*Cuban Music Counterpoints* Marysol Quevedo,2023 This book tells readers: tracing the classical music networks that Cuban composers cultivated between 1940 and 1991 through examining compositions, ensembles, and cultural institutions with a microhistorical approach. It sets the foundation for investigating how aesthetics and politics intersected in the case studies explored throughout the book: individual points of view largely determined the degree to which composers engaged in various local and international artistic networks; and these networks were constantly being nurtured and shaped by their actors, who also had to contend with national and global political and economic circumstances. This chapter provides readers with working definitions of key concepts: modernism, avant-garde, experimentalism, and vanguardia. Key figures Fernando Ortiz and Alejo Carpentier and their contributions to the intellectual milieu that Cuban composers inhabited -especially the concepts of transculturation and lo real maravilloso, respectively-are also discussed. It contextualizes the book within existing scholarship on 20th-century classical music of the Americas, Eastern Europe, and the Cold War, as well as those dealing with Cuban music and Cuban studies more broadly--

**Beaches in Space and Time** Dr. Richard A. Davis Jr.,2015-02-01 Ever wonder, as you stroll along a beach, why the beach is there? Why is it shaped the way it is? What made the sand? Why are there rocks or no rocks? Why do those waves keep rolling in and rolling back out? Why does that delightful breeze shift? How can I keep my umbrella anchored in the sand? This book may not answer that last question, but it will answer all the others, and many more. 'This book by an internationally well-known coastal expert translates science into comprehensible popular language. Readers will especially appreciate the profusion and variety of illustrations from the entire globe.' -- Dr. Ervin G. Otvos, Head Geology Section, Gulf Coast Research Laboratory and Emeritus Professor, Department of Coastal Sciences, University of Southern Mississippi This book explains how beaches originate, what they are made of, and how wind, waves, tides, storms, sea level change, and human development affect them. Includes a section on the most beautiful and interesting beaches in the world--a good many of them in Florida.

*Sandy Beaches as Ecosystems* A. McLachlan,T. Erasmus,2013-04-17 What sight is more beautiful than a high-energy beach facing lines of rolling white breakers? What battleground is more ferocious than where waves and sand meet? What environment could be more exciting to study than this sandy interface between sea and land? And yet how much do we know about sandy beaches? Open sandy beaches are amongst the most neglected fields of scientific study in the coastal environment. This situation exists despite their great extent along most temperate and tropical coastlines and their value as recreational areas and buffer zones against the sea. The traditional oceanographer does not venture into the surf zone while the terrestrial ecologist stops short at the high water mark. Only a few coastal engineers have grappled with the problem of sand and sediment movement as it influences their construction of harbours and pipelines. The marine biologist on the other hand has regarded estuaries, coral reefs and rocky shores, obviously teeming with life, as more fruitful areas for study than the apparently poor animal life on sandy beaches. Sandy beaches have therefore tended to become a scientific no man's land. Over the last decade this situation has begun to improve. Recent work on high-energy beaches has revealed that they may in fact be rich and productive and fertile areas for study. It has even been suggested that beaches and their adjacent surf zones may constitute viable marine ecosystems.
