**Programming for Health and Wellbeing in Architecture** Keely Menezes, Pamela de Oliveira-Smith, A. Vernon Woodworth, 2021-11-10 Programming for Health and Wellbeing in Architecture presents a new approach to architectural programming that includes sustainability, neuroscience and human factors. This volume of contributions from noted architects and academics makes the case for rethinking the practices of programming and planning to incorporate evidence-based design, systems thinking and a deeper understanding of our evolutionary nature. These 18 original essays highlight how human and environmental health are closely related and should be incorporated as mutually reinforcing goals in every design project. Together, these chapters describe the framework for a new paradigm of building performance and design of the human experience. Programming—the stage at which research is conducted and goals established—provides an opportunity to examine potential impacts and to craft strategies for wellbeing in new buildings and renovations using the latest scientific methods. This book expands the scope of the programming process and provides essential guidance for sustainable practice and the advancement of wellbeing in the built environment for architecture and interiors students, practitioners, instructors and academics.

**From Human Attention to Computational Attention** Matei Mancas, Vincent P. Ferrera, Nicolas Riche, John G. Taylor, 2016-06-29 This both accessible and exhaustive book will help to improve modeling of attention and to inspire innovations in industry. It introduces the study of attention and focuses on attention modeling, addressing such themes as saliency models, signal

detection and different types of signals, as well as real-life applications. The book is truly multi-disciplinary, collating work from psychology, neuroscience, engineering and computer science, amongst other disciplines. What is attention? We all pay attention every single moment of our lives. Attention is how the brain selects and prioritizes information. The study of attention has become incredibly complex and divided: this timely volume assists the reader by drawing together work on the computational aspects of attention from across the disciplines. Those working in the field as engineers will benefit from this book's introduction to the psychological and biological approaches to attention, and neuroscientists can learn about engineering work on attention. The work features practical reviews and chapters that are quick and easy to read, as well as chapters which present deeper, more complex knowledge. Everyone whose work relates to human perception, to image, audio and video processing will find something of value in this book, from students to researchers and those in industry.

**Urban Experience and Design** Justin B. Hollander, Ann Sussman, 2020-10-15 Embracing a biological and evolutionary perspective to explain the human experience of place, *Urban Experience and Design* explores how cognitive science and biometric tools provide an evidence-based foundation for architecture and planning. Aiming to promote the creation of a healthier and happier public realm, this book describes how unconscious responses to stimuli, outside our conscious awareness, direct our experience of the built environment and govern human behavior in our surroundings. This collection contains 15 chapters, including contributions from researchers in the US, the UK, the Netherlands, France and Iran. Addressing topics such as the impact of eye-tracking

analysis and seeing beauty and empathy within buildings, Urban Experience and Design encourages us to reframe our understanding of design, including the narrative of how modern architecture and planning came to be in the first place. This volume invites students, academics and scholars to see how cognitive science and biometric findings give us remarkable 21st-century metrics for evaluating and improving designs, even before they are built.

**Reeds PBO Small Craft Almanac 2024** Perrin Towler,Mark Fishwick,2023-11-23 In a practical handy format the Reeds PBO Small Craft Almanac, published in association with Practical Boat Owner, covers all of the UK and Ireland, as well as the North Atlantic coastline from Denmark to the Gironde. The Reeds PBO Small Craft Almanac may be more compact and concise than the Reeds Nautical Almanac but it contains a wealth of indispensable navigational data specially tailored for small craft sailors, presented in an easy-to-find, quick-reference manner for on-board use. Streamlined to focus on tidal data (tide tables, tidal streams and tidal curves) and lights, buoys and waypoints, the Small Craft Almanac covers the whole of the UK and Ireland and the west coast of Europe from Denmark to the Gironde. Published in association with Practical Boat Owner magazine, this practical handy Almanac boasts many unique features for small craft sailors and represents excellent value for money for those who don't need the more comprehensive marina data, passage information and chartlets of the full Reeds Almanac. Meticulously researched, it includes a huge amount of information of value to small craft navigators: tide tables, tidal streams and tidal gates; secondary port differences; 2,500+ waypoints; radio data; light recognition; weather information; principal lights; IALA buoyage; international codes and flags; sun/moon rise/set times; emergency information. Also available: free supplements of up-to-date navigation changes from January to June at: [www.reedsnauticalalmanac.co.uk](http://www.reedsnauticalalmanac.co.uk)
