Green Networking and Communications Shafiullah Khan,Jaime Lloret Mauri,2013-10-29 Although the information and communication technology (ICT) industry accounted for only 2 percent of global greenhouse gas emissions in 2007, the explosive increase in data traffic brought about by a rapidly growing user base of more than a billion wireless subscribers is expected to nearly double that number by 2020. It is clear that now is the ti

Green Communication in 4G Wireless Systems Shahid Mumtaz,Jonathan Rodriguez,2013-03-15 Green communication has emerged as one of the most important research topics for radio systems. This leads us to develop an energy-efficient mechanism which adjusts transmission power according to the traffic load and reduces the energy per bit usage. For the vision of Europe 2020 as a smart, sustainable and inclusive economy to become reality, the EU have set forth the 20:20:20 targets by which greenhouse gas emissions and energy reduction of primary use should be reduced by 20% while 20% of energy consumption should come from renewable resources.

Reclaiming Information and Communication Technologies for Development Tim Unwin,2017-05-18 The development of new Information and Communication Technologies (ICTs) has transformed the world over the last two decades. These technologies are often seen as being inherently 'good', with the ability to make the world better, and in particular to reduce poverty. However, their darker side is frequently ignored in such accounts. ICTs undoubtedly have the potential to reduce poverty, for example by enhancing education, health delivery, rural develop and entrepreneurship across Africa, Asia and Latin America. However, all too often, projects designed to do so fail to go to scale, and are unsustainable when donor funding ceases. Indeed, ICTs have actually dramatically increased inequality across the world. The central purpose of this book is to account for why this is so, and it does so primarily by laying bare the interests that have underlain the dramatic expansion of ICTs in recent years. Unless these are fully understood, it will not be possible to reclaim the use of these technologies to empower the world's poorest and most marginalised.

Highlight on Game Theory Jocelyn Fiorina ,2012-06-01 This volume gathers the lecture notes of the Second International Summer School on Cognitive Wireless Communications "Highlight on Game Theory", held in Paris, France, on July 10-13, 2012. The school was initiated by the European ACTION IC0902 funded by COST (European Cooperation in Science and Technology, www.cost.eu) in the domain of InformationTechnologies(ICT) and organized by Supélec laboratories, research groups and Game Theory, which has been applied at the beginning in economics and related domains, is gaining much interest today as a powerful tool to analyze and design communication networks. More specifically, it is particularly suited to the context of cognitive radio, where complex cognitive radio terminals could generate an overall chaotic behavior of the whole network without the appropriate analysis that can be brought by Game Theory. The objectives of this 4-days Summer School were to give to the participants a solid knowledge of the theoretic foundations of game theory, and to provide a deep insight to applications with specific case studies in the context of wireless networks and cognitive radio. The book is arranged following the training school program over the four days, presenting for each class a short abstract followed by the handouts presented by the lecturers.

Next Generation Wireless Terahertz Communication Networks Saim Ghafoor,Mubashir Husain Rehmani,Alan Davy,2021-08-10 The rapid growth of the data traffic demands new ways to achieve high-speed wireless links.
