The Peptidergic Neuron B. Krisch, 2012-12-06 Neuropeptides rank among the phylogenetically oldest interneuronal signal substances. In the concept of neuro-secretion they were identified as neurohormones by which - via the blood - the brain regulates peripheral functions. It is now evident that the neuropeptides act as neurotransmitters/-modulators, as (neuro-)hormones, and paracrine or autocrine signal substances in diverse parts of the body. This book reviews, in several comprehensive articles written by distinguished specialists, the state of the art in the field of neuropeptides and peptidergic neurons. Special topics concern molecular aspects of processing, release and degradation of neuropeptides, receptors and signal transduction, comparative and behavioural aspects, and immunoregulatory effects of neuropeptides and their involvement on pathology of the central nervous system.

The Chromosomal Imbalance Theory of Cancer David Rasnick,2016-04-19 Exploring the chromosomal imbalance (aneuploidy) theory of cancer, this volume describes how cancer is initiated and why progression takes years to decades. It clarifies why cancer cells often become drug resistant, provides objective, quantitative measures for detecting cancer and monitoring its progression, and suggests non-toxic strategies of cancer therapy and prevention. The book posits that the autocatalyzed progression of aneuploidy is carcinogenesis. The clarity and unifying simplicity of the theory of chromosomal imbalance has the potential to fundamentally alter the course of cancer research, prevention, diagnosis and treatment.
