Ultimate Speech Sounds Kate Beckett (Speech therapist), 2023-12 It can be challenging to guide parents towards helpful resources that can solidify the skills learnt in speech therapy sessions. This book provides easy to follow instructions and links to 3D animated video clips for the therapist to use with the parent to ensure perfect technique every time. The book considers each of the 24 English consonants and vowels sounds in detail with regards to anatomy, physiological production, and therapy materials to be used in practice. It is accompanied by online 3D animated video material featuring DARA, an avatar that sounds out each consonant or vowel, clearly showing how the shape of the mouth and positioning of the tongue forms each sound. Photocopyable and free downloadable material from Resourceable.com also make ideal resources for parents to use at home. This book offers a toolkit to support technique explanation to parents and children rather than an education for therapists. It is a practical clinic resource to help speech therapists teach speech sound formation along with suggested elicitation techniques. This is an essential component for newly qualified and student SLTs as well as those more seasoned in the field--

Difficult Heritage and Immersive Experiences Agiatis Benardou, Anna Maria Droumpouki, 2022-12-09 Difficult Heritage and Immersive Experiences examines the benefits involved in designing and employing immersive technologies to reconstruct difficult pasts at heritage sites around the world. Presenting interdisciplinary case studies of heritage sites and museums from across a range of different contexts, the volume analyzes the ways in which various types of immersive technologies can help visitors to contextualize and negotiate difficult or sensitive heritage and traumatic pasts. Demonstrating that some of the most creative applications of immersive experiences appear in and at museums and heritage sites, the book showcases how immersive technologies offer the possibility of confronting and disputing presumptions and prejudices, triggering responses, delivering new knowledge, initiating dialogue and challenging preexisting notions of collective identity. The book provides a conceptual, as well as a hands-on, approach to understanding the use of immersive technologies at sensitive sites around the globe. Difficult Heritage and Immersive Experiences is essential reading for researchers and students who are interested in, or engaged in the study of, cultural heritage, memory, history, politics, dark tourism, design and digital media or immersive technologies. The book will also be of interest to museum and heritage practitioners.

English Mechanic and Mirror of Science ,1884

Musical Instruments Lamberto Tronchin, 2021-02-19 The study of the acoustic and vibrational characteristics of musical instruments in terms of their mechanical behavior, sound emission, and characteristics started thousands of years ago, and among the physicists and mathematicians that addressed this matter, we should at least recognize Leonardo da Vinci, with his experimental water organ, and Ernst Chladni, who discovered nodal patterns on rigid surfaces such as soundboards. The growing awareness of our intangible cultural heritage and the need to better understand our roots in the field of music have contributed to increasing the efforts to extend our knowledge in this field, defining new physical parameters, extending the analysis to other musical instruments, and developing new methods to synthesize sound from musical instruments using a simple keyboard.
