Traceable Temperatures J. V. Nicholas,D. R. White,1982 Traceable Temperatures An Introduction to Temperature Measurement and Calibration J. V. Nicholas D. R. White New Zealand Institute for Industrial Research and Development Over one in five thermometers currently in use are out of calibration. This self-teaching text seeks to redress this situation by providing practical guidance on temperature measurement and calibration. Focusing upon recognised measurement procedures and international standards, the authors detail the operating and measurement principles for the four most common thermometers: platinum resistance, liquid-in-glass, thermocouples and radiation thermometers. Features include: The latest temperature information: including ITS-90 reference tables for thermocouples and platinum resistance thermometers. Detailed coverage of traceability: how to make traceable measurements and how to design, carry out and report calibrations. Identification of the main contributing uncertainties for a range of thermometers. Extensive advice on accuracy, with sections devoted to the recognition and treatment of errors. Technical information to complement the managerial guidelines of the ISO 9000 series QA systems. The systematic approach will assist those seeking accreditation along the lines of ISO Guide 25. Illustrative examples, detailed references and a full bibliography. Practising measurement engineers, scientists and technicians will find the authors' emphasis on quality concepts and modern instrument practice particularly valuable. Students on engineering courses and research workers will also find this comprehensive reference source appealing. Traceable Temperatures: An Introduction to Temperature Measurement and Calibration forms part of the Wiley Series in Measurement Science and Technology. Chief Editor: Peter Sydenham, Sensor Science and Engineering Group, University of South Australia. Advanced Temperature Measurement and Control ,2011

Principles and Methods of Temperature Measurement A. Bhatia,2014-10-17 Temperature is a principle parameter that needs to be monitored and controlled in most engineering applications such as heating, cooling, drying and storage. Temperature can be measured via a diverse array of sensors. All of them infer temperature by sensing some change in a physical characteristic be it a thermal expansion, thermoelectricity, electrical resistance or thermal radiation. There are four basic types of temperature measuring devices, each working on a different principle: 1. Mechanical (liquid-in-glass thermometers, bimetallic strips, bulb & capillary, pressure type etc.)2. Thermocouples3. Thermo-resistive (RTDs and thermistors)4. Radiative (infrared and optical pyrometers)Each of these will be discussed in this 2 hours learning module. The course is written in user friendly language and the theoretical equations are kept minimum. The basic aspects are discussed wherever deemed fit. This course is aimed at electrical, instrumentation & control engineers, energy auditors, O & M professionals, contractors, estimators, facility managers and general audience. This course includes a

multiple-choice quiz at the end, which is designed to enhance the understanding of the course materials.Learning ObjectiveUpon completing the course, you will:• Learn various types of temperature sensors;• Understand the principle of operation of thermocouples (Peltier effect, Thompson effect and Seebeck effect);• Describe the basic construction of a thermocouple including materials used;• Understand the three laws of thermocouples (law of intermediate metals, law of intermediate temperatures and law of additive voltages);• Describe the difference between grounded, ungrounded and exposed junctions;• Describe the basic principle and construction of RTD's and Thermistors;• Understand the difference between the two main types of thermistors i.e. positive; temperature coefficient (PTC) and negative temperature coefficient (NTC);• Explain how RTD resistance varies for increase and decrease of temperatures using bridge circuits;• Describe the basic principles of radiative temperature measurement including infrared and optical pyrometers.
