The New Technology Elite Vinnie Mirchandani,2012-02-28

How-to guidance for optimizing incumbent technologies to deliver a better product and gain competitive advantage Their zip codes are far from Silicon Valley. Their SIC codes show retail,

automobile or banking. But industry after industry is waking up to the opportunity of smart products and services for their increasingly tech-savvy customers. Traditionally technology buyers, they are learning to embed technology in their products and become technology vendors. In turn, if you analyze Apple, Google, Amazon, Facebook, Twitter and eBay, you marvel at their data centers, retail stores, application ecosystems, global supply chains, design shops. They are considered consumer tech but have better technology at larger scale than most enterprises. The old delineation of technology buyer and vendor is obsolete. There is a new definition for the technology elite - and you find them across industries and geographies. The 17 case studies and 4 guest columns spread through The New Technology Elite bring out the elite attributes in detail. Every organization will increasingly be benchmarked against these elite - and soon will be competing against them. Contrasts the productivity that Apple, Google and others have demonstrated in the last decade to that of the average enterprise technology group Reveals how to leverage what companies have learned from Google, Apple, Amazon.com, and Facebook to your company's advantage Designed for business practitioners, CEOs, CFOs, CIOs, technology vendors, venture capitalists, IT consultants, marketing executives, and policy makers Other titles by Vinnie Mirchandani: The New Polymath: Profiles in Compound-Technology Innovations If you're looking to encourage technology innovation, look no further. The New Technology Elite provides the building blocks your company needs to become innovative through incumbent technologies.

Danger Zone: The Coming Conflict with China Michael Beckley, Hal Brands, 2022-08-16 A provocative and urgent analysis of the U.S.-China rivalry. It has become conventional wisdom that America and China are running a "superpower marathon" that may last a century. Yet Hal Brands and Michael Beckley pose a counterintuitive question: What if the sharpest phase of that competition is more like a decade-long sprint? The Sino-American

contest is driven by clashing geopolitical interests and a stark ideological dispute over whether authoritarianism or democracy will dominate the 21st century. But both history and China's current trajectory suggest that this rivalry will reach its moment of maximum danger in the 2020s. China is at a perilous moment: strong enough to violently challenge the existing order, yet losing confidence that time is on its side. Numerous examples from antiquity to the present show that rising powers become most aggressive when their fortunes fade, their difficulties multiply, and they realize they must achieve their ambitions now or miss the chance to do so forever. China has already started down this path. Witness its aggression toward Taiwan, its record-breaking military buildup, and its efforts to dominate the critical technologies that will shape the world's future. Over the long run, the Chinese challenge will most likely prove more manageable than many pessimists currently believe—but during the 2020s, the pace of Sino-American conflict will accelerate, and the prospect of war will be frighteningly real. America, Brands and Beckley argue, will still need a sustainable approach to winning a protracted global competition. But first, it needs a near-term strategy for navigating the danger zone ahead.
