Heithaus,2012-04-09 Virtually every area of research associated with sharks and their relatives has been strongly impacted by the revolutionary growth in technology. The questions we can now ask are very different than those reported even two decades ago. American OZ Michael Sean Comerford,2020-07-23 The real traveling carnival is in the pathos behind the scenes. American Oz is a rollicking, gritty, adventurous story of life in the secretive subculture of traveling carnivals. You'll never see your state fair or neighborhood festival the same way again! Comerford writes a bold, inspiring true story of a year working shoulder-to-shoulder with the colorful characters and legends of carnivals. He shares stories of freaks, a carnival pimp, a tramp gold

miner, and the last King of the Sideshows. An insult dunk tank clown is shot. Masked gunmen rob his carnival. And a young showman friend dies on the road. It's a new classic American road story as he hitchhikes to shows in California, New Jersey, New York, Chicago, Alaska, Minnesota, Oklahoma, Texas, Georgia, and Florida where he works in a freak show. He becomes the #1 hitchhiker in the USA and a top agent at the State Fair of Texas. He travels to the lawless foothills of Mexico to see the new face of the American carny. He exposes the truths about immigration, labor abuse, and living between two worlds. Comerford finds carnival people seeking meaning and love in their lives, and the answers always seem to be somewhere down the road.

Persuasive Games Ian Bogost, 2010-08-13 An exploration of the way videogames mount arguments and make expressive statements about the world that analyzes their unique persuasive

power in terms of their computational properties. Videogames are an expressive medium, and a persuasive medium; they represent how real and imagined systems work, and they invite players to interact with those systems and form judgments about them. In this innovative analysis, Ian Bogost examines the way videogames mount arguments and influence players. Drawing on the 2,500-year history of rhetoric, the study of persuasive expression, Bogost analyzes rhetoric's unique function in software in general and videogames in particular. The field of media studies already analyzes visual rhetoric, the art of using imagery and visual representation persuasively. Bogost argues that videogames, thanks to their basic representational mode of procedurality (rule-based representations and interactions), open a new domain for persuasion; they realize a new form of rhetoric. Bogost calls this new form procedural rhetoric, a type of rhetoric tied to the core affordances of computers: running processes and executing rule-based symbolic manipulation. He argues further that videogames have a unique persuasive power that goes beyond other forms of computational persuasion. Not only can videogames support existing social and cultural positions, but they can also disrupt and change these

positions themselves, leading to potentially significant long-term social change. Bogost looks at three areas in which videogame persuasion has already taken form and shows considerable potential: politics, advertising, and learning.
