**Review and Evaluation of Alternative Chemical Disposal Technologies** National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Panel on Review and Evaluation of Alternative Chemical Disposal Technologies, 1996-11-15 In 1994 the National Research Council published Recommendations for the Disposal of Chemical Agents and Munitions, which assessed the status of various alternative destruction technologies in comparison to the Army's baseline incineration system. The volume's main finding was that no alternative technology was preferable to incineration but that work should continue on the neutralization technologies under Army consideration. In light of the fact that alternative technologies have evolved since the 1994 study, this new volume evaluates five Army-chosen alternatives to the baseline incineration system for the disposal of the bulk nerve and mustard agent stored in ton containers at Army sites located in Newport, Indiana, and Aberdeen, Maryland, respectively. The committee assessed each technology by conducting site visits to the locations of the technology proponent companies and by meeting with state regulators and citizens of the affected areas. This volume makes recommendations to the Army on which, if any, of the five technologies has reached a level of maturity appropriate for consideration for pilot-scale testing at the two affected sites.

*Twenty-First Century Quantum Mechanics: Hilbert Space to Quantum Computers* Guido Fano, S M Blinder, 2017-06-27 This book is designed to make accessible to nonspecialists the still evolving concepts of quantum mechanics and the terminology in which these are expressed. The opening chapters summarize elementary concepts of twentieth century quantum mechanics and describe the mathematical methods employed in the field, with clear explanation of, for example, Hilbert space, complex variables, complex vector spaces and Dirac notation, and the Heisenberg uncertainty principle. After detailed discussion of the Schrödinger equation, subsequent chapters focus on isotropic vectors, used to construct spinors, and on conceptual problems associated with measurement, superposition, and decoherence in quantum systems. Here, due attention is paid to Bell's inequality and the possible existence of hidden variables. Finally, progression toward quantum computation is examined in detail: if quantum computers can be made practicable, enormous enhancements in computing power, artificial intelligence, and secure communication will result. This book will be of interest to a wide readership seeking to understand modern quantum mechanics and its potential applications.

*Cardinal Invariants on Boolean Algebras* J. Donald Monk, 2014-02-11 This book is concerned with cardinal number valued functions defined for any Boolean algebra. Examples of such functions are independence, which assigns to each Boolean algebra the supremum of the cardinalities of its free subalgebras, and cellularity, which gives the supremum of cardinalities of sets of pairwise disjoint elements. Twenty-one such functions are studied in detail, and many more in passing. The questions considered are the behaviour of these functions under algebraic operations such as products, free products, ultraproducts, and their relationships to one another. Assuming familiarity with only the basics of Boolean algebras and set theory, through simple infinite combinatorics and forcing, the book reviews current knowledge about these functions, giving complete proofs for most facts. A special feature of the book is the attention given to open problems, of which 185 are formulated. Based on Cardinal Functions on Boolean Algebras (1990) and Cardinal Invariants on Boolean Algebras (1996) by the same author, the present work is much larger than either of these. It contains solutions to many of the open problems of the earlier volumes. Among the new topics are continuum cardinals on Boolean algebras, with a lengthy treatment of the reaping number. Diagrams at the end of the book summarize the relationships between the functions for many important classes of Boolean algebras, including interval algebras, tree algebras and superatomic algebras.

*An Introduction to Great Western Locomotive Development* Jim Champ, 2018-02-28 The first thought, when contemplating a new study of the Great Western Railway locomotive fleet, must surely be to ask what can there be left to say? But there is no single source which gives a general introduction to the Great Western locomotive fleet. There are monographs on individual classes, an excellent multi-volume detail study from the RCTS, and superb collections of photographs, but nothing that brings it all together. This work is intended to provide that general introduction. The volume begins with a series of short essays covering general trends in design development, whilst the main body of the volume covers individual classes. For each class there is a small table containing some principal dimensions and paragraphs of text, covering an introduction, renumbering, key changes in the development of the class and information on withdrawal. The volume concludes with appendices covering the development and types of standard boilers, the various numbering schemes used by the GWR, the arcane subject of locomotive diagrams and lot numbers, and a short reference on the many lines the GWR engulfed. The majority of illustrations are new profile drawings to a consistent format. Described as sketches, they are drawn to a consistent scale, but do not claim to be scale drawings. Much minor equipment has been omitted and the author has certainly not dared to include rivets! Although most are based around GWR weight diagrams, they are not simple traces of the original drawings. Detail has been added from other sources, components copied from different drawings and details have been checked against historical and modern photographs. One must also bear in mind that steam locomotives were not mass produced. Minor fittings frequently varied in position and changes were made over the locomotives' lifetimes. Nevertheless, this collection of drawings provides a uniquely consistent view of the GWR locomotive fleet.

**Heavy Elements and Related New Phenomena** Walter Greiner, Raj K Gupta, 1999-06-17 This book reviews recent developments in the field of superheavy elements and the related phenomena of fission, cluster radioactivity, and drip line physics. Both the experimental and theoretical aspects are dealt with in detail. For the production of new elements in the laboratory, the process of cold compound nucleus formation is found to be most favorable both theoretically and experimentally. However, experimentally, hot fusion of nuclei has also been used. Both the physical and chemical methods of synthesizing new elements are discussed. The theoretical approaches considered here are those of the quantum-mechanical fragmentation theory, the self-consistent Hartree–Fock theory, and the relativistic mean field theory. Fission, a process inverse to the fusion of two nuclei, is also observed to be most favourably a cold phenomenon. Other important results are bi-modal fission and high n-multiplicity fission, which leads to the hyperdeformed scission mode. Cluster radioactivity is discussed both as a heavy cluster emission process and as super-asymmetric fission. The theory as well as the present experimental status are reviewed. Physics at drip lines is interesting not only for their structural properties but also for their use in the fusion of two nuclei; both aspects are discussed. Contents: New Developments in the Study of Superheavy Elements: Discovery of the Heaviest Elements (G Münzenberg & S Hofmann) Chemical Properties of the Transactinide Elements (J V Kratz) Two-centre Shell Model in Cold Synthesis of Superheavy Elements (R K Gupta & W Greiner) New Developments in Fission Physics: Cold Fission (H-G Clerc) High Neutron Multiplicity and Cold Binary and Ternary Spontaneous Fission of  $^{252}\text{Cf}$  (A V Ramayya et al.) **De Bellis Renationis version 2.0** Phil Barker,2019-05-04 De Bellis Renationis is a set of wargames rules for Renaissance battles covering the period from 1494 AD to 1700 AD. DBR version 2.0 offers a combination of realism and excitement for this warfare using miniature figures in any scale from 2mm to 30mm. The creation of the experienced wargame designers Phil Barker and Richard Bodley Scott, DBR can be used to refight historical engagements or your own scenarios from small scale skirmishes to the largest battles of the period. With its command system using player initiative points, DBR emphasizes the player's generalship rather than their ability to manipulate a set of rules. It allows players to fight actions from the whole period and across the whole world, from Japan to Europe and the Americas and from the Italian Wars to the Nine Years' War. This edition combines the 2002 edition of the rules with all three of the books of Army Lists and includes everything the wargamer needs to refight these battles in one single convenient volume.

**The Way of Four** Deborah Lipp,2004 Earth, Air, Fire, and Water -- the four elements give us a way to describe the universe and everything in it, a structured approach to knowing the unknowable. The elements are also potent keys to heightened self-understanding and personal balance. Your elemental nature is revealed in the way you express yourself in relationships, the roles you play in life, even your sense of style. Insightful and fun to use, The Way of Four will show you how to create balance within your self, your home, and your workplace. It starts with a complete and concise history of the four elements, from the Celts, to ancient India and Greece, to modern Western occultism. This unique book also discusses the relationship between Jungian personality types, the court cards of the Tarot, and the four elements.

*REDUCE for Physicists* N MacDonald,1994-01-01 The use of computer algebra systems in science and engineering has grown rapidly as more people realize their potential to solve tedious and extensive mathematical problems. REDUCE for Physicists provides a comprehensive introduction to one of the most widely available and simple to use computer algebra systems, focusing primarily on the needs of physicists. As a means of performing symbolic computation, REDUCE reduces tedious manual algebraic calculations and the dangers of casual errors. Each chapter introduces some aspects of REDUCE and illustrates them with applications from various branches of physics including mechanics, dynamics, dimensional analysis, quantum mechanics, and plasma physics. Emphasizing hands-on work with REDUCE to tackle real physical problems, the book includes exercises to test understanding throughout. Students and researchers in the physical sciences and engineering using REDUCE for the first time will find this book an invaluable aid to learning.

**The Making of Tests for Index Numbers** Arthur Vogt,Janos Barta,2013-03-14 Arthur Vogt has devoted a great deal of his scientific efforts to both person and work of Irving Fisher. This book, written with János Barta, gives an excellent impression of Fisher's great contributions to the theory of the price index on the one hand. On the other hand, it continues Fisher's work on this subject along the lines which several authors drew with respect to price index theory since Fisher's death fifty years ago. This is a highly instructive book on both the history and theory of measurement in economics. It is rather a rich source of interesting properties of more or less well known indices and famous men, especially Irving Fisher, than a precise mathematical text on the axiomatic foundations of indices. (From the Foreword by Wolfgang Eichhorn)

Multiple Criteria Decision Making G.H. Tzeng,H.F. Wang,U.P. Wen,P.L. Yu,2012-12-06 It was a great honor and privilege to organize the Tenth International Conference on Multiple Criteria Decision Making at Taipei, Taiwan, July 19-24, 1992. Accompanying this unique honor and privilege there was a series of complex, challenging problems. Each of them involved multiple criteria, fuzziness, uncertainty, unknown yet dynamic changes. The problem sometimes cost us sleep because we wanted to do the very best job, but in reality it seemed to be impossible. The following are the main goals of the organization committee: (i) inviting all prominent and distinguished MCDM scholars around the world to participate in the conference and to present their up-to-date research results, (ii) providing financial aid and hospitality so that each invited speaker can have free room and board at a five star hotel, (iii) creating an environment so that all participants can freely exchange their ideas, and build friendships around the world. Due to the enthusiastic participation of the prominent scholars, the generous support of the Taiwan government, universities, the Industrial leaders and nonprofit foundations, and the active problem solving attitude and doing of the organizational committee and the Habitual Domain (HD) club, the conference was a great success.
