Timber Booms and Institutional Breakdown in Southeast Asia Michael L. Ross,2001-01-08 Scholars have long studied how institutions emerge and become stable. But why do institutions sometimes break down? In this book, Michael L. Ross explores the breakdown of the institutions that govern natural resource exports in developing states. He shows that these institutions often break down when states receive positive trade shocks - unanticipated windfalls. Drawing on the theory of rent-seeking, he suggests that these institutions succumb to a problem he calls 'rent-seizing' - the predatory behavior of politicians who seek to supply rent to others, and who purposefully dismantle institutions that restrain them. Using case studies of timber booms in Indonesia, Malaysia and the Philippines, he shows how windfalls tend to trigger rent-seizing activities that may have disastrous consequences for state institutions, and for the government of natural resources. More generally, he shows how institutions can collapse when they have become endogenous to any rent-seeking process.

Women and Wildlife Trafficking Helen U. Agu,Meredith L. Gore,2022-03-31 This volume examines women and wildlife trafficking via a collection of narratives, case studies and theoretical syntheses from diverse voices and disciplines. Wildlife trafficking has been documented in over 120 countries around the world. While species extinction and animal abuse are major problems, wildlife trafficking is also associated with corruption, national insecurity, spread of zoonotic disease, undercutting sustainable development investments and erosion of cultural resources, among others. The role of women in wildlife trafficking has remained woefully under-addressed, with scientists and policymakers failing to consider the important causes and consequences of the gendered dimensions of wildlife trafficking. Although the roles of women in wildlife trafficking are mostly unknown, they are not unknowable. This volume helps fill a lacuna by examining the roles and experiences of women with case studies drawn from across the world, including Mexico, Cameroon, the Central African Republic, South Africa and Norway. Women can be wildlife trafficking preventors, perpetrators, and pawns; their roles in facilitating wildlife trafficking are considered from both a supply and a demand viewpoint. The first half of the book assesses the range of science, offering four different perspectives on how women and wildlife trafficking can be studied or evaluated. The second half of the book profiles diverse case studies from around the world, offering context-specific insight about on-the-ground activities associated with women and wildlife trafficking. This book will be of great interest to students and scholars of wildlife crime, environmental law, human geography, conservation, gender studies and green criminology. It will also be of interest to

NGOs and policymakers working to improve efficacy of efforts targeting wildlife crime, the illegal wildlife trade and conservation more broadly.

Parallel and Concurrent Programming in Haskell Simon Marlow, 2013-07-12 If you have a working knowledge of Haskell, this hands-on book shows you how to use the language's many APIs and frameworks for writing both parallel and concurrent programs. You'll learn how parallelism exploits multicore processors to speed up computation-heavy programs, and how concurrency enables you to write programs with threads for multiple interactions. Author Simon Marlow walks you through the process with lots of code examples that you can run, experiment with, and extend. Divided into separate sections on Parallel and Concurrent Haskell, this book also includes exercises to help you become familiar with the concepts presented: Express parallelism in Haskell with the Eval monad and Evaluation Strategies Parallelize ordinary Haskell code with the Par monad Build parallel array-based computations, using the Repa library Use the Accelerate library to run computations directly on the GPU Work with basic interfaces for writing concurrent code Build trees of threads for larger and more complex programs Learn how to build high-speed concurrent network servers Write distributed programs that run on multiple machines in a network

Well Logging for Earth Scientists Darwin V. Ellis, Julian M. Singer, 2008-06-18 The first edition of this book demystified the process of well log analysis for students, researchers and practitioners. In the two decades since, the industry has changed enormously: technical staffs are smaller, and hydrocarbons are harder to locate, quantify, and produce. New drilling techniques have engendered new measurement devices incorporated into the drilling string. Corporate restructuring and the graying of the workforce have caused a scarcity in technical competence involved in the search and exploitation of petroleum. The updated 2nd Edition reviews logging measurement technology developed in the last twenty years, and expands the petrophysical applications of the measurements.

Borehole Acoustic Logging - Theory and Methods Hua Wang, M. Nafi Toksöz, Michael C Fehler, 2020-07-30 This book covers the principles, historical development, and applications of many acoustic logging methods, including acoustic logging-while-drilling and cased-hole logging methods. Benefiting from the rapid development of information technology, the subsurface energy resource industry is moving toward data integration to increase the efficiency of decision making through the use of advanced big data and artificial intelligence technologies, such as machine/deep learning. However, wellbore failure may happen if evaluations of risk and infrastructure are made using data mining methods without a complete understanding of the physics of borehole measurements. Processed results from borehole acoustic logging will constitute part of the input data used for data integration. Therefore, to successfully employ modern techniques for data assimilation and analysis, one must fully understand the complexity of wave mode propagation, how such propagation is influenced by the well, and the materials placed within the well (i.e., the cement, casing, and drill strings), and ultimately how waves penetrate into and are influenced by geological formations. State-of-the-art simulation methods, such as the discrete wavenumber integration method (DWM) and the finite difference method (FDM), are introduced to tackle the numerical challenges associated with models containing large material contrasts, such as the contrasts between borehole

fluids and steel casings. Waveforms and pressure snapshots are shown to help the reader understand the wavefields under various conditions. Advanced data processing methods, including velocity analyses within the time and frequency domains, are utilized to extract the velocities of different modes. Furthermore, the authors discuss how various formation parameters influence the waveforms recorded in the borehole and describe the principles of both existing and potential tool designs and data acquisition schemes. This book greatly benefits from the research and knowledge generated over four decades at the Earth Resources Laboratory (ERL) of the Massachusetts Institute of Technology (MIT) under its acoustic logging program. Given its scope, the book is of interest to geophysicists (including borehole geophysicists and seismologists), petrophysicists, and petroleum engineers who are interested in formation evaluation and cementation conditions. In addition, this book is of interest to researchers in the acoustic sciences and to 4th-year undergraduate and postgraduate students in the areas of geophysics and acoustical physics.

Machine Learning for Subsurface Characterization Siddharth Misra,Hao Li, Jiabo He,2019-10-12 Machine Learning for Subsurface Characterization develops and applies neural networks, random forests, deep learning, unsupervised learning, Bayesian frameworks, and clustering methods for subsurface characterization. Machine learning (ML) focusses on developing computational methods/algorithms that learn to recognize patterns and quantify functional relationships by processing large data sets, also referred to as the big data. Deep learning (DL) is a subset of machine learning that processes big data to construct numerous layers of abstraction to accomplish the learning task. DL methods do not require the manual step of extracting/engineering features; however, it requires us to provide large amounts of data along with high-performance computing to obtain reliable results in a timely manner. This reference helps the engineers, geophysicists, and geoscientists get familiar with data science and analytics terminology relevant to subsurface characterization and demonstrates the use of data-driven methods for outlier detection, geomechanical/electromagnetic characterization, image analysis, fluid saturation estimation, and pore-scale characterization in the subsurface. Learn from 13 practical case studies using field, laboratory, and simulation data Become knowledgeable with data science and analytics terminology relevant to subsurface characterization Learn frameworks, concepts, and methods important for the engineer's and geoscientist's toolbox needed to support

Primate Research and Conservation in the Anthropocene Alison M. Behie,Julie A. Teichroeb,Nicholas Malone,2019-01-31

This book takes a new approach to understanding primate conservation research, adding a personal perspective to allow readers to learn what motivates those doing conservation work. When entering the field over a decade ago, many young primatologists were driven by evolutionary questions centered in behavioural ecology. However, given the current environment of cascading extinctions and increasing threats to primates we now need to ensure that primates remain in viable populations in the wild before we can simply engage in research in the context of pure behavioural ecology. This has changed the primary research aims of many primatologists and shifted our focus to conservation priorities, such as understanding the impacts of human activity, habitat conversion or climate change on primates. This book presents personal narratives alongside empirical research results and discussions of strategies used to stem the tide of extinction. It is a must-have for anyone interested in conservation research.
