State of the World 2010 Worldwatch Institute,2013-07-04 Many of the environmental and social problems we face today are symptoms of a deeper systemic failing: a dominant cultural paradigm that encourages living in ways that are often directly counter to the realities of a finite planet. This paradigm, typically referred to as 'consumerism,' has already spread to cultures around the world and has led to consumption levels that are vastly unsustainable. If this pattern spreads further there will be little possibility of solving climate change or other environmental problems that are poised to dramatically disrupt human civilization. It will take a sustained, long-term effort to redirect the traditions, social movements and institutions that shape consumer cultures towards becoming cultures of sustainability. These institutions include schools, the media, businesses and governments. Bringing about a cultural shift that makes living sustainably as 'natural' as a consumer lifestyle is today will not only address urgent crises like climate change, it could also tackle other symptoms like extreme income inequity, obesity and social isolation that are not typically seen as environmental problems. State of the World 2010 paints a picture of what this sustainability culture could look like, and how we can - and already are - making the shift.

Environment, Development and Change in Rural Asia-Pacific John Connell,Eric Waddell,2011-11-15 This volume examines the economic, political, social and environmental challenges facing rural communities in the Asia-Pacific region, as global issues intersect with local contexts. Such challenges, from climatic change and volcanic eruption to population growth and violent civil unrest, have stimulated local resilience amongst communities and led to evolving regional institutions and environment management practices, changing social relationships and producing new forms of stratification. Bringing together case studies from across mainland Southeast Asia and the Island Pacific, an expert team of international contributors reveal how communities at the periphery take charge of their lives, champion the virtues of their own local systems of production and consumption, and engage in the complexities of new structures of development that demand a response to the vacillations of global politics, economy and society. Inherent in this is the recognition that 'development' as we have come to know it is far from over. Each chapter emphasizes the growing recognition that ecological and environmental issues are key to any understanding and analysis of structures of sustainable development. Providing diverse multidisciplinary theoretical and empirical perspectives, Environment, Development and Change in Rural Asia-Pacific makes an important contribution to the revitalization of development studies and as such will be essential reading for scholars in the field, as well as those with an interest in Asia-Pacific studies, economic geography and political economy.
