3D Solar System, 2002 - a 24-page softcover book (11 8 1/2)- a pair of 3D glasses- 12 3D images of the sun, moon, 9 planets, and solar system

The Planets DK, 2014-09-01 See the Solar System like never before The Planets is an awe-inspiring and informative journey through the Solar System, with all-new 3D globes and models built using the latest data gathered by NASA and the European Space Agency that can be viewed from any angle and layer by layer. You can even move in for a closer look with 3D terrain models that take you on a trip to the surfaces of the rocky planets. As well as covering the Sun, the planets, hundreds of moons and thousands of asteroids and comets, The Planets includes all the major Solar System missions, right up to the latest Mars rovers. Timelines explore our relationship with each planet and infographics present fascinating Solar System facts and planet facts. The Planets is ideal for anyone interested in space exploration and all armchair astronauts or astronomers.

The Pop-Up, Pull-out Space Book, 2024-04-30 Explore the Solar System with this exciting and immersive pop-up space book for kids. Pay a visit to the planets, stop off at the Moon, and gaze at the stars. The Pop-up, Pull-out Space Book is a must have for curious children. Featuring a spectacular 3D pop-up Solar System, exciting pull-out pages, and fun quizzes and facts, this book is the perfect introduction to space and the Solar System. Starting with a quick tour of our place in space, this fantastic book acts as a tour guide, visiting each planet in turn. From our local star, the Sun, the adventure will lead to all eight planets of the Solar System before reaching Pluto, the rest of the Milky Way and beyond. Fun facts, a pull-out fact file, and an exciting quiz are provided for each planet you stop off at. Stunning space photography is interwoven with the most up-to-date information about planets in our Solar System and their exploration. Text is broken down into easy-to-digest chunks to create a fun, beautiful, and educational resource for children. The spectacular, out-of-this world pop-up and pull-out features create a magical reading experience. This revised edition features a stunning new jacket, a fresh new look for the spreads, and the very latest information about space discoveries and missions.

Solar System 3D Pop-Up Explorer Ian Graham, 2008 Join an interactive tour of the Solar System, starting at the Sun and travelling out past the inner planets, the Earth and Moon, the Asteroid Belt, the gas giants and beyond. As you journey through space, discover the secrets of the cosmos, from the giant volcanoes of Mars and Venus to the raging storm clouds of Jupiter and the icy rings of Saturn.

Proceedings of the 20th Congress of the International Ergonomics Association (IEA 2018) Sebastiano Bagnara, Riccardo Tartaglia, Sara Albolino, Thomas Alexander, Yushi Fujita, 2018-08-04 This book presents the proceedings of the 20th Congress of the International Ergonomics Association (IEA 2018), held on August 26-30, 2018, in Florence, Italy. By highlighting the latest theories and models, as well as cutting-edge technologies and applications, and by combining findings from a range of disciplines including engineering, design, robotics, healthcare, management, computer science, human biology and behavioral science, it provides researchers and practitioners alike with a comprehensive, timely guide on human factors and ergonomics. It also offers an excellent source of innovative ideas to stimulate future discussions and developments aimed at applying knowledge and techniques to optimize system performance, while at the same time promoting the health, safety and wellbeing of individuals. The proceedings include papers from researchers and practitioners, scientists and physicians, institutional leaders, managers and policy makers that contribute to constructing the Human Factors and Ergonomics approach across a variety of methodologies, domains and productive sectors. This volume includes papers addressing the following topics: Auditory and Vocal Ergonomics, Visual Ergonomics, Psychophysiology, and Ergonomics in Advanced Imaging.

3D Game Programming for Kids Chris Strom, 2013-10-16 Printed in full color. You know what's even better than playing games? Creating your own. Even if you're an absolute beginner, this

book will teach you how to make your own online games with interactive examples. You'll learn programming using nothing more than a browser, and see cool, 3D results as you type. You'll learn real-world programming skills in a real programming language: JavaScript, the language of the web. You'll be amazed at what you can do as you build interactive worlds and fun games. You'll jump right in and write games and simulations while learning programming fundamentals. You'll use the ICE Code Editor, which was created especially for this book to make it easy for you to get started with JavaScript programming. With the ICE Editor, you'll see the results of your work right away. Want a red donut? You can make hundreds of them, spinning around like crazy right next to the code you just typed. You'll do hands-on coding in every chapter. You'll start by building simple animated shapes, then make your own player--who can do cartwheels! You'll learn how to build your own games from start to finish, including a monster eating fruit, a cave puzzle, and rafting on a river. You'll animate simple shapes to create a model of the solar system, and make your own website so that you can show off your games with your friends. If you just want to make games, jump to the lessons focusing on projects. To understand some of the theory better or if you need some help with functions, turn to the chapters that explain the programming concepts. We'll walk you carefully through all the math needed to bring games to life. Best of all, you get to create awesome games and say, I made this!

Optical 3D-Spectroscopy for Astronomy Roland Bacon,Guy Monnet,2017-03-01 Over the last 50 years, a variety of techniques have been developed to add a third dimension to regular imaging, with an extended spectrum associated to every imaging pixel. Dubbed 3D spectroscopy from its data format, it is now widely used in the astrophysical domain, but also inter alia for atmospheric sciences and remote sensing purposes. This is the first book to comprehensively tackle these new capabilities. It starts with the fundamentals of spectroscopic instruments, in particular their potentials and limits. It then reviews the various known 3D techniques, with particular emphasis on pinpointing their different 'ecological' niches. Putative users are finally led through the whole observing process, from observation planning to the extensive and crucial phase of data reduction. This book overall goal is to give the non-specialist enough hands-on knowledge to learn fast how to properly use and produce meaningful data when using such a 3D capability.

Robert B Mann,Raymond G Mclenaghan,1994-08-31 This volume contains up-to-date accounts of many of the latest developments in gravitation, cosmology and astrophysics, including papers on black hole radiation, empirical tests of gravitational theory, quantum gravity, classical and quantum cosmology, singularities, computational methods, and a number of other topics. The keynote speakers include S Carlip, M Haugan, A Linde, D Page, G Papini, K Schleich, P Szekeres, G Starkman and J York.

Welcome to the Universe in 3D Neil deGrasse Tyson,Michael A. Strauss,J. Richard Gott,Robert J. Vanderbei,2022-04-19 Presenting a rich array of stereoscopic color images, which can be viewed in 3D using a special stereo viewer that folds easily out of the cover of the book, this book

reveals your cosmic environment as you have never seen it before. Journey into the vast depths of the observable universe by visualising the most spectacular images in astronomy in stereoscopic 3D. Welcome to the Universe in 3D takes you on a grand tour of the observable universe, guiding you through the most spectacular sights in the cosmos in a breathtaking 3D. Astronomy is the story of how humankind's perception of the two-dimensional dome of the sky evolved into a far deeper comprehension of an expanding three-dimensional cosmos. This book invites you to take part in this story by exploring the universe in depth, as revealed by cutting-edge astronomical research and observations. You will journey from the Moon through the solar system, out to exoplanets, distant nebulae, and galaxy clusters, until you finally reach the cosmic microwave background radiation (or CMB), the most distant light we can observe. The distances to these celestial wonders range from 1.3 light-seconds to 13.8 billion light-years. Along the way, the authors explain the fascinating features of what you are seeing, including how the 3D images were made using the same technique that early astronomers devised to measure distances to objects in space. The dramatic 3D images in this one-of-a-kind book will astonish you, extending your vision out to the farthest reaches of the universe. You will never look up into the night sky the same way again.

Discover! Solar System Norma O'Toole, Cindy Barden, 1999-09-01 The activities in this book explain elementary concepts in the study of the solar system, including orbits, the sun, the moon and moon phases, planets, seasons, and day and night. General background information, suggested activities, questions for discussion, and answers are included. Encourage students to keep completed pages in a folder or notebook for further reference and review.

Imber, 2010-09-27 It is a great pleasure to share with you the Springer CCIS 111 proceedings of the Third World Summit on the Knowledge Society--WSKS 2010--that was organized by the International Scientific Council for the Knowledge Society, and supported by the Open Research Society, NGO, (<http://www.open-knowledge-society.org>) and the International Journal of the Knowledge Society Research, (<http://www.igi-global.com/ijksr>), and took place in Aquis Corfu Holiday Palace Hotel, on Corfu island, Greece, September 22-24, 2010. The Third World Summit on the Knowledge Society (WSKS 2010) was an international scientific event devoted to promoting the dialogue on the main aspects of the knowledge society towards a better world for all. The multidimensional economic and social crisis of the last couple years brings to the fore the need to discuss in depth new policies and strategies for a human-centric developmental process in the global context. This annual summit brings together key stakeholders of knowledge society development worldwide, from academia, industry, government, policy makers, and active citizens to look at the impact and prospects of information technology, and the knowledge-based era it is creating, on key facets of living, working, learning, innovating, and collaborating in today's hyper-complex world.
