workshop held August 11, 2011, as part of an 18-month study of the issue. This book assesses the STEM capabilities that the Department of Defense (DOD) needs in order to meet its goals, objectives, and priorities; to assess whether the current DOD workforce and strategy will meet those needs; and to identify and evaluate options and recommend strategies that the department could use to help meet its future STEM needs.

Assuring the U.S. Department of Defense a Strong Science, Technology, Engineering, and Mathematics (STEM) Workforce National Research Council,National Academy of Engineering,Policy and Global Affairs,Board on Higher Education and Workforce,Division on Engineering and Physical Sciences,Committee on Science, Technology, Engineering, and Mathematics Workforce Needs for the U.S. Department of Defense and the U.S. Defense Industrial Base,2012-12-01 The ability of the nation's military

to prevail during future conflicts, and to fulfill its humanitarian and other missions, depends on continued advances in the nation's technology base. A workforce with robust Science, Technology, Engineering and Mathematics (STEM) capabilities is critical to sustaining U.S. preeminence. Today, however, the STEM activities of the Department of Defense (DOD) are a small and diminishing part of the nation's overall science and engineering enterprise. Assuring the U.S. Department of Defense a Strong Science, Technology, Engineering, and Mathematics (STEM) Workforce presents five principal recommendations for attracting, retaining, and managing highly qualified STEM talent within the department based on an examination of the current STEM workforce of DOD and the defense industrial base. As outlined in the report, DOD should focus its investments to ensure that STEM competencies in all potentially critical, emerging topical areas are maintained at least at a basic level within the department and its industrial and university bases.

Not So Fast Doug Hill, 2016 There's a well-known story about an older fish who swims by two younger fish and asks, How's the water? The younger fish are puzzled. What's water? they ask. Many of us today might ask a similar question: What's technology? Technology defines the world we live in, yet we're so immersed in it, so encompassed by it, that we mostly take it for granted. Seldom, if ever, do we stop to ask what technology is. Failing to ask that question, we fail to perceive all the ways it might be shaping us. Usually when we hear the word technology, we automatically think of digital devices and their myriad applications. As revolutionary as smartphones, online shopping, and social networks may seem, however, they fit into long-standing, deeply entrenched patterns of technological thought as well as practice. Generations of skeptics have questioned how well served we are by those patterns of thought and practice, even as generations of enthusiasts have promised that the latest innovations will deliver us, soon, to Paradise. We're not there yet, but the cyber utopians of Silicon Valley keep telling us it's right around the corner. What is technology, and how is it shaping us? In search of answers to those crucial questions, *Not So Fast* draws on the insights of dozens of scholars and artists who have thought deeply about the meanings of machines. The book explores such dynamics as technological drift, technological momentum, technological disequilibrium, and technological autonomy to help us understand the interconnected, interwoven, and interdependent phenomena of our technological world. In the course of that exploration, Doug Hill poses penetrating questions of his own, among them: Do we have as much control over our machines as we think? And who can we rely on to guide the technological forces that will determine the future of the

planet?

Rising Above the Gathering Storm, Revisited Institute of Medicine, National Academy of Engineering, National Academy of Sciences, 2005 "Rising Above the Gathering Storm" Committee, 2010-10-23 In the face of so many daunting near-term challenges, U.S. government and industry are letting the crucial strategic issues of U.S. competitiveness slip below the surface. Five years ago, the National Academies prepared *Rising Above the Gathering Storm*, a book that cautioned: Without a renewed effort to bolster the foundations of our competitiveness, we can expect to lose our privileged position. Since that time we find ourselves in a country where much has changed-and a great deal has not changed. So where does America stand relative to its position of five years ago when the *Gathering Storm* book was prepared? The unanimous view of the authors is that our nation's outlook has worsened. The present volume, *Rising Above the Gathering Storm, Revisited*, explores the tipping point America now faces. Addressing America's competitiveness challenge will require many years if not decades; however, the requisite federal funding of much of that effort is about to terminate. *Rising Above the Gathering Storm, Revisited* provides a snapshot of the work of the government and the private sector in the past five years, analyzing how the original recommendations have or have not been acted upon, what consequences this may have on future competitiveness, and priorities going forward. In addition, readers will find a series of thought- and discussion-provoking factoids-many of them alarming-about the state of science and innovation in America. *Rising Above the Gathering Storm, Revisited* is a wake-up call. To reverse the foreboding outlook will require a sustained commitment by both individual citizens and government

officials-at all levels. This book, together with the original Gathering Storm volume, provides the roadmap to meet that goal. While this book is essential for policy makers, anyone concerned with the future of innovation, competitiveness, and the standard of living in the United States will find this book an ideal tool for engaging their government representatives, peers, and community about this momentous issue.

This Day in American History, 4th ed. Ernie Gross,Roland H. Worth, Jr.,2012-05-21 This up-to-date fourth edition of the most important and interesting data--on a day by day basis--throughout American history includes more than 1,400 new entries with information on a wide variety of subjects--both the important matters (Supreme Court decisions, war events, scientific breakthroughs, etc.) and the lesser known but thought provoking incidents and phenomena (societal changes, unexpected events) that add richness and depth to American history.

The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education National Academies of Sciences, Engineering, and Medicine,Policy and Global Affairs,Board on Higher Education and Workforce,Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine,2018-07-21 In the United States, broad study in an array of different disciplines â€arts, humanities, science, mathematics, engineeringâ€ as well as an in-depth study within a special area of interest, have been defining characteristics of a higher education. But over time, in-depth study in a major discipline has come to dominate the curricula at many institutions. This evolution of the curriculum has been driven, in part, by increasing specialization in the academic disciplines. There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century.

Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise, grappling with ever more specialized and fundamental problems. Yet today, many leaders, scholars, parents, and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos. These silos represent what many see as an artificial separation of academic disciplines. This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time. *The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education* examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science, technology, engineering, mathematics, and medicine (STEMM) lead to improved educational and career outcomes for undergraduate and graduate students. It explores evidence regarding the value of integrating more STEMM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEMM education programs.
