A Piece of the Action Joe Nocera, 2013-01-15 Winner of the Helen Bernstein Award for Excellence in Journalism One of Business Week's "Ten Best Business Books of the Year" When it was published in 1994, A Piece of the Action was wildly acclaimed by Fortune, The Wall Street Journal, authors Michael Lewis and Brian Burroughs; it won the Helen Bernstein Prize and was a national bestseller. Joseph Nocera describes the historical process by which millions of middle class Americans went from being savers—people who kept their money in the bank, and spent it frugally—to being unrepentant borrowers and investors. A Piece of the Action is an important piece of financial and social history, and with a new introduction, Nocera's 2013 critique of the uses of the revolution is a powerful warning and admonition to understand what is at stake before we act, to look before we jump.

Mobile Payments, Consumer Policy, and the Law Nwanneka V. Ezechukwu, 2023-03-17 Mobile technology offers an innovative and cost-effective channel for delivering a range of financial services, including mobile payments. In some jurisdictions, mobile payments simply provide a convenient option for facilitating payment transactions. In other jurisdictions, mobile payments are viewed as potentially transformative because they present an opportunity to expand access to financial services. However, as with other innovations, mobile payments raise consumer protection concerns and require robust regulatory mechanisms to address such concerns. Against this backdrop, the book adopts a typology of consumer policy tools which can be used to address the identified consumer concerns. This typology guides the enquiry into the existing consumer protection frameworks applying to mobile payments in selected jurisdictions (Canada, Kenya, and the United Kingdom). The main objective of this endeavour is to identify best practices that national authorities seeking to leverage mobile payments and similar innovations can emulate. This book will be of interest to policymakers, regulators, industry stakeholders, students, and scholars interested in the regulation of innovative financial services, particularly from a consumer protection perspective.

What drives input subsidy policy reform? Resnick, Danielle, Mason, Nicole, M., 2016-11-24 When and why do suboptimal agricultural policies persist despite technical evidence highlighting alternatives? And what explains episodes of reform after prolonged periods of policy inertia? This paper addresses these questions by applying the Kaleidoscope Model for agricultural and food security policy change to the specific case of agricultural input policy in Zambia. Since 2002, the Farmer Input Support Program (formerly the Fertilizer Support Program) has been a cornerstone of Zambia's agricultural policy. Over the years, however, many researchers have highlighted weaknesses in the program and proposed other options. Based on semistructured interviews with key stakeholders and intensive process tracing using media, donor, parliamentary, and research reports, this paper examines how the program initially began in 2002 and during subsequent periods of reform in 2009 and 2015. Based on the findings here, periods of reform for input support programs are most likely when there is a confluence of multiple factors. These include the emergence of a window of opportunity in the form of either a focusing event (for example, a food crisis) or an institutional shift (for example, a new president or new ruling party) that coincides with broad stakeholder support for empirically grounded alternatives, available material resources, and sustained commitment from politically important policy makers.

Legal Principles for Combatting Cyberlaundering Daniel Adeoyé Leslie, 2014-07-18 This volume deals with the very novel issue of cyber laundering. The book investigates the problem of cyber laundering legally and sets out why it is of a grave legal concern locally and internationally. The book looks at the current state of laws and how they do not fully come to grips with the problem. As a growing practice in these modern times, and manifesting through technological innovations, cyber laundering is the birth child of money laundering and cybercrime. It concerns how the internet is used for 'washing' illicit proceeds of crime. In addition to exploring the meaning and ambits of the problem with concrete real-life examples, more importantly, a substantial part of the work innovates ways in which the dilemma can be curbed legally. This volume delves into a very grey area of law, daring a yet unthreaded territory and scouring undiscovered paths where money laundering, cybercrime, information technology and international law converge. In addition to unearthing such complexity, the hallmark of this book is in the innovative solutions and dynamic remedies it postulates.

Data Thieves in Action Thomas J. Holt, Olga Smirnova, Yi-Ting Chua, 2016-09-06 This book examines the practices of cybercriminals who steal and sell personal information acquired through various means, including mass data breaches, to engage in cybercrime and fraud. Using data from multiple English and Russian language web forums, the authors identify the range of products sold in these active on-line marketplaces and the prospective profits earned by these actors. The social organization of these markets is analysed using sociological theory to understand the sophistication of the markets. Social network analyses of the relational networks of participants are also utilised to examine their sophistication and structure. In doing so, this work will contribute to the development of cybercrime studies, and will appeal to both social and computer scientists alike with an interest in the human aspects of cybercrime.

The Evolution of Law against Payment Frauds Christopher Chen, 2022-12-09 This book examines the evolution of legal institutions in containing and tackling fraudulent activities plaguing payment systems ('payment fraud', e.g. forged cheques, wrongful payment instructions, etc.) in Asia, focusing on laws in Greater China and Singapore. In the past century, the payment system has invited much innovation, changing the modes of payments from exchanging cash and coins to the use of cards, wire transfers and other new types of payment instruments or services (e.g. bitcoins or QR code payments). As the nature of payment services is to move money from one place to another, it naturally attracts fraudsters. Even with advanced computer technology, payment fraud is still rampant in the market, causing billions of dollars in losses globally per annum. Through an examination of payment instruments and associated frauds over time, the book illustrates a shifting trend of legal solutions from criminal sanctions and civil compensation to a gradual focus on regulations of payment intermediaries. This trend reflects the complexity of payment systems and the challenge of protecting them. The book also identifies the underlying actors and institutional characteristics driving the evolution of legal institutions to deal with payment fraud and illustrates how the arrival of new technology may affect the market and thus the evolution of legal institutions. The book will help readers to better understand the interaction between technology, the market and law and help regulators, financial institutions, practitioners and end users, as well as about payment fraud and corresponding legal responses.
