The Politics of Smallness in Modern Europe Samuël

Kruizinga, 2022-03-24 Rather than simply assuming that some states are small and others are big, *The Politics of Smallness in Modern Europe* delves deep into the construction of different size-based hierarchies in Europe and explores the way Europeans have thought about their own state's size and that of their continental neighbours since the early 19th century. By positing that ideas about size are intimately connected with both basic discourses about a state's identity and policy discourses about the range of options most appropriate to that state, this multi-contributor volume presents a novel way of thinking about what makes one state, in the eyes of both its own inhabitants and those of others, different from others, and what effects these perceived differences have had, and continue to have, on domestic, European, and global politics. Bringing together an international team of historians and political scientists, this nuanced and sophisticated study examines the connections between shifting ideas about a state's (relative) size, competing notions of national interest and mission, and international policy in modern Europe and beyond.

The Toxicology of Fishes Richard T. Di Giulio, David E.

Hinton, 2008-02-25 When looking for a book on fish toxicology, you might find one that discusses the biochemical and molecular aspects, or one that focuses aquatic toxicology in general. You can find resources that cover human and animal toxicology or ecotoxicology in general, but no up-to-date, comprehensive monograph devoted to the effects of chemical pollution on these organisms has been widely available, until now. Filling this void, *The Toxicology of Fishes*, written by recognized experts, covers toxic responses ranging from reduced reproduction and/or abnormal development, growth, and differentiation. General Principles — Discusses fundamental topics such as the bioavailability of chemicals present in the aquatic environment to fishes, processes governing chemical distribution within these organisms, how fish metabolize organic chemicals, and fundamental mechanisms of chemical toxicity Key Target Systems and Organismal Effects — Describes key target organ systems for chemical impacts in fish, how chemicals produce cancer in these animals, and how fishes can develop resistance to chemical toxicity Methodologies and Applications — Covers methods for the assessment of chemical effects on fish such as toxicity tests, biomarkers, simulated ecosystems, and modeling approaches and the use of data from such studies in ecological risk assessments Case Studies — Provides examples of how the principles and approaches presented in earlier units are actually deployed in studies Illustrated by case studies of actual, large-scale field investigations, the book reviews the tools used to assess unwanted effects in laboratory model- and wild fish in detail. With 238 illustrations, 70 tables, and 50 equations, this comprehensive monograph presents detailed information on the bioavailability of chemical pollutants, their distribution, metabolism, and excretion in the host fish and mechanisms and sites of toxic responses.
