John B. Longenecker,David Kritchevsky,Marc K. Drezner

Among the Celebrities Kasheba Hall,2012-05 Some people fantasize about being able to see their favorite celebrity, and wondering what kind of personality they have, and the thrill of being as close to them as possible. In this book I share my experience of the close contacts I had with stars like Michael Jackson, Stephanie Mills, Kate Jackson[of Charlie's Angels] Sly and the Family Stone and more.

Being Famous Jen Jones,2007-09 Explores the highs and lows of being a celebrity, including award shows, and dealing with the paparazzi, and tabloids.

The Guadalupean Fauna George Herbert Girty,1908

Where the Money Was Willie Sutton,Edward Linn,2004-03-23 The Broadway Books Library of Larceny Luc Sante, General Editor For more than fifty years, Willie Sutton devoted his boundless energy and undoubted genius exclusively to two activities at which he became better than any man in history: breaking in and breaking out. The targets in the first instance were banks and in the second, prisons. Unarguably America's most famous bank robber, Willie never injured a soul, but took on almost a hundred banks and departed three of America's most escape-proof penitentiaries. This is the stuff of myth—rascally and cautionary by turns—yet true in every searing, diverting, and brilliantly recalled detail.

The War Within Rajeev Ramchand,Joie Acosta,Rachel M. Burns,2011 The increase in suicides among military personnel has raised concern. This book reviews suicide epidemiology in the military, catalogs military suicide-prevention activities, and recommends relevant best practices.

Crane Robert Crane,Christopher Fryer,2015-03-06 Understanding of the respiratory control system has been greatly improved by technological and methodological advances. This volume integrates results from many perspectives, brings together diverse approaches to the investigations, and represents important additions to the field of neural control of breathing. Topics include membrane properties of respiratory neurons, in vitro studies of respiratory control, chemical neuroanatomy, central integration of respiratory afferents, modulation of respiratory pattern by peripheral afferents, respiratory chemoreception, development of respiratory control, behavioral control of breathing, and human ventilatory control. Forty-seven experts in the field report research and discuss novel issues facing future investigations in this collection of papers from an international conference of nearly two hundred leading scientists held in October 1990. This research is of vital importance to respiratory physiologists and those in neurosciences and neurobiology who work with integrative sensory and motor systems and is pertinent to both basic and clinical investigations. Respiratory Control is destined to be widely cited because of the strength of the contributors and the dearth of similar works.

HBO's Girls Betty Kaklamanidou,Margaret Tally,2014-03-25 Young women today have achieved as much as, and in many cases far exceeded, males in both educational and occupational terms. While this presents many opportunities, it also creates confusion in terms of re-negotiating traditional gender roles. The fictional representation of young women in recent film and television shows demonstrates how these tensions, created by the specific sociopolitical climate of the post-recession era, are being worked out. One specific television show focused on intelligent young women caught up in these contradictions is *Girls*. The show explores the lives of four female friends living in Brooklyn, two years after their college graduation, as they try to support themselves with low-paying jobs, and deal with various struggles around relationships, careers, and friendships. The HBO half-hour sitcom, created, written by and starring Lena Dunham, premiered on April 15th 2012 after receiving a flood of initial buzz and criticism, both positive and negative. This collection is the first to discuss the cultural, political and social implications of this innovative series. The contributors examine *Girls* through a variety of lenses: sexual, racial, gender, relationships between

the male and female characters, as well as friendships between the young women. This variety of perspectives explains why *Girls* has had the profound cultural impact it has made, in the short time it has been on the air.

A Commentary on Apollonius Rhodius *Argonautica* III, 1-471 Malcolm

Campbell, 2018-07-17 This is a commentary on the third book of Apollonius' *Argonautica*, one of the most influential and admired products of the Hellenistic era. The author sets out to deal comprehensively with all important aspects of the work; in particular, proper attention is paid for the first time to the poet's constant manipulation of the two Homeric epics; many thorny problems of text and interpretation are examined afresh; and a wealth of hitherto unadduced illustrative material drawn from Greek and Roman poetry of various genres and periods is used to shed light on a number of issues. The volume closes with a series of detailed digressive indexes dealing with diction, models and imitations, language and style, metre, transmission, mythology, religion, geography, ethnography and aetiology.

Blood Cell Biochemistry Leslie J. Fairbairn, Nydia G. Testa, 2012-12-06 Since the first concepts of gene therapy were formulated, the hemopoietic system has been considered the most natural first target tissue for genetic manipulation. The reasons for this include the fact that a very large number of inherited disorders (including some of the most common disorders, such as the hemoglobinopathies) are disorders of the hemopoietic system, and the large amount of experience in hematopoietic transplantation biology. The consequence of this resulted in the first clinical trial of gene therapy in 1989, where two children suffering from severe combined immune deficiency (ADA-SCID) were transplanted with T-cells expressing adenosine deaminase (the defective enzyme in patients with this disorder). The partial success of this treatment was perhaps responsible for undue optimism among those proposing other gene therapy treatments within the hematopoietic system, and it has since become clear that there are a number of technical and biological difficulties to overcome before hematopoietic gene therapy becomes a mainstream therapeutic strategy. The chapters in this book evaluate the need for gene therapy in the hematopoietic system, discuss how efficient gene transfer and expression can be achieved in the target cells, highlight areas of difficulty to be addressed, and examine a number of potential applications of the gene therapy approach. The book begins with a chapter by Testa and colleagues, discussing the various sources of hematopoietic cells for both transplantation and gene therapy.

Crisis of the House Divided Harry V. Jaffa, 2012-09-21 This definitive analysis of the Lincoln-Douglas debates is "one of the most influential works of American history and political philosophy ever published (National Review). In *Crisis of the House Divided*, noted conservative scholar and historian Harry V. Jaffa illuminates the political principles that guided Abraham Lincoln from his reentry into politics in 1854 through his Senate campaign against Stephen Douglas in 1858. Through critical analysis of the Lincoln-Douglas debates, Jaffa demonstrates that Lincoln's political career was grounded in his commitment to constitutionalism, the rule of law, and abolition. A landmark work of American history, it "has shaped the thought of a generation of Abraham Lincoln and Civil War scholars. To mark the fiftieth anniversary of the original publication, Jaffa has provided a new introduction (Civil War History). A searching and provocative analysis of the issues confronted and the ideas expounded in the great debates...A book which displays such learning and insight that it cannot fail to excite the admiration even of scholars who disagree with its major arguments and conclusions.—D. E. Fehrenbacher, *American Historical Review*

Nutrition and Biotechnology in Heart Disease and Cancer John B. Longenecker, David Kritchevsky, Marc K. Drezner, 2012-06-14 There is a unique nutritional commonality developing in research relating to coronary heart disease and cancer. The primary aim of this conference was to provide a forum for the leading researchers, clinicians, educators and administrators in these two fields to present a program on heart disease and cancer which included a) the major historical milestones, b) the present areas of greatest interest in research and therapy, c) the latest

nutritional, molecular, and biotechnological advances, and d) a perspective on the most promising areas for future research and therapy. Scientists have long contended that research marches on the feet of methodology. Thus there are numerous examples of research fields opening secondary to methodological advances. Some examples are: 1) thin layer and gas-liquid chromatography which, along with high pressure liquid chromatography have broadened the line of advances in lipid research and 2) PCR and the resultant impact on molecular biological approaches to several fields of science. The organizers of this conference thought the time was propitious for bringing together knowledge on newer aspects of molecular biological research with current advances in the two major areas of degenerative disease--coronary heart disease and cancer. Our knowledge of these killer diseases has expanded greatly in the past few years and the advance has been catalyzed by use of an array of molecular biological techniques. Thanks to these, medical thinking in these areas is changing from considerations of treatment to strategies for prevention.

Betrayals And Treason Nachman Ben-Yehuda, 2018-03-08 In *Betrayals and Treason* Nachman Ben-Yehuda identifies the universal structure of betrayals as the violation of trust and loyalty and charts the different manifestations and constructions of these violations, all within numerous cases across time, place, and cultures. Betrayals do not just lie in the eyes of the beholder, completely relative. While the very idea of betrayals is a social construct, underlying it is a universal structure of violations of both trust and loyalty. Whenever this structure materializes, the label betrayal is invoked and applied.

Point Made Ross Guberman, 2014-03-06 With *Point Made*, legal writing expert, Ross Guberman, throws a life preserver to attorneys, who are under more pressure than ever to produce compelling prose. What is the strongest opening for a motion or brief? How to draft winning headings? How to tell a persuasive story when the record is dry and dense? The answers are more science than art, says Guberman, who has analyzed stellar arguments by distinguished attorneys to develop step-by-step instructions for achieving the results you want. The author takes an empirical approach, drawing heavily on the writings of the nation's 50 most influential lawyers, including Barack Obama, John Roberts, Elena Kagan, Ted Olson, and David Boies. Their strategies, demystified and broken down into specific, learnable techniques, become a detailed writing guide full of practical models. In *FCC v. Fox*, for example, Kathleen Sullivan conjures the potentially dangerous, unintended consequences of finding for the other side (the Why Should I Care? technique). Arguing against allowing the FCC to continue fining broadcasters that let the F-word slip out, she highlights the chilling effect these fines have on America's radio and TV stations, discouraging live programming altogether, with attendant loss to valuable and vibrant programming that has long been part of American culture. Each chapter of *Point Made* focuses on a typically tough challenge, providing a strategic roadmap and practical tips along with annotated examples of how prominent attorneys have resolved that challenge in varied trial and appellate briefs. Short examples and explanations with engaging titles--*Brass Tacks*, *Talk to Yourself*, *Russian Doll*--deliver weighty materials with a light tone, making the guidelines easy to remember and apply. In addition to all-new examples from the original 50 advocates, this Second Edition introduces eight new superstar lawyers from Solicitor General Don Verrilli, Deanne Maynard, Larry Robbins, and Lisa Blatt to Joshua Rosencranz, Texas Senator Ted Cruz, Judy Clarke, and Sri Srinivasan, now a D.C. Circuit Judge. Ross Guberman also provides provocative new examples from the Affordable Care Act wars, the same-sex marriage fight, and many other recent high-profile cases. Considerably more commentary on the examples is included, along with dozens of style and grammar tips interspersed throughout. Also, for those who

seek to improve their advocacy skills and for those who simply need a step-by-step guide to making a good brief better, the book concludes with an all-new set of 50 writing challenges corresponding to the 50 techniques.

They Came to Play Christopher Byrne, 2016-02-01

Opinion Writing Ruggero J. Aldisert, 2009 This book is based on real life experiences where the possibility of the living being able to communicate with the deceased is investigated. The belief in reincarnation and life after death raises a tantalising question: Can the living communicate with the dead? Most churchmen and scientists are sceptical, but many people, including churchmen and scientists, believe such a thing is possible. The belief in the immortal soul is a dogma of Christianity (resurrection), Hinduism (reincarnation or samsara), Islam (Day of Judgement), Judaism (sheol), and the Shona (NyikaDzimu). Moreover, man has been familiar with the concept of life after death since time immemorial. Immortality has been rejected by those who feel its only basis is wishful thinking that when the body dies, the personality dies with it because it is part of the physical body. Believers can cite the resurrection of Jesus, and maintain that since life on earth is not completely fulfilled an afterlife is necessary for completion. Another argument in favour of an afterlife is that since matter and energy may be transformed but not destroyed, neither can personality, which exists just as do the elements in nature, be destroyed. In many of the ancient societies, including Egypt and Greece, dreaming was considered a supernatural communication or a means of divine intervention, whose message could be unravelled by those with certain powers. In modern times, various schools of psychology have offered theories about the meaning of dreams. In *Communication with the Deceased* is meant to serve only as a basis for reflection in order for the reader to examine all the clues and then derive further meaning from specific circumstances of his/her own dreams. To be able to interpret a dream, one does not need to have an academic degree in psychology. What is important is to use one's instinct and common sense. Try to develop your own personal insights into what the common symbols in your dreams mean. When it comes to dream symbols, there are no equivocally universal rules or meanings. Dreams dictionaries help by providing hints at the meaning of symbols that appear in one's dreams. This book is of value to those studying psychology and those participating

An Introduction to Relativity Jayant V. Narlikar, 2010-01-28 General relativity is now an essential part of undergraduate and graduate courses in physics, astrophysics and applied mathematics. After describing the basic theory, it moves on to describe important applications to astrophysics, black hole physics, and cosmology. Several worked examples, and numerous figures and images, help students appreciate the underlying concepts. There are also 180 exercises which test and develop students' understanding of the subject. The textbook presents all the necessary information and discussion for an elementary approach to relativity.
